**Resource Management in Wireless Networking** Mihaela Cardei, Ionut Cardei, Ding-Zhu Du, 2006-07-06 Following the pattern of the Internet growth in popularity started in the early 1990s the current unprecedented expansion of wireless technology promises to have an even greater effect on how people

communicate and interact with considerable socio economic impact all over the world The driving force behind this growth is the remarkable progress in component miniaturization integration and also developments in waveforms coding and communication protocols Besides established infrastructure based wireless networks cellular WLAN sat lite ad hoc wireless networks emerge as a new platform for distributed applications and for personal communication in scenarios where deploying infrastructure is not feasible In ad hoc wireless networks each node is capable of forwarding packets on behalf of other nodes so that multi hop paths provide end to end connectivity The increased flexibility and mobility of ad hoc wireless networks are favored for applications in law enforcement homeland defense and military In a world where wireless networks become increasingly interoperable with each other and with the high speed wired Internet personal communication systems will transform into universal terminals with instant access to variate content and able of handle demanding tasks such as multimedia and real time video With users roaming between networks and with wide variation in wireless link quality even in a single domain the communications terminal must continue to provide a level of Quality of Service that is acceptable to the user and conforms to a contracted Service Level Agreement

#### **Radio Resource Management Strategies in UMTS**

Jordi Perez Romero, Oriol Sallent, Ramon Agusti, Miguel Angel Diaz-Guerra, 2005-10-31 The key feature of future mobile communication systems is the ability to deliver wideband and high bit rate multimedia services alongside the traditional radio services such as voice messaging and slow rate data The broad range of services expected to be supported can be divided into different Quality of Service QoS classes However the provision of such mobile multimedia services under QoS guarantees will not be possible without a utilization of the air interface resources by means of Radio Resource Management RRM strategies that ensure the target QoS the planned coverage area and that offer a high system capacity Under this framework the book focuses on the RRM concepts including the theoretical background that serves as a basis for the description of specific RRM algorithms The RRM problem for UMTS is presented and more specifically for the FDD mode which is based on a WCDMA scheme More specifically the different aspects that are covered include Introduces the mobile communications sector and UMTS including the evolution towards 4G systems with an overview of the QoS concept which is key for the definition of RRM strategies Offers a detailed description of the radio interface in UMTS as the basis for the implementation of RRM strategies Provides the fundamental concepts related with the development of RRM strategies in WCDMA networks Analyses particular RRM algorithms in a variety of scenarios trying to identify the key parameters and factors that influence their performance Explores the evolution of UMTS towards Beyond 3G systems and the concept of Common RRM in heterogeneous networks with the aid of some algorithm examples This comprehensive title is essential reading for engineers and managers in radio engineering departments of UMTS network operators and UMTS equipment manufacturers It will also prove insightful to researchers in the field of 3G and Beyond 3G systems and academics in any of these areas
