Regional Science In Developing Countries:

Regional Science in Developing Countries Manas Chatterji, Kaizong Yang, 2016-07-27 Developing countries are suffering from the multiple and overlapping problems of poverty malnutrition excessive population growth and also the increased environmental pollution due to rapid industrialization and urbanization particularly in the existing urban centres The migration from rural areas of agricultural population to urban areas is making this situation more problematic The lack of established institutions leads to the failure of public policy no matter how efficiently it is formulated The book discusses the major regional developmental problems in poor countries covering economic social and environmental problems It deals with case studies for a set of individual countries and discusses their unique problems investigating how the established methods of regional science can be used to solve some of these problems Development Studies in Regional Science

Zhenhua Chen, William M. Bowen, Dale Whittington, 2020-02-21 This book examines major policy and planning issues in development studies from the regional science perspective It investigates questions such as How are communities able to deal with uncertainties raised by conflicts technology and external shocks in the process of development How can nations achieve sustainable development in terms of resource allocation and management and How can developing countries improve their economic competitiveness while maintaining the objectives of equitable and coordinated growth among different regions using case studies that focus on different subfields like infrastructure environment data science sustainability and resilience The book is organized in three parts Part I clarifies fundamental issues regarding development studies and regional science in general while Part II includes several case studies that address development related opportunities and challenges with a focus on Asian countries Lastly Part III offers a global perspective and explores development experiences from countries throughout the world Featuring contributions by leading academics and practitioners working at various organizations linked to international development and including multidisciplinary analyses the book appeals to students who are interested in development studies and regional science It also offers planners and policymakers fresh insights into regional economic development **Regional Science: Perspectives for the Future**

Manas Chatterji, 2016-07-27 This book contains up to date original contributions by some of the world's best known experts in the area of urban and regional science Regional science provides the theoretical basis of urban and regional planning The subject covers such topics as regional development regional accounts spatial price computation regional and interregional knowledge networks and measurement of regional quality of life A considerable amount of change has taken place in the spatial pattern of socio economic activities and their interactions over the last half of the century leading to the need for more advanced tools of analysis in regional science This book fulfils this need Management and Regional Science for Economic Development Manas Chatterji, 2012-12-06 The greatest challenge facing mankind today is the immense disparity in the levels of income among people in different parts of the globe The growth rate of income of the poor countries is

consistently far below the rate of the advanced industrialized nations Due to low income and a high propensity to consume there is very little left in these countries for investment A major portion of the resources available is devoted to military expenditures This continual decline in the standard of living coupled with poverty and unemployment will lead to social and political upheaval in these countries which affects developed countries Because of high capacity and low population growth the market of the developed countries is already saturated To maintain the high standard of living in the developed countries it is necessary to have a strong and stable developing world It is gratifying to see that both groups of countries see the need for peaceful economic growth however the amount of cooperation between countries and the material help from the developed countries are far from satisfactory The economic and social scientists have investigated the best way to achieve the transformation from a poverty ridden condition to a decent existence Their studies have proceeded in two different directions One is a more descriptive historical analysis and the other is theoretical model building Although these studies have achieved a relatively high level of perfection one significant factor is sometimes missing

Environment, Regional Science and Interregional Modeling M. Chatterji, P. van Rompuy, 2012-12-06 This second volume of proceedings of the International Conference on Regional Science Energy and Environment Louvain May 1975 contains papers related to general and partial equilibrium models of regional and urban development in which natural and human resources play a dominant role It need not be stressed that environmental factors and resource management have to some extent been neglected in postwar economic research Unfortunately a world wide energy crisis or more local environmental disruptions were necessary to draw the economist's attention on the increasing imbalance between man and environment The topics treated in this volume reflect the shift in economic research which has taken place since the early seventies They can be classified roughly into 4 fields The first field deals with a welfare approach to environmental deterioration The second area covers models of resource allocation that contain environmental constraints The third class of problems focuses on the relationship between environment and urban development Finally some methodological papers are included that explore new areas in regional and interregional model building Klaassen opens this volume with a paper on the impact of rising energy prices on the structure of regional development and environment He analyses the change in size of all potentials and the consequent decrease in the volume of traffic Besides these short run influences a reallocation of

households and firms may be expected in the long run

Energy, Regional Science and Public Policy M. Chatterji, P. van Rompuy, 2012-12-06 For the last three decades space has become a significant dimension in social science analysis In many developed countries economic growth is slowing down and in some cases restrained due to environmental considerations and the real question is the optimum spread of development over space rather than the growth over time In the developing countries limited and uneven distribution of population and resources and the existence of heterogeneous groups highlighted the need of balanced regional development The energy crisis and the realization that energy resources are very limited and unequally distributed have further emphasized its importance The expected impact and relocation due to energy shortages will have a crucial spatial dimension since manufacturing and service activities dependent on energy are concentrated in a few metropolitan regions connected by transportation communication and cultural factors Regional environment is also dependent on the spatial juxtaposition of activities and energy use The papers included in this volume address some of these considerations They were presented in the International Conference on Regional Science Energy and Environment held at Katholieke Universiteit te Leuven Belgium on May 1975 A second volume titled Environment Regional Science and Interregional Modeling published also by Springer Verlag contains research papers related to environment and space This book does not concern all facets of the energy situation In fact contributions on major oil producing countries U S S R East

European and developing countries are not represented

Principles of Regional Science Zheng Wang, 2017-10-17 This book summarizes the research findings in regarding a region as a rational and abstract concept and explores the principles of regional science Focusing on location theory spatial dynamics and regional evolution theory it stresses that the region as a scientific concept is an essential abstract of an economic entity of a place While it introduces a number of case studies the content is general and universal rather than specific Beginning with location theory the basis of regional science it explains how regions breed their own characteristics as economic entities against a background of place For example it discusses the location theory of the tourism industry and analyzes issues of facility location and R D industry location theory The second part of the book addresses interactions with the spatial dynamics including the dynamic mechanism of regions against a background of space Spatial dynamics which includes concepts from statistical physics provides insights into the dynamic mechanism of aggregation diffusion and industrial clustering in regional science as well as in geography and economics The book then describes regional dynamics as a development of spatial dynamics REGION is completely independent as a research object and is no longer part of spatial dynamics This book also discusses in detail regions as the dynamic characteristics of the economy or the basic characteristics of a certain place and examines the theory of regional evolution It argues that regions are evolution and irreversible features of development with path dependence which are the characteristics of a region that differ from general economic phenomena This book by Professor Zheng Wang is outstanding Its focus on Regional Science will open this area up to a wide variety of theoretical and applied researchers I recommend the work without reservations It covers critically important principles in the field and should be read and used by students faculty and applied researchers doing policy analysis I can see this as an important handbook and reference work as well as a textbook in the field Kingsley Haynes

Tool Kits in Regional Science Michael Sonis, Geoffrey J. D. Hewings, 2009-06-29 Regional Science is now more than 50 years old in the last two decades significant advances in methodology have occurred spurred in large part by access to computers The range of analytical techniques now available is enormous this books provides a sampling of the toolkit that is now at the disposal of analysts interested in understanding and interpreting the complexity of the spatial structure of sub national economies The set of tools ranges from the more traditional input output to new developments in computable general equilibrium models nonlinear dynamics neural modelling and innovation

Practices in Regional Science and Sustainable Regional Development R. B. Singh, Soumendu Chatterjee, Mukunda Mishra, Andrews José de Lucena, 2021 This book brings together the emerging trends and techniques incorporated in regional science during the first two decades of this millennium The book includes systematic and analytical notes making scientific commentary on the innovative methods of regional development measurement of the development regional development models and policy measures that have significant implications and wide applicability instrumental for India as well as the other global south countries There is clear evidence in the global south of the uneven spatial distribution of resources

economic activities literacy and health conditions The most striking fact is the coexistence of development and underdevelopment that makes the planning process complicated This can hardly be explored without taking a deep insight into the matter of how the regional parameters are impacting regional society or economy to shape the development of that region There can be no effective global policy framework that will be effective equally for each and every region to mitigate local issues of society or economy It is here that the book integrates the efforts of practitioners working towards addressing these regional issues and striving for sustainable regional development through their innovative ideas Through its contributions the book addresses development issues regional impact of climate change social justice migration well being livelihood vulnerabilities and regional urban environmental issues from the standpoint of regional science It is a significant resource for researchers of spatial science and policy makers
