Regulating Utilities With Management Incentives A Strategy For Improved Performance:

Regulating Utilities with Management Incentives Kurt A. Strasser, Mark Kohler, 1989-12-11 This book proposes a new approach to the government regulation of utilities Arguing that traditional command and control regulation does not encourage efficient performance Strasser and Kohler advocate the use of an incentive based regulatory system and offer a practical realistic strategy for the successful implementation of such plans within the context of utility regulation The analysis is supported by a comprehensive survey of the relevant legal materials an overview of the literature on organization theory and institutional economics and a survey of the latest thinking on how incentives can most effectively be paid Strasser and Kohler begin by identifying problems associated with current regulatory techniques demonstrating that disincentives are often built into the regulatory system When that system has tried incentives the authors show they have been applied in an ad hoc manner further exacerbating the problem In presenting the case for incentive based regulation the authors review the history of comprehensive incentive plans look at what organization theory can teach us about using incentives as a regulatory strategy and explore the effective use of incentive compensation by nonregulated companies Strasser and Kohler then develop a strategy for implementing incentive plans in regulated utilities showing that in order to work the plans must include the installation of clearly defined bonuses and penalties specific standards of performance the payment of bonuses to managers rather than shareholders and reliable and complete measures of company performance Policymakers economists public utility regulators and attorneys involved in the complex arena of utility regulation will find Regulating Utilities with Management Incentives indispensable reading **Incentive Regulation in the Electric Utility Industry** ,1983

Regulation of Network Utilities Claude Henry, Michel Matheu, Alain Jeunemaître, 2001 Propelled by deep technical economic and cultural changes network utilities have in the last twenty years entered a new era Since competition has been widely introduced and promoted we have experienced a radical change in the structure of the industries and the role of the state authorities Their role in managing monopolies has evolved into regulating new forms of markets which has resulted in the creation of independent regulatory authorities These new public bodies work with governments to try and reconcile the needs of competition and public service

missions This suggests the use of recent developments in economic theory to handle complex problems This volume offers an exploration by scholars and regulators of the new regulatory regimes across Europe The first part presents the pioneering experiences of the United Kingdom and Sweden The United Kingdom has quickly chosen to establish powerful and independent individual regulators Reforms in Sweden have been more gradual and regulators have in the first instance acted mainly as mediators Part two is devoted to second wave developments that took place in various European countries i e France Germany Italy and Spain countries where the legal tradition is less conducive to the concept of independent regulators There the regulators are often but not always less powerful and meet more obstacles in their efforts to prevent either the formation of oligopolies or the resistance of incumbent monopolies In Germany another problem has emerged as the federal tradition prevents the creation of independent regulators in certain key sectors The contributions in the third part of the volume throw some light on the problems of coordinating national regulations One can observe the continuous emergence of modes of cooperation between national regulators as well as European authorities Faced with certain categories of problem the European authorities are themselves led to act as common regulators The countries of central and eastern Europe which are progressively converging towards the general economic model of the West are more and more concerned with the accompanying regulation problems Last but not least the Internet raises worldwide problems of regulation that are beginning to be seriously considered

Incentive Regulation and the Regulation of Incentives Glenn Blackmon, 2012-12-06 The class is theory of price regulation assumed that the regulator knows the firm's costs the key piece of information that enables regulators to pressure firms to choose appropriate behaviors The regulatory problem was reduced to a mere pricing problem the regulator's goal was to align price with marginal cost subject to the constraint that revenues must cover costs Elegant and important insights ensued The most important was that regulation was inevitably a struggle to achieve second best outcomes Ramsey pricing was a splendid example Reality proved harsh to regulatory theory The firm's costs are by no means known to the regulator At best the regulator may know how much is currently spent to provide services but hardly what costs would be if the firm vigorously pursued efficiency Even if the current cost curve were known to the regulator technologies change so swiftly that today's costs are a very poor indicator of tomorrow's and those are the costs that will determine the firm's future decisions With the burgeoning attention to information considerations and game theory in economics the regulator's problem of eliciting host information about cost has received considerable attention In most cases however it has been in context that are both static and stylized such analyses rarely capture many of the essential elements of real world regulatory issues This volume represents a fresh approach It reflects Glenn Blackmon's twin strengths a keen analytic mind and important experience in the regulatory arena
