Regulatory Choices A Perspective On Developments In Energy Policy:

Regulatory Choices Richard J. Gilbert, 1991-01-01 *Regulatory Choices* offers the first comprehensive economic history of energy policy and its consequences for California where some of the most innovative and far ranging programs of regulatory reform have originated The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis This book will serve for years to come as an invaluable reference on the costs and effects of various energy policies With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer the first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to respond to economic and environmental concerns The problems of energy supply occupy the second part of the book which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts as well as a case study of the construction of the Diablo Canyon nuclear power plant The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation

Regulators we learn have a mixed record when it comes to managing the production of energy Some conservation programs have enjoyed considerable economic success particularly those that correct a lack of consumer information Others such as the renewable energy tax credits or programs designed to subsidize new technologies have cost much more than the value of the energy they have saved What emerges clearly from this study is that regulated industries are not immune from the forces of competition

Energy Antitrust Handbook, 2009 This Second edition of the *Energy Antitrust Handbook* presents a guide to an industry of increasing importance to the U S economy It is written to assist energy regulatory and antitrust lawyers in understanding the multilayered complexity of this field by providing a basic background on antitrust issues in the energy industry

Energy Antitrust Handbook Donald E. Hardy, 2002 The *Energy Antitrust Handbook* presents a guide to an industry of increasing importance to the U S economy The Handbook is designed to assist energy regulatory and antitrust lawyers in understanding the multilayered complexity of this field Historically energy has been at the center of the development of the antitrust laws The oil industry for example has been the source of many seminal antitrust cases while the electric and natural gas industries were considered to be the province of regulation However competition began to enter these two industries and develop particularly in the late 1980s and 1990s This book provides a basic background of the history and economic structure of electricity and gas and the applicable regulatory structure In addition it explains the application of antitrust laws to these industries both by the courts and the agencies particularly the Federal Energy Regulatory Commission FERC The *Energy Antitrust Handbook* also offers insight on how the past may be a prologue for issues that are currently in flux and reflects the greater attention being given to electricity issues by the courts and federal agencies Lawyers familiar with antitrust will gain an understanding of gas and electricity product issues the market structure

and the unique application of the antitrust laws to these industries Lawyers and executives familiar with these industries but not with antitrust law will find this book provides both basic as well as pervasive coverage of the antitrust laws applicable to energy

Political Opportunities for Climate Policy Roger Karapin, 2016-04-15 This book examines the causes of effective climate policies in the US through statistical analysis and three longitudinal case studies

Privatization, Restructuring, and Regulation of Network Utilities David M. G. Newbery, 1999 David Newbery argues that network utilities pose special problems of ownership and regulation

Energy Technology Innovation Arnulf Grubler, Charlie Wilson, 2014 An edited volume on factors determining success or failure of energy technology innovation for researchers and policy makers

Explorations in Specialized Genres Vijay Kumar Bhatia, Maurizio Gotti, 2006 Genre analysis has become firmly established as one of the most popular frameworks for the study of specialized genres in academic professional and institutional as well as other workplace contexts In recent years genre theory has also developed in the direction of a more comprehensive and powerful multi dimensional and multi perspectived framework to examine not only the text but also the context in a much more meaningful manner than had ever been done earlier The theoretical perspectives and the individual case studies of this volume testify to the wide range of methodological tools made available by genre theory enabling researchers to handle problems relating to the description of variations in language use Moreover the following relevant issues are addressed how are specialized genres constructed interpreted and exploited in the achievement of specific goals in highly specialized contexts

The Journal of Energy and Development, 2003

Academic Discourse Across Disciplines Ken Hyland, Marina Bondi, 2006 This volume reflects the emerging interest in cross disciplinary variation in both spoken and written academic English exploring the conventions and modes of persuasion characteristic of different disciplines and which help define academic inquiry This collection brings together chapters by applied linguists and EAP practitioners from seven different countries The authors draw on various specialised spoken and written corpora to illustrate the notion of variation and to explore the concept of discipline and the different methodologies they use to investigate these corpora The book also seeks to make explicit the valuable links that can be made between research into academic speech and writing as text as process and as social practice
