Regulatory Models For The Online World:

Regulatory Models for the Online World Rolf Weber, 2002-10-03 Global networks have become a major political economic and legal topic in discussions among the participants of the global community Around the world governments legal scholars and practitioners are in the process of developing theories in respect of the regulation of the online world These attempts are usually based on a given national legal culture this approach however underestimates the importance of an umbrella concept The purpose of this study accordingly consists in the comparative discussion of basic regulatory models traditional government regulation international agreements self regulation code based regulation and in the evaluation of their merits related to different topics that play a role in the online world market entry access infrastructure stability intellectual property privacy bad content etc An easy solution is obviously not possible however a detailed examination on a comparative legal basis can give some insights for future regulatory initiatives

Regulatory Models for the Online World Rolf H.

Weber, 2002-01-01 **Multi-stakeholder Governance and the Internet Governance Forum** Jeremy Malcolm, 2008 Multi stakeholder governance is a fresh approach to the development of transnational public policy bringing together governments the private sector and civil society in partnership The movement towards this new governance paradigm has been strongest in areas of public policy involving global networks of stakeholders too intricate to be represented by governments alone Nowhere is this better illustrated than on the Internet where it is an inherent characteristic of the network that laws and the behaviour to which those laws are directed will cross national borders resulting not only in conflicts between national regimes but also running up against the technical and social architecture of the Internet itself In this book Jeremy Malcolm examines the new model of multi stakeholder governance for the Internet regime that the Internet Governance Forum IGF represents He builds a compelling case for the reform of the IGF to enable it to fulfil its mandate as an institution for multi stakeholder Internet governance Provided by publisher

Researching Internet Governance Laura Denardis, Derrick

Cogburn, Nanette S. Levinson, Francesca Musiani, 2020-09-08 Scholars from a range of disciplines discuss research methods theories and conceptual approaches in the study of internet governance The design and governance of the internet has become one of the most pressing geopolitical issues of our era The stability of the economy democracy and the public sphere are wholly dependent on the stability and security of the internet Revelations about election hacking facial recognition technology and government surveillance have gotten the public's attention and made clear the need for scholarly research that examines internet governance both empirically and conceptually In this volume scholars from a range of disciplines consider research methods theories and conceptual approaches in the study of internet governance

Internet

Governance Roy Balleste, 2015-03-06 Internet Governance Origins Current Issues and Future Possibilities deals with Internet governance and includes computer history Internet beginnings institutions and stakeholders proposed models of governance and human rights The concept of Internet governance covers an exceptionally complex and rapidly changing field

of norms and rules Its origins and conflicts engage many disciplines and give rise to technical standards with contributions from a wide range of stakeholders At the same time the Internet has increasingly become the dominant reality for all the information processing industries The ultimate goal of the book is to establish a foundation for identifying a new model of governance for the Internet In doing so the book honors the efforts of previous scholars who have considered and proposed other models for the governance of the Internet Among its aims the book is intended as an introduction for the novice to the subject of internet governance The first two chapters offer a historical foundation of the institutions and the debate The next two chapters discuss the evolution of that debate over the last twenty years The final two discuss the present and future ramifications of the debate and include the author s attempts to sketch a practical plan for a new concept of Internet governance This book provides an introductory multidisciplinary account of the forces at work in the evolving concept of internet governance for scholars in the information studies fields including computer information and library science It should also be useful for scholars in the fields of international law international relations diplomacy studies and political science

Internet of Things Rolf H. Weber,Romana Weber,2010-06-10 The Internet of Things as an emerging global Internet based information architecture facilitating the exchange of goods and services is gradually developing While the technology of the Internet of Things is still being discussed and created the legal framework should be established before the Internet of Things is fully operable in order to allow for an effective introduction of the new information architecture If a self regulatory approach is to be adopted to provide a legal framework for the Internet of Things and this seems preferable rulemakers can draw on experiences from the current regime of Internet governance In the near future mainly businesses will operate in the Internet of Things Civil society is only expected to make use of the Internet of Things as it now does of the Internet at a later stage e g for healthcare The Internet of Things will have an impact in various areas The regulatory framework must provide for provisions ensuring the security of the structure as well as the privacy of its users Furthermore legal barriers that may stand in the way of the coming into operation of the Internet of Things will have to be considered However the Internet of Things will also have positive effects in different fields such as the inclusion of developing countries in global trade the use of search engines to the benefit of civil society combating product counterfeiting tackling environmental concerns improving health conditions securing food supply and monitoring compliance with labor standards

The Immersive Internet R. Teigland,D. Power,2013-03-25 Collecting short thought pieces by some of the leading thinkers on the emerging Immersive Internet Power and Teigland s book questions what a more immersive and intimate internet based on social media augmented reality virtual worlds online games 3D internet and beyond might mean for society and for each of us

Internet and Surveillance Christian Fuchs,Kees Boersma,Anders Albrechtslund,Marisol Sandoval,2013-06-17 The Internet has been transformed in the past years from a system primarily oriented on information provision into a medium for communication and community building The notion of Web 2.0 social software and social networking sites such as Facebook

Twitter and MySpace have emerged in this context. With such platforms comes the massive provision and storage of personal data that are systematically evaluated, marketed and used for targeting users with advertising. In a world of global economic competition, economic crisis and fear of terrorism after 9/11, both corporations and state institutions have a growing interest in accessing this personal data. Here contributors explore this changing landscape by addressing topics such as commercial data collection by advertising, consumer sites and interactive media, self-disclosure in the social web, surveillance of file sharers, privacy in the age of the internet, civil watch, surveillance on social networking sites and networked interactive surveillance in transnational space. This book is a result of a research action launched by the intergovernmental network COST European Cooperation in Science and Technology.

Handbook of Transnational Economic Governance Regimes
Christian Tietje, Alan Brouder, 2009-10-14

Non-governmental organizations, transnational business associations, private standard setting bodies, public-private partnerships and institutionalized incentive schemes now occupy a central place in the regulation and governance of transnational economic affairs alongside states and intergovernmental organizations. Much of the literature on these new and emerging patterns of governance has focused on the legal, political and normative implications of this rapidly evolving landscape. The *Handbook of Transnational Economic Governance Regimes* expands on this scholarship by identifying, describing and analysing more than 85 of the most significant actors in transnational governance. The *Handbook* examines the origins, evolution, structure, membership, financing and strategies of key organizations and regulatory networks in almost every sphere of global economic activity and analyses their role and influence in contemporary transnational economic governance.

Deconstructing Digital Capitalism and the Smart Society
Mel van Elteren, 2025-01-01

Today's critics of big online platforms tend to consider privacy breaches, monopolistic practices and the deployment of surveillance technologies as the main problems. Internet reformers suggest the answers to these issues reside in more and better regulations. While the questions of privacy, data and size are indeed important, they are secondary, however, to a deeper set of concerns about platform ownership and control and who benefits from the current status quo. This book examines these issues and offers an historical overview and in-depth analysis of digital capitalism and its prevailing practices as it has become increasingly intertwined with various forms of online surveillance, behavior modification and the delegation of managerial functions to algorithmic and automated systems in platform economies. The approach taken extends to the wider array of data-driven, internet-connected and automated systems that involve digital devices and technologies centered on three smart spaces: the smart self, the smart home and the smart city. Antitrust and other regulatory measures by the European Union and the United States that are aimed at restraining platform capitalism are also discussed. The focus in particular is on recent developments regarding artificial intelligence and their potentially harmful implications. This is followed by a critical look at proposals for more far-reaching institutional reforms revolving around the creation of forms of platform socialism that build partly on existing practices of platform cooperativism. The book

concludes with a diagnosis of the global situation among the competing digital empires the United States the European Union and China and considers whether or not under the present conditions any form of democratic platform socialism could materialize on a wider scale in the near future **Internet Governance at the Point of No Return** Rolf H.

Weber,2021-04-14 The book begins with an analysis of the technological infrastructure environment and of the manifold regulatory theories developed in the Internet Governance context Based on this foundation the transnational normative ecosystem is outlined followed by a detailed discussion of the substantive Internet Governance principles such as legitimacy participation transparency accountability These considerations lead to the presentation of relevant international legal concepts duty of co operation global public goods shared spaces due diligence State responsibility that merit more attention The outlook proposes potential approaches for improving the future of the Internet Governance design *Television without frontiers?* Great Britain: Parliament: House of Lords: European Union Committee,2007-02-05 The draft Audiovisual Media Services AMS Directive published in December 2005 was met with some alarm It sought to extend the existing Television without Frontiers Directive to new services which were seen to be competing for audience and revenue In doing so it would have introduced inappropriate regulation on the new media sector There have now been some changes to the original draft and a tightening of the definition of television like services Although an improvement the Committee is concerned that there is still not enough legal certainty They are also worried about the need to defend the Country of Origin approach to single market legislation and reject the idea that regulators should act to preserve the market dominance of existing players from new entrants They are also unconvinced of the need for any quantitative restriction on advertising **Classification of**

Services in the Digital Economy Rolf H. Weber,Mira Burri,2012-09-20 The classification of services in the digital economy proves critical for doing business but it appears to be a particularly complex regulatory matter that is based upon a manifold set of issues In the context of the General Agreement on Trade in Services GATS when the services classification scheme was drafted in the early 1990s convergence processes had not unfolded yet and the internet was still in its infancy and not a reality in daily life Therefore policy makers are now struggling with the problem of regulating trade in electronic services and are in search of a future oriented solution for classifying them in multilateral and preferential trade agreements In late fall 2011 the authors of this study were mandated by the European Union Delegation to Vietnam in the context of the Multilateral Trade Assistance Project 3 MUTRAP 3 to work out a report clarifying the classification of services in the information digital economy and to assess the impact of any decision regarding the classifications on the domestic and external relations policy of Vietnam as well as to discuss the relevant issues with local experts during three on site visits

Realizing a New Global Cyberspace Framework Rolf H. Weber,2014-09-23 In many respects cyberspace has created a new world The online phenomena encompass social cultural economic and legal facets Exceeding the present Internet Governance concept the book analyses the normative foundations and guiding principles of a global cyberspace regime that

includes the exchange of people businesses governments and other entities Based on this assessment and philosophical theories the book attempts to outline a model for a general legal framework enshrining key principles of civil society such as human rights ethics The proposed global framework not in the form of a multilateral treaty but a morally convincing declaration could then be complemented by additional polycentric regulations with binding effect developed on the basis of multistakeholder participation in a multi layer concept

Handbook of Research on Examining Cultural Policies Through Digital Communication Önay Dogan, Betül, Gül Ünlü, Derya, 2018-11-09 Culture is one of the most important elements for explaining individuals behaviors within the social structure It meets the various social needs of members of a society by directing how individuals must react to various events and how to act in specific circumstances A planned and systematic process is required for disseminating this cultural accumulation as a policy which is produced collectively by all members within their everyday life practices The Handbook of Research on Examining Cultural Policies Through Digital Communication provides emerging research on this aspect of cultural policy which is formed within the framework of this systematic process in a strategic manner and can be defined as various activities of the state intended for art human sciences and cultural inheritance Creating such cultural policies involves the establishment of measures and organizations required for the development of each individual providing economic and social facilities all of which are actions intended for directing society Featuring coverage on a broad range of topics such as long distance education digital citizenship and public diplomacy this book is ideally designed for academicians researchers advanced level students sociologists international and national organizations and government officials

Cyber-Attacks and the Exploitable Imperfections of International Law Yaroslav Radziwill, 2015-07-28 At its current rate technological development has outpaced corresponding changes in international law Proposals to remedy this deficiency have been made in part by members of the Shanghai Cooperation Organization led by the Russian Federation but the United States and select allies have rejected these proposals arguing that existing international law already provides a suitable comprehensive framework necessary to tackle cyber warfare Cyber Attacks and the Exploitable Imperfections of International Law does not contest and in fact supports the idea that contemporary jus ad bellum and jus in bello in general can accommodate cyber warfare However this analysis argues that existing international law contains significant imperfections that can be exploited gaps not yet filled that fail to address future risks posed by cyber attacks

Search Engine Freedom Joris van Hoboken, 2012-10-01 In this book the author explores how search media can be incorporated into freedom of expression doctrine as well as media and communications law and policy more generally And the book develops a theory of the legal relations between national governments and search media providers on the one hand and between end users and information providers on the other Among the many issues covered are the following role of government under the right to freedom of expression lack of transparency about the ranking and selection of search results search engine and ISP intermediary liability filtering by access providers freedom of

expression and the governance of public libraries the search engine market its business model and the separation rule for advertising search engine self regulation user profiling and personalization decisions and actions for which search engines should be able to claim protection The analysis draws on specific legal developments under Article 10 of the European Convention on Human Rights and the United States First Amendment and investigates issues of diversity pluralism and freedom of expression as they relate to editorial control in other media The author concludes with recommendations regarding search engine governance and the proper role of government indicating which existing elements of the regulatory framework for search media can be improved and offering directions for future legal and empirical research Considering the ever growing cultural political and economic importance of the Internet and the World Wide Web in our societies and the societal interests involved in the availability of effective search tools this first in depth legal analysis of search engine freedom will prove indispensable to the many practitioners and policymakers concerned with freedom of expression in the digital age

Digital Empires Anu Bradford, 2023-08-28 Financial Times Best Books of 2023 in Economics The global battle among the three dominant digital powers the United States China and the European Union is intensifying All three regimes are racing to regulate tech companies with each advancing a competing vision for the digital economy while attempting to expand its sphere of influence in the digital world In Digital Empires her provocative follow up to The Brussels Effect Anu Bradford explores a rivalry that will shape the world in the decades to come Across the globe people dependent on digital technologies have become increasingly alarmed that their rapid adoption and transformation have ushered in an exceedingly concentrated economy where a few powerful companies control vast economic wealth and political power undermine data privacy and widen the gap between economic winners and losers In response world leaders are variously embracing the idea of reining in the most dominant tech companies Bradford examines three competing regulatory approaches the American market driven model the Chinese state driven model and the European rights driven regulatory model and discusses how governments and tech companies navigate the inevitable conflicts that arise when these regulatory approaches collide in the international domain Which digital empire will prevail in the contest for global influence remains an open question yet their contrasting strategies are increasingly clear Digital societies are at an inflection point In the midst of these unfolding regulatory battles governments tech companies and digital citizens are making important choices that will shape the future ethos of the digital society Digital Empires lays bare the choices we face as societies and individuals explains the forces that shape those choices and illuminates the immense stakes involved for everyone who uses digital technologies

Currents of Archival Thinking Terry Eastwood, Heather MacNeil, 2009-12-21 Currents of Archival Thinking explores key topics in the theory and practice of archival studies within three frameworks 1 the foundational concepts of the discipline 2 the main components of the archival mission and 3 the metaphors that shape how we think about archives and archival institutions Each essay will explore a given topic from both a historical and contemporary perspective with contributors drawn from

Europe Australia Canada and the United States and featuring a mix of academics and practitioners **Cybercrime and Cloud Forensics: Applications for Investigation Processes** Ruan, Keyun, 2012-12-31 While cloud computing continues to transform developments in information technology services these advancements have contributed to a rise in cyber attacks producing an urgent need to extend the applications of investigation processes Cybercrime and Cloud Forensics Applications for Investigation Processes presents a collection of research and case studies of applications for investigation processes in cloud computing environments This reference source brings together the perspectives of cloud customers security architects and law enforcement agencies in the developing area of cloud forensics
