

Замкнутая система управления

Closed Loop Control

The Closed Loop Control System controls converter feed-gas content by keeping the A/F mixture modulated around the "ideal" ratio.

Центр системы управления токсичности это замкнутая система управления подачи топлива. Она отвечает за контроль над количеством преобразованного газа в катализаторе и, конечно же, определяет какое количество CH, CO и NO_x покинет выпускную систему. Управление по замкнутому контуру включено только на холостом ходу и установившихся режимах и проводит регулировку времени впрыска на базе сигнала датчика кислорода. При включенной системе ЗБУ поддерживает топливовоздушную смесь в районе стехиометрической 14.7 к 1. Точной регулировкой подачи топлива количество кислорода в отработавших газах поддерживается на уровне достаточном для эффективной работы 3-х компонентного катализатора. В тоже время, если лямбда начинает выходить за рамки запрограммированных параметров, эффективность катализатора резко снижается, особенно восстановление NO_x.
