Fibre Reinforced Concrete: From Design to Structural Applications FIB - International Federation for Structural Concrete, 2020-08-01 The first international FRC workshop supported by RILEM and

ACI was held in Bergamo Italy in 2004 At that time a lack of specific building codes and standards was identified as the main inhibitor to the application of this technology in engineering practice The workshop aim was placed on the identification of applications guidelines and research needs in order for this advanced technology to be transferred to professional practice The second international FRC workshop held in Montreal Canada in 2014 was the first ACI fib joint technical event Many of the objectives identified in 2004 had been achieved by various groups of researchers who shared a common interest in extending the application of FRC materials into the realm of structural engineering and design The aim of the workshop was to provide the State of the Art on the recent progress that had been made in term of specifications and actual applications for buildings underground structures and bridge projects worldwide The rapid development of codes the introduction of new materials and the growing interest of the construction industry suggested presenting this forum at closer intervals In this context the third international FRC workshop was held in Desenzano Italy four years after Montreal In this first ACI fib RILEM joint technical event the maturity gained through the recent technological developments and large scale applications were used to show the acceptability of the concrete design using various fibre compositions The growing interests of civil infrastructure owners in ultra high performance fibre reinforced concrete UHPFRC and synthetic fibres in structural applications bring new challenges in terms of concrete technology and design recommendations In such a short period of time we have witnessed the proliferation of the use of fibres as structural reinforcement in various applications such as industrial floors elevated slabs precast tunnel lining sections foundations as well as bridge decks We are now moving towards addressing many durability based design requirements by the use of fibres as well as the general serviceability based design However the possibility of having a residual tensile strength after cracking of the concrete matrix requires a new conceptual approach for a proper design of FRC structural elements With such a perspective in mind the aim of FRC2018 workshop was to provide the State of the Art on the recent progress in terms of specifications development actual applications and to expose users and researchers to the challenges in the design and construction of a wide variety of structural applications Considering that at the time of the first workshop in 2004 no structural codes were available on FRC we have to recognize the enormous work done by researchers all over the world who have presented at many FRC events and convinced code bodies to include FRC among the reliable alternatives for structural applications This will allow engineers to increasingly utilize FRC with confidence for designing safe and durable structures Many presentations also clearly showed that FRC is a promising material for efficient rehabilitation of existing infrastructure in a broad spectrum of repair applications These cases range from sustained gravity loads to harsh environmental conditions and seismic applications which are some of the broadest ranges of applications in Civil Engineering The workshop was attended by researchers designers owner and government representatives as well as participants from the construction and fibre industries The presence of people with different expertise provided a unique opportunity to share knowledge and promote collaborative efforts These interactions

are essential for the common goal of making better and sustainable constructions in the near future The workshop was attended by about 150 participants coming from 30 countries Researchers from all the continents participated in the workshop including 24 Ph D students who brought their enthusiasm in FRC structural applications For this reason the workshop Co chairs sincerely thank all the enterprises that sponsored this event They also extend their appreciation for the support provided by the industry over the last 30 years which allowed research centers to study FRC materials and their properties and develop applications to making its use more routine and accepted throughout the world Their important contribution has been essential for moving the knowledge base forward Finally we appreciate the enormous support received from all three sponsoring organizations of ACI fib and Rilem and look forward to paving the path for future collaborations in various areas of common interest so that the developmental work and implementation of new specifications and design procedures can be expedited internationally

Fibre-reinforced concrete:From design to structural applications FIB - Féd. Int. du Béton,2016 The FRC 2014 Workshop Fibre Reinforced Concrete from Design to Structural Applications was the first ACI fib joint technical event The Workshop held at Polytechnique Montreal Canada on July 24th and 25th 2014 was attended by 116 participants from 25 countries and 4 continents The first international FRC workshop was held in Bergamo Italy in 2004 At that time the lack of specific building codes and standards was identified as the main inhibitor to the application of this technology in engineering practice Ten years after Bergamo many of the objectives identified at that time have been achieved The use of fibre reinforced concrete FRC for designing structural members in bending and shear has recently been addressed in the fib Model Code 2010 Steel fibre reinforced concrete SFRC has also been used structurally in several building and bridge projects in Europe and North America SFRC has been widely used in segmental tunnel linings all over the world Members of ACI544 and fib TG 4.1 have been involved in writing code based specifications for the design of FRC structural members More than fifty papers were presented at the Workshop from which forty four were selected for this joint ACI fib publication The papers are organised in the document under six themes Design guidelines and specifications Material properties for design Behaviour and design of beams and columns Behaviour and design of slabs and other structures Behaviour and design of foundations and underground components and finally Applications in structure and underground construction projects

Bond and anchorage of embedded reinforcement: Background to the fib Model Code for Concrete Structures 2010 fib - Fédération internationale du béton,2014-05-01 As part of the preparation for the fib Model Code for Concrete Structures 2010 task group 4.5 Bond Models undertook a major review of rules for bond and anchorage of reinforcement in the CEB FIP Model Code 1990 This bulletin presents the outcome of that review describes the rationale for the revisions and presents the evidence on which the revisions are based The principle changes in MC2010 include raising the limit on concrete strength that may be used when determining bond resistance to 110MPa introduction of a coefficient 4 to cater for different reinforcement Classes and coverage of new construction materials including epoxy coated and headed

bars The format of design rules has been changed to permit more rational treatment of confinement from concrete cover and transverse reinforcement the contribution of end hooks and bends for tension bars and end bearing to compression laps New guidance is provided covering a range of construction techniques and service environments and the influence of long term degradation Analyses of various aspects of detailing on performance of laps and anchorages have resulted in discontinuation of the proportion lapped factor 6 alterations to requirements of transverse reinforcement at laps and have resolved inconsistencies in provisions for bundled bars between major national codes Apparent inconsistencies in existing rules for lapped joints and anchorages and between the local bond slip model and design rules are also resolved thus allowing integration of application rules and modelling Finally the basis for an attempt to introduce simple detailing rules for laps and anchorages is described

Precast tunnel segments in fibre-reinforced concrete fib Fédération Internationale du Béton, 2017-08-01 With the publication of this bulletin fib Commission 1 is initiating a new series of documents related to the use of structural concrete in underground construction where structural concrete plays a major and increasingly important role The usage of underground space is more than ever a key issue of urban planning and fib decided to start addressing the issues related to the design and construction of concrete structures in this particular environment In this context one the most significant applications of structural concrete is tunnel lining for which the properties of reinforced concrete are particularly well suited through compressive strength water tightness ductility and durability Reinforced concrete tunnels linings have mostly been traditionally cast in situ but the development of Tunnel Boring Machines has lead to the invention of precast concrete segmental lining technology which is nowadays one of the most promising applications of Fibre Reinforced Concrete FRC Thanks to the courage and dedication of innovative designers and contractors a number of large tunnels have already been built around the World with FRC precast linings and this report presents the experience acquired with these projects and also provides guidance about the way to apply 2010 fib Model Code recommendations on FRC to these structures The main drivers of this evolution from RC to FRC are a better ductility more durability and easier fabrication and construction process As Commission 1 chair I am very grateful to Alberto Meda and to all members of this task group for opening the way to this new field of underground structures within our commission and to have efficiently produced a document that will be useful to our members and to the construction community around the World
