The Science of Renewable Energy presents a no nonsense discussion of the importance of renewable energy while adhering to scientific principles, models and observations. The text includes in depth discussions of emerging technologies including biomass and fuel cells and major sources of renewable energy such as ocean, hydro, solar and wind energy. To provide a fundamental understanding of the basic concepts of renewable energy the book also offers an extensive discussion on the basics of electricity since it is applied to and produced from all forms of renewable energy. While emphasizing the technical aspects and practical applications of renewable sources the text also covers the economic, social and policy implications of large scale implementation. The main focus of the book is on methods of obtaining energy from self replenishing natural processes while limiting pollution of the atmosphere, water and soil as this is a critical pathway for the future. Exploring the subject from a scientific perspective highlights the need for renewable energy and helps to evaluate the task at hand. The book is written for a wide range of readers including students of diverse backgrounds and individuals in the energy industries and presents the material in a user friendly manner. Even individuals can have an impact on the quest to develop renewable energy sources. The concepts and guidelines described provide critical scientific rationale for pursuing clean and efficient energy sources as well as the knowledge needed to understand the complex issues involved. Sustainable Regional Development Michael P. Clair,2023-08-16 Many communities and regions are being left behind in the new economic order The book starts with the premise that in today s knowledge based economy innovation is key but that only seems to happen in larger urban centres It seems that smaller centres and peripheral regions can only look forward to decline and eventual irrelevance but this need not be the case Wherever there are people there is the potential to innovate This book demonstrates that innovators are not limited to inventors and entrepreneurs Each innovation starts with an idea that is nurtured by its creator and incubated by the larger community The book identifies different categories of creators such that many readers will recognize themselves as being in fact creators And it identifies different ways of coming up with ideas which may validate how creators spend their time It identifies ways to judge whether ideas should be pursued or not and looks at the steps required to turn an idea into an innovation Many declining communities and regions around the world have resuscitated themselves by being creative and innovative sometimes in startling ways This book will provide some ideas to help any region reinvent itself But having a few individuals with good ideas is not sufficient to revive a region This book also shows how effective leaders are needed to help stimulate more creative activity and just as importantly to coordinate the necessary resources to turn creative ideas into innovations The book will appeal to students scholars and researchers of economic regional social and sustainable
