Religion And Its Effect Upon Human Evolution:

The Just Law of Compensation S. R. Parchment, 1996-09 1902 Contents Foreword General Discussion on the Law of Compensation Religion a Consideration of the Law of Mind a Narrative of Personal Experiences with the Law The Scientific Monthly James McKeen Cattell, 1925 **The Biological Evolution of Religious Mind and Behavior** Eckart Voland, Wulf Schiefenhövel, 2009-08-12 In a Darwinian world religious behavior just like other behaviors is likely to have undergone a process of natural selection in which it was rewarded in the evolutionary currency of reproductive success This book aims to provide a better understanding of the social scenarios in which selection pressure led to religious practices becoming an evolved human trait i e an adaptive answer to the conditions of living and surviving that prevailed among our prehistoric ancestors This aim is pursued by a team of expert authors from a range of disciplines Their contributions examine the relevant physiological emotional cognitive and social processes The resulting understanding of the functional interplay of these processes gives valuable insights into the biological roots and benefits of religion **The Axial Age and Its Consequences** Robert N. Bellah, Hans Joas, 2012-10-31 This book makes the bold claim that intellectual sophistication was born worldwide during the middle centuries of the first millennium bce From Axial Age thinkers we inherited a sense of the world as a place not just to experience but to investigate envision and alter A variety of utopian visions emerged and led to both reform and repression Revising Cognitive and Evolutionary Science of Religion Konrad Szocik, Hans Van Eyghen, 2021-01-12 This unique and pioneering book critically appraises current work from both the cognitive science of religion and the evolutionary study of religion It addresses the question Why does the believer possess supernatural or religious beliefs in the combined context of his cognitive biases their adaptive usefulness measured in terms of survival and reproduction and the impact of social learning and cultural traits The authors outlines a pluralistic approach to the study of religion that does not treat religion as an accidental by product but an adaptation selected by natural selection Chapters discuss the role of religious components for the evolution of cooperation and altruism and explore the development of atheism and secular ideas in cognitive and evolutionary terms Topics such as the usefulness of religion the transmission of religious beliefs and a Darwinian approach to religion are among those addressed Contrary to standard views religious biases are regarded as shaped by cultural influences and not merely by natural dispositions This monograph will particularly appeal to researchers who are looking for a scientific explanation of religion and religious beliefs but who do not stop at the level of narrow cognitive and evolutionary accounts The work will also be of interest to students of philosophy sociology religious studies theology or anthropology who seek to explain such fascinating complex and unequivocal phenomena as religion and religious components *Encyclopædia of Religion and Ethics: Mundas-Phrygians* James Hastings, John Alexander Selbie, Louis Herbert Gray, 1917 Scope theology philosophy ethics of various religions and ethical systems and relevant portions of anthropology mythology folklore biology psychology economics and sociology *The Evolution of Religions*

Lance Grande, 2024-02-13 Thousands of religions have adherents today and countless more have existed throughout history. What accounts for this astonishing diversity? This extraordinarily ambitious and comprehensive book demonstrates how evolutionary systematics and philosophy can yield new insight into the development of organized religion. Lance Grande, a leading evolutionary systematist, examines the growth and diversification of hundreds of religions over time, highlighting their historical interrelationships. Combining evolutionary theory with a wealth of cultural records, he explores the formation, extinction, and diversification of different world religions, including the many branches of Asian cyclicism, polytheism, and monotheism. Grande deploys an illuminating graphic system of evolutionary trees to illustrate historical interrelationships among the world's major religious traditions, rejecting colonialist and hierarchical ladder-of-progress views of evolution. Extensive and informative illustrations clearly and vividly indicate complex historical developments and help readers grasp the breadth of interconnections across eras and cultures. *The Evolution of Religions* marshals compelling evidence starting far back in time that all major belief systems are related despite the many conflicts that have taken place among them. By emphasizing these broad historical interconnections, this book promotes the need for greater tolerance and deeper unbiased understanding of cultural diversity. Such traits may be necessary for the future survival of humanity. **Introduction to the**

Principles of Sociology Grove Samuel Dow, 1920 *Religion as Magical Ideology* Konrad Talmont-Kaminski, 2014-10-20 *Religion as Magical Ideology* examines the relationship between rationality and supernatural beliefs, arguing that such beliefs are products of evolution, cognition, and culture. The book does not offer a false rapprochement between reason and religion; instead, it explores their interrelationship as a series of complex adaptations between cognitive and cultural processes. Exploring the nature of the tension between religious traditions and reason, *Religion as Magical Ideology* develops a dual inheritance theory of religion which combines the cognitive byproduct and prosocial adaptation accounts and analyses the connection between the function of a belief and the degree of protection it gets from potential counter-evidence. With discussion ranging from individual cognitive mechanisms, general functional considerations, to the limits of evolutionary and cognitive processes, the book offers readers a systematic account of how cognition shapes religious beliefs and practices.

Monkey Two Paul Adams, 2017-10-05 In 1925 the State of Tennessee enacted a law that prohibited the teaching of evolution in public schools, specifically that man came from apes. The law was immediately challenged by the ACLU and pitted two famous lawyers, Clarence Darrow and William Jennings Bryan, a religious Fundamentalist and one-time presidential candidate, in a bruising contest. The case became famous, known as the Monkey Trial. In this fictional trial, a high school teacher was fired for introducing religion into his biology class in the form of criticism of Darwinism. The trial involves expert witnesses from a variety of fields who defend and attack Darwinism, but not merely from a biology point of view. There are deep religion, atheism, legal, political, philosophical, and cultural issues that are at stake and reflect today's bifurcated society. The Supreme Court cases in the past fifty years on the Establishment Clause of the First Amendment are demonstrated as in

disarray especially in school religion cases The famous bioatheist Richard Dawkins is called out for his trenchant criticism of Christians and distortion of Darwinism to achieve his ends The lawyers are cut from vastly different cloth an ex Vietnam soldier and an anti war conscientious objector But the scientific and religious experts do most of the talking from the witness stand The present book describes the preparation for and First Week of Trial **Chinese Affairs ...** ,1922 **Religion and Its Effect Upon Human Evolution** S.
