Ezra Pound and the Appropriation of Chinese Poetry Ming Xie, 2021-12-12 First published in 1999 The subject of this book is the translation and appropriation of Chinese poetry by some English and American writers in the early decades of this century The author explores the be concerned as much with English translation of Chinese poetry per se as with the relationship between this body of translation from the Chinese and the developing poetics and practices of what is usually referred to as Imagism as much with the question of historical influence or ascription as with certain interpretive and critical aspects of this correlative relationship Focusing on the direct influence of Chinese poetry upon the theory and practice of

Imagism attributing to Imagist poets in general and Ezra Pound in particular the perception in Chinese poetry of the essential qualities and principles for rejuvenating English poetry in the early decades of the century

The World of Touch David Katz, 2013-05-13 For the first time David Katz's classic monograph *The World of Touch* has been translated into English. Regarded as one of the premiere experimental psychologists, Katz vigorously opposed the atomism and tachistoscopic mentality typical of the sensory psychology of his day. In *The World of Touch*, Katz sought to dispel the invidious distinction between the supposedly higher e.g. vision and audition and lower e.g. touch senses. To help touch regain its original prominence in the field, Katz demonstrated through very simple yet creative experiments how fascinating the abilities of touch are and how valuable the tactual stimulus can be in specifying objects, surfaces, substances, and events. In addition, Katz emphasized the importance of higher order invariants in the perception of objects and the holistic quality of perception in time as well as space. *Journal of Agricultural Research*, 1932 *General Information Series*, 1884 *General Information Series* United States. Geomechanics and Geotechnics of Particulate Media Masayuki Hyodo, Hidekazu Murata, Yukio Nakata, 2017-12-14 Microscopic re-examination of geomaterials consisting of aggregates can shed light on macroscopic behaviour including compressibility, anisotropy, yielding, creep, cyclic liquefaction, and shear rupture. As a result of this process of examination, new methods of material characterization emerge, leading to a greater degree of accuracy in the specification of new constitutive models with physically meaningful parameters. The impetus behind this development is an increasing awareness on sustainability, leading to the more efficient use of recycled materials for geotechnical applications. The characteristics of recycled materials, such as compressibility and self-hardening, may differ significantly from those of natural materials, and it is crucial that evaluation is made from a specifically particulate perspective. *The British Journal of Experimental Pathology*, 1928 *Bulletin*, 1910 *The Strand Magazine*, 1922

Human Hand Function Lynette A. Jones, Susan J. Lederman, 2006-04-20 *Human Hand Function* is a multidisciplinary book that reviews the sensory and motor aspects of normal hand function from both neurophysiological and behavioral perspectives. Lynette Jones and Susan Lederman present hand function as a continuum ranging from activities that are essentially sensory in nature to those that have a strong motor component. They delineate four categories of function along this sensorimotor continuum: tactile sensing, active haptic sensing, prehension, and non-prehensile skilled movements. They use this as a framework for analyzing and synthesizing the results from a broad range of studies that have contributed to our understanding of how the normal human hand functions. The book begins with a historical overview of research on the hand and a discussion of the hand's evolutionary development in terms of anatomical structure. The subsequent chapters review the research in each of the four categories along the continuum, covering topics such as the intensive spatial, temporal, and thermal sensitivity of the hand; the role of hand movements in recognizing common objects; the control of reaching and grasping movements; and the organization of keyboard skills. Jones and Lederman also examine how sensory and motor

function develops in the hand from birth to old age and how the nature of the end effector e.g. a single finger or the whole hand that is used to interact with the environment influences the types of information obtained and the tasks performed The book closes with an assessment of how basic research on the hand has contributed to an array of more applied domains including communication systems for the blind haptic interfaces used in teleoperation and virtual environment applications tests used to assess hand impairments and haptic exploration in art Human Hand Function will be a valuable resource for student and professional researchers in neuroscience cognitive psychology engineering human technology interaction and physiology

Pervasive Haptics Hiroyuki Kajimoto, Satoshi Saga, Masashi Konyo, 2016-04-27 This book examines the state of the art in diverse areas of haptics touch related research including the psychophysics and neurophysiology of haptics development of haptics displays and sensors and applications to a wide variety of fields such as industry education therapy medicine and welfare for the visually impaired It also discusses the potential of future haptics interaction such as haptics for emotional control and remote haptics communication The book offers a valuable resource not only for haptics and human interface researchers but also for developers and designers at manufacturing corporations and in the entertainment industries
