Smith, 1991-06-20 Examining the ways in which politics and ideology stimulate and shape changes in human science this book focuses on the cultural sciences in nineteenth and early twentieth century Germany The book argues that many of the most important theoretical directions in German cultural science had their origins in a process by which a general pattern of social scientific thinking one that was closely connected to political liberalism and dominant in Germany and elsewhere before the mid nineteenth century fragmented in the face of the political troubles of German liberalism after that time Some liberal social scientists who wanted to repair both liberalism and the liberal theoretical pattern and others who wanted to replace them with something more conservative turned to the concept of culture as the focus of their intellectual endeavors Later generations of intellectuals repeated the process motivated in large part by the experiences of liberalism as a political movement in the German Empire Within this framework the book discusses the formation of diffusionism in German anthropology Friedrich Ratzel s theory of Lebensraum folk psychology historical economics and cultural history It also relates these developments to German imperialism the rise of radical nationalism and the upheaval in German social science at the turn of the century *History of Science* Henry Smith Williams, Edward Huntington Williams, 2023-12-22 In the anthology *History of Science* editors Henry Smith Williams and Edward Huntington Williams curate an expansive journey through the evolution of scientific thought capturing the essence of discovery across eras This collection weaves together narratives from various scientific domains astronomy biology chemistry and more highlighting pivotal moments and complex shifts in understanding that have propelled human progress Each work while distinctive in style and approach collectively reflects the progression and diversification of scientific disciplines The anthology renders a nuanced mosaic presenting both well known breakthroughs and less celebrated yet equally significant contributions offering a comprehensive vista of the sciences Henry Smith Williams and Edward Huntington Williams themselves prolific contributors to scientific literature bring together a myriad of voices from diverse academic and cultural backgrounds The anthology resonates with the echoes of the Enlightenment Renaissance and other transformative periods aligning itself with movements that have reshaped intellectual landscapes By bridging varied perspectives and historical contexts the Editors shed light on how diverse cultural narratives have intertwined with the scientific method to yield a richer more global tapestry of knowledge *History of Science* stands as an invaluable resource for readers eager to traverse the intellectual terrain of scientific discovery This anthology offers an unparalleled encounter with the myriad voices and ideas that have etched the contours of human understanding By immersing themselves in this compilation readers are invited to partake in a dialogue that transcends discipline and era enriching their appreciation of the interconnectedness of scientific advancements and the diversity of thought driving them forward **A History of Science (Vol. 1-5)** Henry Smith Williams, Edward Huntington Williams, 2023-12-16 A *History of Science* Vol 1 5 is an expansive

A History of Science: Aspects of recent science Henry Smith Williams, 1904 Darwin's Demise

Nicholas Comninellis, Joe White, 2001-11-01 For people confused by the contradictory messages they hear from secular science and church teaching evolution can be intimidating The truth is that Darwin s ideas are based upon faulty science and that creationists have solid evidence to support their claims Finally a brilliant defense of Genesis and the Bible s teaching about origins is waiting for those who are soon to understand how Darwinism is fraudulent faith masquerading as science Authors Joe White and Nicholas Comninellis have a passion for truth and for sharing it with students and their parents In Darwin s Demise they succeed in showing why real science is burning down the House of Darwin [The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences](#) David C. Mendelsohn,P. Weingart,R.D. Whitely,2012-12-06 **Doctors** Sherwin B. Nuland,2011-10-19 From the author of How We Die the extraordinary story of the development of modern medicine told through the lives of the physician scientists who paved the way How does medical science advance Popular historians would have us believe that a few heroic individuals possessing superhuman talents lead an unselfish quest to better the human condition But as renowned Yale surgeon and medical historian Sherwin B Nuland shows in this brilliant collection of linked life portraits the theory bears little resemblance to the truth Through the centuries the men and women who have shaped the world of medicine have been not only very human but also very much the products of their own times and places Presenting compelling studies of great medical innovators and pioneers **Doctors** gives us a fascinating history of modern medicine Ranging from the legendary Father of Medicine Hippocrates to Andreas Vesalius whose Renaissance masterwork on anatomy offered invaluable new insight into the human body to Helen Taussig founder of pediatric cardiology and co inventor of the original blue baby operation here is a volume filled with the spirit of ideas and the thrill of discovery **A History of Anthropology as a Holistic Science** Glynn Custred,2016-04-27 A History of Anthropology as a Holistic Science defends the holistic scientific approach by examining its history which is in part a story of adventure and its sound philosophical foundation It shows that activism and the holistic scientific approach need not compete with one another This book discusses how anthropology developed in the nineteenth century during what has been called the Second Scientific Revolution It emerged in the United States in its holistic four field form from the confluence of four lines of inquiry the British the French the German and the American As the discipline grew and became more specialized a tendency of divergence set in that weakened its holistic appeal Beginning in the 1960s a new movement arose within the discipline which called for abandoning science as anthropology s mission in order to convert into an instrument of social change a redefinition which weakens its effectiveness as a way of understanding humankind and which threatens to discredit the discipline **How To Construct Your Intellectual Pedigree: A History Of Mentoring In Science** Elof Axel Carlson,2020-08-27 This is a handbook that shows the reader how to construct an intellectual pedigree It is also a history of science monograph because the completed intellectual pedigrees can be used individually or collectively to trace the influences of mentoring in the life sciences The author uses Hermann Joseph Muller 1890 1967 which includes his own intellectual pedigree to show how knowledge was shifted from Italy to Germany and England to France and then to the American Colonies Through Muller the author goes in two directions one leading to Huxley Darwin and Newton The second leads to Agassiz Malpighi Borelli and Galileo The author also shows from comparing 60 additional intellectual pedigrees that about one third go to Newton one third to Galileo

and the rest to other icons of the past e g Linnaeus Lavoisier Gay Loussac Leibniz It shows how small was the pool of available scientists in the universities before the mid 19th century This book will stimulate graduate students and faculty to construct their own intellectual pedigrees It will also be of interest to historians and philosophers of science The book discusses the role of mentoring dividing this into inputs of intellectual development as well as outputs of development using timelines arranged as circles For each mentor a brief account is given of that person s work and relation to the subject of the pedigree
