Biosafety in Industrial Biotechnology P. Hambleton, T. Salusbury, 2012-12-06 As an industry biotechnology may be likened to the Hymn Book being both ancient and modern Whereas activities such as baking brewing the fermenting of foods date from our earliest attempts to control and utilise the environment the application of recombinant DNA technology is recognised as being at the forefront of novel industrial development Perhaps because of its association with processing foodstuffs together with the benefits derived from applications in the early organic chemistry and pharmaceutical industries biotechnology has been regarded as being inherently safe Yet unlike other modern industries such as chemical and nuclear where regulation has followed from incidents or accidents modern biotechnology has been subject to close scrutiny and regulation almost from its inception The process of regulation itself is somewhat unusual in that it was initially self imposed by the very scientists who developed the fundamental techniques of recombinant DNA technology They recognised the significance of their development but were concerned of the effects on humans and the environment of uncontrolled application of the new powerful technology Concern about the possible consequences of genetic manipulation has undoubtedly been the driving force behind the regulations that are now in place in many parts of the world and which are the subject of this book Safety issues in the biotechnology industry can be categorised under three headings worker environmental and consumer product safety
