In this comprehensive book Victor Mote illuminates the dichotomy between Siberia's rich treasurehouse of resources and its peripheral relationship to the rest of the world. With this paradox in mind he traces the region's history from the Stone Age to the present emphasizing the unique blend of wit and will developed by inhabitants to survive one of the most brutal environments in the world a land that has been part colony part prison and part frontier. Continuity And Change In Rural Russia A Geographical Perspective Gregory Ioffe, Tatyana Nefedova, 2018-02-23 Contrary to the viewpoint of many Western scholars the authors of this penetrating analysis argue that private farming is not a viable option in Russia's future. Instead a convergence of Soviet style subsidiary farming with traditional and reorganized collective farms is the most plausible path of evolution in most rural areas. Grigory Ioffe and Tatyana Nefedova arrive at this conclusion by a careful examination of ongoing reform efforts in Russian agriculture against the backdrop of European and Russian agrarian history and rural spatial development since the late nineteenth century. The comparisons at the national level are then filled in with consideration of a number of Russian provinces (oblasti) and regions (raiony). Their research reveals the substantial negative impact of rural depopulation on the Russian agrarian economy. Seventy original maps richly complement and support the narrative

The End of Peasantry? Grigory Ioffe, Tatyana Nefedova, Ilya Zaslavsky, 2006-10-19 *The End of Peasantry* examines the dramatic recent decline of agriculture in post Soviet Russia Historically Russian farmers have encountered difficulties relating to the sheer abundance of land the vast distances between population centers and harsh environmental conditions More recently the drastic depopulation of rural spaces decreases in sown acreage and overall inefficiency of land usage have resulted in the disruption and spatial fragmentation of the countryside For many decades rural migration has been a selective process resulting in the most enterprising and self motivated people leaving the rural periphery The new agricultural operators representing nascent but aggressive Russian agribusiness have difficulty co-opting traditional rural communities afflicted by profound social dysfunction The contrast between agriculture in proximity to large cities and in their hinterlands is as sharp as ever and some vacant niches are increasingly occupied by ethnically non Russian migrants All of these conditions existed to some degree in pre Soviet times but they have been exacerbated since Russia took steps toward a market economy Understudied and often underestimated in the West the crisis facing Russian agriculture has profound implications for the political and economic stability of Russia The authors see hope in the significant increase in land use intensity on vastly diminished farmland The lessons gathered from this thoroughly researched study are far reaching and relevant to the disciplines of Slavic and European studies agriculture political science economics and human geography

The New Russia Lawrence R. Klein, Marshall I. Pomer, 2001 This work delivers the unpopular message that the West has played a pivotal role in the Russian economic disaster of the 1990s The 26 contributions to this book examine this topic which is divided into three parts theory evidence and policy **How Russia Is Not Ruled** Allen C. Lynch, 2005-01-10 The state

remains as important to Russia's prospects as ever. This is so not only because as in any society an effectively functioning state administration is necessary to the proper functioning of a complex economy and legal system but also because in Russian circumstances factors of economic geography tend to increase costs of production compared to the rest of the world. These mutually reinforcing factors include the extreme severity of the climate, the immense distances to be covered, the dislocation between European population centers and Siberian natural resource centers, and the inevitable predominance of relatively costly land transportation over sea-borne transportation. As a result, it is questionable whether Russia can exist as a world civilization under predominantly liberal economic circumstances in a unified liberal global capital market. Large-scale private direct capital investment will not be directed to massive outdoor infrastructure projects typical of state investment in the Soviet period.

Environmental Problems in East-Central Europe Frank Carter, David Turnock, 2002-09-26. In this new edition, the progress made in the last decade to solve the environmental problems described in the first edition is assessed. The attempts to bring environmental legislation into line with West European norms is also described. *Environmental Problems of East-Central Europe* looks at air and water pollution, modern farming, water supplies, waste management, and landscape protection. These topics are placed within economic, social, and political profiles as spending on a clean environment must be reconciled with welfare spending and the safeguarding of jobs. European Union assistance, civil society, and the work of environmental NGOs are also discussed. All of these matters are considered within the context of the wider geographical area and then by each individual country, including the previously communist states lying to the west of the Soviet Union, now with the former federal states of Czechoslovakia and Yugoslavia broken up into seven different entities, and a review of the former Soviet Union with particular reference to the Baltic States. *Environmental Problems in East-Central Europe* provides a wealth of up-to-date reference material with a vast amount of supporting literature on environmental conditions and the functioning of civil society, and a map of each country. The environment is being taken seriously by them all, such is the influence of the Rio sustainability agenda in general and the EU environmental acquis in particular. The book reveals that Eastern Europe is not a blighted area but in some respects has a higher biodiversity than Western Europe. Although there is enormous waste and inefficiency in energy use, people actually consume relatively little, and the East therefore has some lessons for the West in terms of managing on the basis of a fair share of the earth's resources.
