Direct Sensor-to-Microcontroller Interface Circuits Ferran Reverter, Ramón Pallás Areny, 2005-11-18 This book describes the design and characterisation of interface circuits for the direct connection of sensors with a time based output signal to a microcontroller The topics analysed are a the performance of microcontrollers in timing signals b the susceptibility of IC quasi digital sensors to supply voltage changes and c the performance of direct modulating sensor to microcontroller interfaces based on measuring the charging discharging time of an RC circuit The authors analyse the features and limitations of these interface circuits and offer design rules and guidelines for improving their performance This book interests designers of microcontrollers and IC sensors which can apply the theoretical models developed herein to predict and reduce the effects of power supply interference It also interests electronic circuit designers which can apply the test circuits measurement methods and design rules to their own designs Finally the book being the result of doctoral thesis it may inspire other researchers to engage in gaining further insight in some of the topics considered and help them in learning a systematic approach to hypothesis formulation and testing

Integrated Smart Sensors Gert van der Horn, Johan Huijsing, 2012-12-06 1 1 1 Introduction The signal processing and storage capacity of the human brain enables us to become powerful autonomous beings but only if our brains operate in conjunction with at

least some of our senses and muscles Using these organs we can interact with our environment learn to adapt and improve important aspects of our life Similarly the signal processing capabilities of modern electronics computers could be combined with electronic sensors and actuators to enable interaction with and adaptation to the non electrical environment This willlead to smarter and more powerful automated tools and machines To facilitate and stimulate such a development easy to use low cost sensors are needed The combination of electronic interface functions and a sensor in an integrated smart sensor that provides a standard digital and bus compatible output would simplify the connection of sensors to standard electronic signal processors microcontrollers computers etc Currently the calibration procedure required for standardization of the sensor output signal level contributes largely to the production costs of accurate sensors To enable automation of the calibration procedure and hence reduce the sensor fabrication costs a digital calibrationjunction should be included in the smart sensor
