Luminescence from Biological and Synthetic Macromolecules Herbert Morawetz, I. Z. Steinberg, 1981 *Luminescence from Biological and Synthetic Macromolecules* H Morawetz (ed), 1981 *Amino Acids, Peptides and Proteins* J H Jones, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1982 **Photophysical and**

Photochemical Tools in Polymer Science Mitchell A. Winnik, 2012-12-06 In 1980 the New York Academy of Sciences sponsored a three day conference on luminescence in biological and synthetic macromolecules After that meeting Professor Frans DeSchryver and I began to discuss the possibility of organizing a different kind of meeting with time for both informal and in depth discussions to examine certain aspects of the application of fluorescence and phosphorescence spectroscopy to polymers Our ideas developed through discussions with many others particularly Professor Lucien Monnerie By 1983 when we submitted our proposal to NATO for an Advanced Study Institute the area had grown enormously It is interesting in retrospect to look back on the points which emerged from these discussions as the basis around which the scientific program would be organized and the speakers chosen We decided early on to focus on applications of these methods to provide information about polymer molecules and polymer systems The topics would all relate to the conformation and dynamics of macromolecules or to the morphology of polymer containing systems Another important decision was to expand the scope of the ASI to include certain photochemical techniques particularly laser flash photolysis These applications were at the time quite new but full of promise as important sources of information about polymers **Introduction to Polymer Spectroscopy** W. Klöpffer, 2012-12-06 This book has grown out of several courses of lectures held at the University of Mainz in the years 1978 to 1981 at the Ecole Polytechnique Federal Lausanne and at the University of Fribourg Switzerland The

last two courses were held in the framework of the 3e Cycle lectures in June 1981 According to this genesis the emphasis of the book lies on a unified and concise approach to introducing polymer spectroscopy rather than on completeness which by the way could hardly be achieved in a single volume In contrast to other books on this subject equal weight is given to electronic spectroscopy vibrational spectroscopy and spin resonance techniques The electronic properties of polymers have been increasingly investigated in the last ten years until recently however these studies and the spectroscopic methods applied have not generally been considered as part of polymer spectroscopy The increasing use of electronic spectroscopy by polymer researchers on the other hand shows that this type of spectroscopy provides efficient tools for gaining insight into the properties of polymers which cannot be obtained by any other means

Current Catalog National Library of Medicine (U.S.),1982 First multi year cumulation covers six years 1965-70 Amino-acids, Peptides, and Proteins,1983 **Lasers in Polymer Science and Technology** Jan F. Rabek,Jean-Pierre Fouassier,1989-11-30 The purpose of this 4 volume book is to examine some of the applications of lasers in polymer science and technology Now available for the first time up to date information on this fascinating subject is compiled and presented in compact form This book focuses on current research and developments in the application of lasers in polymer and biopolymer chemistry It includes experimental and theoretical details apparatus techniques and applications This book is a useful source for researchers students polymer chemists and physicists involved in this astonishing field of high technology

Photosynthesis Bibliography Zdenek Sesták,J. Catský,2013-11-11 The bibliography includes papers in all fields of photosynthesis research from studies of model biochemical and biophysical systems of the photosynthetic mechanism to primary production studied by the so called growth analysis In addition to papers devoted entirely to photosynthesis papers on other topics are included if they contain data on photosynthetic activity photorespiration chloroplast structure chlorophyll and carotenoid synthesis and destruction etc or if they contain valuable methodological information measurement of selected environmental factors leaf area etc In many branches it has been difficult to define the limits of interest for photosynthesis researchers This problem has arisen e.g. in topics dealing with the transfer of gases where in addition to the papers on carbon dioxide transfer some papers on water vapour transfer are included these being of general application or bringing new approaches On the other hand many papers dealing with the anatomy and physiology of stomata have been omitted if the aspect of carbon dioxide or water vapour exchange has not been discussed

Annals of the New York Academy of Sciences Thomas Lincoln Casey,Gilbert Van Ingen,Charles Lane Poor,Edmund Otis Hovey,Ralph Winfred Tower,2003 Records of meetings 1808-1916 in v 11-27 Cumulated Index Medicus,1970 The Radiation Chemistry of Macromolecules Malcolm Dole,2012-12-02 The Radiation Chemistry of Macromolecules is the first from a two volume series aiming to contribute to the radiation chemistry in general The chapters in this volume are divided into two major parts where the first part deals with the basic processes and theory while the second part tackles experimental techniques and applications to polyethylene Part I focuses

on the discussion on general principles of radiation effects fundamental concepts on energy transfer and the theory of free radicals The subject of polymers is discussed thoroughly in several chapters including its molecular mobilities and electrical conductivity Part II presents experimental techniques and a description of the radiation chemistry of a single polymer This part also includes a discussion on the morphology of polyethylene and free radicals in irradiated polyethylene This book is an important reference to students and scientists in the field of radiation chemistry of macromolecules
