Lung Growth and Development John A. McDonald, 2024-11-01 Reflects the explosion of information and technological breakthroughs that have facilitated investigations into the development of the lung including recombinant DNA technology molecular genetics transgenics and advances in lung cell and molecular biology Provides nearly 2800 bibliographic citations and over 170 tables drawings and x rays to help clarify specific discussions      Fetal and Neonatal Lung Development Alan H. Jobe, Jeffrey A. Whitsett, Steven H. Abman, 2016-04-18 Lung disease affects more than 600 million people worldwide While some of these lung diseases have an obvious developmental component there is growing appreciation that processes and pathways critical for normal lung development are also important for postnatal tissue homeostasis and are dysregulated in lung disease This book provides an authoritative review of fetal and neonatal lung development and is designed to provide a diverse group of scientists spanning the basic to clinical research spectrum with the latest developments on the cellular and molecular mechanisms of normal lung development and injury repair processes and how they are dysregulated in disease The book covers genetics omics and systems biology as well as new imaging techniques that are transforming studies of lung development The reader will learn where the field of lung development has been where it is presently and where it is going in order to improve outcomes for patients with common and rare lung diseases      Lung Development Claude Gaultier, Jacques R Bourbon, Martin Post, 2013-05-27 Knowledge about the mechanisms of lung development has been growing rapidly especially with regard to cellular and molecular aspects of growth and differentiation This authoritative international volume reviews key aspects of lung development in health and disease by providing a comprehensive review of the complex series of cellular and molecular interactions required for lung development It covers such topics as pulmonary hypoplasia effects of malnutrition and pulmonary angiogenesis An indispensable reference for all those involved in studying or treating lung disease in neonates and children the book offers a unique view of the development of this essential organ      **Fetal Growth and Development** Richard Harding, Alan D. **Membrane Receptors, Channels and Transporters in Pulmonary Circulation** Jason X. -J. Yuan, Jeremy P. T. Ward, 2010-03-10 Membrane Receptors Channels and Transporters in Pulmonary Circulation is a proceeding of the 2008 Grover Conference Lost Valley Ranch and Conference Center Sedalia Colorado September 3 7 2008 which provided a forum for experts in the fields of those receptors channels and transporters that have been identified as playing key roles in the physiology and pathophysiology of the pulmonary circulation The book rigorously addresses i recent advances in our knowledge of receptors channels and transporters and their role in regulation of pulmonary vascular function ii how modulation of expression and function of receptors channels and transporters and their interrelationships contribute to the pathogenesis of pulmonary vascular disease and iii the therapeutic opportunities that may

be revealed by enhancing our understanding of this area. The overall goal was to explore the mechanisms by which specific receptors, channels, and transporters contribute to pulmonary vascular function in both health and disease and how this knowledge may lead to novel interventions in lung dysplasia, pulmonary edema, lung injury, and pulmonary and systemic hypertension to reduce and prevent death from lung disease.

**Membrane Receptors, Channels, and Transporters in Pulmonary Circulation** is divided into six parts. Part I, **Ion Channels in the Pulmonary Vasculature: Basics and New Findings**, is designated for basic knowledge and recent findings in the research field of ion channels in pulmonary circulation. There are five chapters in Part I discussing the function, expression, distribution, and regulation of various ion channels present in pulmonary vascular smooth muscle cells and how these channels are integrated to regulate intracellular  $Ca^{2+}$  and cell functions.

Part II, **TRP Channels in the Pulmonary Vasculature: Basics and New Findings**, is composed of five chapters that are exclusively designed to discuss the role of a recently identified family of cation channels, transient receptor potential (TRP) channels, in the regulation of pulmonary vascular tone and arterial structure.

Part III, **Pathogenic Role of Ion Channels in Pulmonary Vascular Disease**, includes four chapters that discuss how abnormal function and expression of various ion channels contribute to changes in cell functions and the development of pulmonary hypertension.

Part IV, **Receptors and Signaling Cascades in Pulmonary Arterial Hypertension**, consists of five chapters devoted to the role of bone morphogenetic protein receptors, Notch receptors, serotonin receptors, Rho kinase, and vascular endothelial growth factor receptors in the development of pulmonary arterial hypertension.

Part V, **Receptors and Transporters Role in Cell Function and Hypoxic Pulmonary Vasoconstriction**, includes four chapters designed to illustrate the potential mechanisms involved in oxygen sensing and hypoxia-induced pulmonary vasoconstriction and hypertension.

Part VI, **Targeting Ion Channels and Membrane Receptors in Developing Novel Therapeutic Approaches for Pulmonary Vascular Disease**, consists of five chapters which discuss the translational research involving membrane receptors, channels, and transporters, including their potential as novel drug targets.

We hope that **Membrane Receptors, Channels, and Transporters in Pulmonary Circulation** will allow readers to foster new concepts and new collaborations and cooperations among investigators so as to further understand the role of receptors, channels, and transporters in lung pathophysiology. The ultimate goal is to identify new mechanisms of disease as well as new therapeutic targets for pulmonary vascular diseases. An additional outcome should be enhanced understanding of the role of these entities in systemic vascular pathophysiology, since the conference will include researchers and clinicians with interests in both pulmonary and systemic circulations.
