On the Edge of Earth Steven Lambakis, 2013-12-06 For millennia the rituals of death and remembrance have been fixed by time and location but in the twenty first century grieving has become a virtual phenomenon Today the dead live on through social media profiles memorial websites and saved voicemails that can be accessed at any time This dramatic cultural shift has made the physical presence of death secondary to the psychological experience of mourning Virtual Afterlives investigates emerging popular bereavement traditions Author Candi K Cann examines new forms of grieving and evaluates how religion and the funeral industry have both contributed to mourning rituals despite their limited ability to remedy grief As grieving traditions and locations shift people are discovering new ways to memorialize their loved ones Bodiless and spontaneous memorials like those at the sites of the shootings in Aurora and Newtown and the Boston Marathon bombing as well as roadside memorials car decals and tattoos are contributing to a new bereavement language that crosses national boundaries and culture specific perceptions of death Examining mourning practices in the United States in comparison to the broader background of practices in Asia and Latin America Virtual Afterlives seeks to resituate death as a part of life and mourning as a unifying process that helps to create identities and narratives for communities As technology changes the ways in which we experience death this engaging study explores the culture of bereavement and the ways in which it too is being significantly transformed

Power, State and Space Marco Aliberti, Ottorino Cappelli, Rodrigo Praino, 2023-07-18 This book explains on

what basis a nation can claim the status of space power what are the criteria differentiating a space power from lesser space actors and how their spacepower can be empirically measured and assessed To this end it sets forth a comprehensive multidisciplinary framework to enable a dynamic comparison of space actors and of the pathways that lead them in and out of the space powers club Drawing upon a critical review of the existing literature it conceptualises spacepower as a form of state power based on the complex interplay between the two defining dimensions of stateness namely the well studied dimension of capacity and the often neglected yet exceedingly important dimension of autonomy The book demonstrates that only actors possessing high levels of both autonomy and capacity qualify as space powers Different levels of either capacity or autonomy produce other types of space actors including skilled spacefarers self reliant spacefarers primed spacefarers and emerging space actors This innovative conceptual framework is complemented by an in depth comparative assessment that collects and processes a large amount of hard to find data on the most active global space actors and aggregates multiple indicators into a compound non hierarchical index of space power visualised in the form of a matrix

Critical Issues in the History of Spaceflight Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences

The Militarization of European Space Policy Thomas Hoerber, Iraklis Oikonomou, 2023-10-30. This book is focused on militarization as the nucleus of EU space policy and the interrelatedness of European security, industrial competitiveness and military capabilities in the shaping of this policy. The EU and key member states have increasingly joined the US, China and Russia among others in regarding space assets as critical military as well as economic, industrial and technological enablers. This book tackles this issue by first shedding light on the military aspects of EU space policy with special emphasis on the security and defence dimensions of projects such as Galileo, Copernicus, Space Situational Awareness and Satellite Communication. In this context contributors confront the empirical aspect of developments including the role of different institutional actors and the involvement of specific member states. Further the volume analyses the discursive, ideological, normative and theoretical foundations of the use of space by the EU for strategic purposes drawing on the broad spectrum of European integration, International Relations theory. Last but not least the volume discusses initiatives outside the EU by key global space players with an emphasis on the US and transatlantic space relations. All chapters maintain a solid empirical foundation in the form of geographical or issue related focus with an area specific emphasis on the EU as a whole, transatlantic relations, the policies of key member states such as France and Italy and core space powers such as the US, China and India. This book will be of much interest to students of space, power, security studies, European politics and International Relations.

is the 42nd volume in the Occasional Paper series of the U S Air Force Institute for National Security Studies INSS This volume presents two important papers on United States military space The first paper What is Spacepower and Does It Constitute a Revolution in Military Affairs examines the concept of spacepower as it is emerging within the U S military and business sectors to establish the basis for military space roles and implications It also posits military commercial sector linkages as the best near term road map for future development As commercial activities expand the importance of United States space and as technological advances enable military missions Hays sees expanded military roles including space weaponization on the horizon He concludes that military space has already had a significant impact on the American way of war That trend will only continue as the promise of a true space led revolution in military affairs awaits eventual space weaponization Given an increasingly important U S commercial and military presence in space the second paper Space Related Arms Control and Regulation to 2015 Precedents and Prospects presents a detailed analysis of existing regulations and controls that constrain and shape military space use and development It also presents a comprehensive examination of current and future issues that will define likely arenas of international efforts to further control military space The United States must be very aware of the possible consequences for its overall commercial and military space efforts in addressing these issues Finally the paper suggests areas where some current regulatory emphasis could benefit the United States indicating areas for current policy emphasis Together the two papers provide a timely and important examination of the current state and the likely future of United States military space

Another Bloody Century Colin S. Gray, 2012-02-23 How the wars of the near future will be fought and who will win them Many nations peoples and special interest groups believe that violence will advance their cause Warfare has changed greatly since the Second World War it continued to change during the late 20th century and this process is still accelerating Political technological social and religious forces are shaping the future of warfare but most western armed forces have yet to evolve significantly from the cold war era when they trained to resist a conventional invasion by the Warsaw Pact America is now the only superpower but its dominance is threatened by internal and external factors The world s most hi tech weaponry seems helpless in the face of determined guerrilla fighters not afraid to die for their beliefs Professor Colin Gray has advised governments on both sides of the Atlantic and in ANOTHER BLOODY CENTURY he reveals what sort of conflicts will affect our world in the years to come

Space Warfare John J. Klein, 2012-09-10 This new study considers military space strategy within the context of the land and naval strategies of the past Explaining why and how strategists note the similarities of space operations to those of the air and naval forces this book shows why many such strategies unintentionally lead to overemphasizing the importance of space based offensive weaponry and technology Counter to most U S Air Force doctrines the book argues that space based weapons don t imbue superiority It examines why both air and naval strategic frameworks actually fail to adequately capture the scope of real world issues regarding current space operations Yet by expanding a naval strategic framework to include

maritime activities which includes the interaction of land and sea the breadth of issues and concerns regarding space activities and operations can be fully encompassed Commander John Klein United States Navy uses Sir Julian Corbett's maritime strategy as a strategic springboard while observing the salient lessons of other strategists including Sun Tzu Clausewitz Jomini and Mao Tse tung to show how a space strategy and associated principles of space warfare can be derived to predict concerns develop ideas and suggest policy not currently recognized This book will be of great interest to all students and scholars of military and strategic studies and to those with an interest in space strategy in particular
