Plants For People:

Plants, People and Practices Jay Sanderson, 2017-05-18 Article 14 Protection Independent of Measures Regulating Production Certification and Marketing **Plants, People, and Culture** Michael J. Balick, Paul Alan Cox, 2020-08-19 Is it possible that plants have shaped the very trajectory of human cultures Using riveting stories of fieldwork in remote villages two of the world's leading ethnobotanists argue that our past and our future are deeply intertwined with plants Creating massive sea craft from plants indigenous shipwrights spurred the navigation of the world's oceans Today indigenous agricultural innovations continue to feed clothe and heal the world's population One out of four prescription drugs for example were discovered from plants used by traditional healers Objects as common as baskets for winnowing or wooden boxes to store feathers were ornamented with traditional designs demonstrating the human ability to understand our environment and to perceive the cosmos Throughout the world the human body has been used as the ultimate canvas for plant based adornment as well as indelible design using tattoo inks Plants also garnered religious significance both as offerings to the gods and as a doorway into the other world Indigenous claims that plants themselves are sacred is leading to a startling reformulation of conservation The authors argue that conservation goals can best be achieved by learning from rather than opposing indigenous peoples and their beliefs **KEY FEATURES** An engrossing narrative that invites the reader to personally engage with the relationship between plants people and culture Full color illustrations throughout including many original photographs captured by the authors during fieldwork New to this edition **Plants That Harm** a chapter that examines the dangers of poisonous plants and the promise that their study holds for novel treatments for some of our most serious diseases including Alzheimer's and substance addiction Additional readings at the end of each chapter to encourage further exploration Boxed features on selected topics that offer further insight Provocative questions to facilitate group discussion Designed for the college classroom as well as for lay readers this update of **Plants People and Culture** entices the reader with firsthand stories of fieldwork spectacular illustrations and a deep respect for both indigenous peoples and the earth's natural heritage **Plant Kin** Theresa L. Miller, 2019-05-14 The Indigenous Canela inhabit a vibrant multispecies community of nearly 3 000 people and over 300 types of cultivated and wild plants living together in Maranhão State in the Brazilian Cerrado savannah a biome threatened with deforestation and climate change In the face of these environmental threats Canela women and men work to maintain riverbank and forest gardens and care for their growing crops whom they consider to be literally children This nurturing loving relationship between people and plants which offers a thought provoking model for supporting multispecies survival and well being throughout the world is the focus of **Plant Kin** Theresa L. Miller shows how kinship develops between Canela people and plants through intimate multi sensory and embodied relationships Using an approach she calls sensory ethnobotany Miller explores the Canela bio sociocultural life world including Canela landscape aesthetics ethnobotanical classification mythical storytelling historical and modern day gardening practices transmission of

ecological knowledge through an education of affection for plant kin shamanic engagements with plant friends and lovers and myriad other human nonhuman experiences This multispecies ethnography reveals the transformations of Canela human environment and human plant engagements over the past two centuries and envisions possible futures for this Indigenous multispecies community as it reckons with the rapid environmental and climatic changes facing the Brazilian Cerrado as the Anthropocene epoch unfolds *Plant and Human Health, Volume 1* Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1.4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focusses on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture **Maize for the Gods** Michael Blake, 2015-08-28 Maize is the world's most productive food and industrial crop grown in more than 160 countries and on every continent except Antarctica If by some catastrophe maize were to disappear from our food supply chain vast numbers of people would starve and global economies would rapidly

collapse How did we come to be so dependent on this one plant Maize for the Gods brings together new research by archaeologists archaeobotanists plant geneticists and a host of other specialists to explore the complex ways that this single plant and the peoples who domesticated it came to be inextricably entangled with one another over the past nine millennia Tracing maize from its first appearance and domestication in ancient campsites and settlements in Mexico to its intercontinental journey through most of North and South America this history also tells the story of the artistic creativity technological prowess and social political and economic resilience of America's first peoples
