Recent Advances in Density Functional Methods Delano Pun Chong,1995

Of all the different areas in computational chemistry density functional theory DFT enjoys the most rapid development Even at the level of the local density approximation LDA which is computationally less demanding DFT can usually provide better

answers than Hartree Fock formalism for large systems such as clusters and solids For atoms and molecules the results from DFT often rival those obtained by ab initio quantum chemistry partly because larger basis sets can be used Such encouraging results have in turn stimulated workers to further investigate the formal theory as well as the computational methodology of DFT This volume contains ten contributions from active workers in DFT covering topics from basic principles to methodology to applications In the Foreword Prof Walter Kohn gives his perspective on the recent advances in DFT Because DFT is being developed in so many different directions no single volume can provide a complete review of DFT However this volume will help both beginners and experimentalists to read the growing DFT literature more easily
