

S_N1 / S_N2 / E1 / E2 Reactions of Alcohols

Alcohols can participate in substitution and elimination reactions

BUT... HO^- is a poor leaving group, so in order for alcohols to be **substrates**, acid must be added (*to give the better leaving group OH_2^+*)

R-OH is a poor nucleophile, so adding **base** gives the **alkoxide** RO^- that is a much better nucleophile

In each of these reactions, you're given the first step. **Draw what happens next!**

Reactions To The Master:

Reactions to the Master Francis Ames-Lewis, 2017-09-29 The immense effect that Michelangelo had on many artists working in the sixteenth century is widely acknowledged by historians of Italian Renaissance art Yet until recently greater stress has been placed on the individuality of these artists styles and interpretation rather than on the elucidation of their debts to others There has been little direct focus on the ways in which later sixteenth century artists actually confronted Michelangelo or how those areas or aspects of their artistic production that are most closely related to his reveal their attitudes and responses to Michelangelo s work Reactions to the Master presents the first coherent study of the influence exerted by Michelangelo s work in painting and sculpture on artists of the late Renaissance period including Alessandro Allori Agnolo Bronzino Battista Franco Francesco Parmigianino Jacopo Pontormo Francesco Salviati Raphael Giorgio Vasari Marcello Venusti and Alessandro Vittoria The essays focus on the direct relations such as copies and borrowings previously underrated by art historians but which here form significant keys to understanding the aesthetic attitudes and broader issues of theory advanced at the time

Applied Stochastic Processes G.

Adomian,2014-05-09 Applied Stochastic Processes is a collection of papers dealing with stochastic processes stochastic equations and their applications in many fields of science One paper discusses stochastic systems involving randomness in the system itself that can be a large dynamical multi input multi output system Examples of a large system are the national economy of a major country or when an acoustic wave is propagating as in the atmosphere ocean or sea Another paper proves that only the average properties of the molecules of biology can be measured with precision in the test tube and disputes a simplistic model of the cell as defined by a miniature Laplace's universe The paper notes that the way existing cells are constructed implies that quantum mechanical principles lead to certain questions about simple experiments having only statistical answers Another paper addresses the detection of distributed fluctuating targets in a reverberation limited randomly time and space varying transmission media This approach is done by using the concepts of random Green's functions and the stochastic Green's function The collection will prove useful for cellular researchers mathematicians physicist engineers and academicians in the field of applied mathematics statistics and chemistry
