Reactive Extraction:

Reactive Extraction Hans-Jörg Bart, 2013-04-17 This booklet is designed to bridge the gap between handbooks and technical literature and aims at graduate students or experienced readers Commercial flow sheeting simulation software is increasingly available and is used in the early steps of process design in industry As to this more sophisticated and precise models based on activities instead of concentrations should be used After an introductory chapter there is in Chapter 2 an intensive discussion of reactive phase equilibria of ionic and non ionic solutes based on chemical potentials Chapter 3 introduces to multicomponent diffusion and mass transfer However the main focus is on the reactive mass transfer on rigid and mobile surfaces where the interfacial reaction molecular diffusion and adsorption layers are decisive The respective extraction of zinc with a cation exchanger and of acetic acid with an anion exchanger is discussed as case studies Since adsorption layers and surfactants have a major impact on liquid liquid extraction efficiency the final chapter reviews several techniques which make use of polymeric species in an extractive process A short review is also given on extraction apparatus and the hydrodynamics hydraulic design droplet population balances of columns Much of the booklet is based on the PhD works of C Czapla 2000 G Modes 2000 H Klocker 1996 T Kronberger 1995 M Marters 2000 M Roos 2000 M Traving 2000 and B Wachter 1996 who I wish to thank for their fruitful contributions Mass Transfer A. BIOSPERATIONS B. SIVASANKAR, 2005-01-01 This systematically organized and well balanced book compresses within the covers of a single volume the theoretical principles and techniques involved in bio separations also called downstream processing These techniques are derived from a range of subjects for example physical chemistry analytical chemistry bio chemistry biological science and chemical engineering Organized in its 15 chapters the text covers in the first few chapters topics related to chemical engineering unit operations such as filtration centrifugation adsorption extraction and membrane separation as applied to bioseparations The use of chromatography as practiced at laboratory as well as industrial scale operation and related techniques such as gel filtration affinity and pseudoaffinity chromatography ion exchange chromatography electrophoresis and related methods have been discussed The important applications of these techniques have also been highlighted *The Fundamentals of Process Intensification* Andrzej Stankiewicz, Tom Van Gerven, Georgios Stefanidis, 2019-09-16 This advanced textbook covering the fundamentals and industry applications of process intensification PI discusses both the theoretical and conceptual basis of the discipline Since interdisciplinarity is a key feature of PI the material contained in the book reaches far beyond the classical area of chemical engineering Developments in other relevant disciplines such as chemistry catalysis energy technology applied physics electronics and materials science are extensively described and discussed while maintaining a chemical engineering perspective Divided into three major parts the first introduces the PI principles in detail and illustrates them using practical examples The second part is entirely devoted to fundamental approaches of PI in four domains spatial thermodynamic functional and temporal The third and final part explores the methodology for applying fundamental PI approaches in practice As well as detailing technologies the book focuses on safety energy and environmental issues giving guidance on how to incorporate PI in plant design and operation safely efficiently and effectively **18th European Symposium on Computer Aided Process Engineering** Bertrand Braunschweig, Xavier Joulia, 2008-06-18 Plenary Lectures Topic 1 Off Line Systems Topic 2 On Line Systems Topic 3 Computational Numerical Solutions Strategies Topic 4 Integrated And Multiscale Modelling And Simulation Topic 5 Cape For The Users Topic 6 Cape And Society Topic 7 Cape In Education *Integrated Reaction and Separation Operations* Henner Schmidt-Traub, Andrzej Gorak, 2007-12-29 Economic needs as well as ecological demands are major driving forces in improving chemical processes and plants To meet these goals processes have to be intensified in order to get products of higher quality to increase yield by reducing or even suppressing by products and to minimise energy consumption A preferred principle for such intensifications is process tegration especially integration of reaction and separation operations S entific research in this field has been boosted by certain extremely succe ful examples like the Eastman Kodak process for methyl acetate or the MTBE process which are milestones for this method In 2002 the German Research Foundation defined process integration as one of the major search topics for the next decade In 1998 the Department of Biochemical and

Chemical Engineering at the University of Dortmund decided to pool its activities for concerted efforts in process integration and to form a joint research cluster. Our interest was to find out the general challenges as well as obstacles of integrated processes and to work out methods for their design and valuation. Soon it became clear that theoretical work only cannot give reasonable answers.

Intensification of Biobased Processes Andrzej Górak, Andrzej Stankiewicz, 2018-06-18 In recent years bioprocessing has increased in popularity and importance; however, bioprocessing still poses various important technological, economic, and environmental challenges such as product yields, excessive energy consumption for separations in highly watery systems, batch operation, or the downstream processing bottlenecks in the production of biopharmaceutical products. Many of those challenges can be addressed by application of different process intensification technologies discussed in the present book. The first book dedicated entirely to this area, *Intensification of Biobased Processes*, provides a comprehensive overview of modern process intensification technologies used in bioprocessing. The book focusses on four different categories of biobased products: bio fuels and platform chemicals, cosmeceuticals, food products, and polymers and advanced materials. It will cover various intensification aspects of the processes concerned, including bio reactor intensification, intensification of separation, recovery, and formulation operations, and process integration. This is an invaluable source of information for researchers and industrialists working in chemical engineering, biotechnology, and process engineering.

Bioprocess Engineering Shijie Liu, 2020-04-07 *Bioprocess Engineering: Kinetics, Sustainability, and Reactor Design*, Third Edition, is a systematic and comprehensive textbook on bioprocess kinetics, molecular transformation, bioprocess systems, sustainability, and reaction engineering. The book reviews the relevant fundamentals of chemical kinetics, batch and continuous reactors, biochemistry, microbiology, molecular biology, reaction engineering, and bioprocess systems engineering, introducing key principles that enable bioprocess engineers to engage in the analysis, optimization, selection of cultivation methods, design, and consistent control over molecular, biological, and chemical transformations. The quantitative treatment of bioprocesses is the central theme in this text; however, more advanced techniques and applications are also covered. Includes biological molecules and chemical reaction basics, cell biology, and genetic engineering. Describes kinetics and catalysis at molecular and cellular levels, along with the principles of fermentation. Covers advanced topics and treatises in interactive enzyme and molecular regulations, also covering solid catalysis. Explores bioprocess kinetics, mass transfer effects, reactor analysis, control, and design.

Valorization of Biomass to Value-Added Commodities Michael O. Daramola, Augustine O. Ayeni, 2020-04-21 This book presents the most up-to-date technologies for the transformation of biomass into valuable fuels, chemicals, materials, and products. It provides comprehensive coverage of the characterization and fractionation of various types of biomass and details the many challenges that are currently encountered during this process.
