Reading And The Psychology Of Perception:

Reading and the Psychology of Perception Hunter Diack, 1969 *Reading as a Perceptual Process* A. Kennedy, D. Heller, J. Pynte, Ralph Radach, 2000-08-04 This book is divided into five sections dealing with various fundamental issues in current research attention information processing and eye movement control the role of phonology in reading syntax and discourse processing and computational models and simulations Control and measurement of eye movements form a prominent theme in the book A full understanding of the where and when of eye movement control is a prerequisite of any complete theory of reading since it is precisely at this point that perceptual and cognitive processes interact Amongst the hot topics included are the relation between parafoveal and foveal visual processing of linguistic information the role of phonology in fluent reading and the emergence of statistical tuning approaches to sentence parsing Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory building and a quantum step in the maturation of reading research Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus near Marseilles All contributions summarise the state of the art in the relevant areas of reading research Basic Processes in Reading David LaBerge, S. Jay Samuels, 2017-03-27 Originally published in 1977 this volume contains the most recent theoretical views and experimental findings by prominent psychologists at the time working in areas they considered to be most basic to the reading processes The material will still be of value to people interested in applied and basic aspects of reading as well as those concerned with language processing and information processing in general The volume divides conveniently into two areas perception and comprehension The initial chapters deal with the perceptual processes involved in reading The second half of the volume delves into the area of comprehension The interested reader will find a wide variety of topics covered in the volume that reflect the amazingly wide range of cognitive functions that are part of the reading process Perception of Print Ovid J.L. Tzeng, Harry Singer, 2017-03-27 In the late 1970s reading research had become a true interdisciplinary endeavour with flavours of anthropology artificial intelligence cognitive psychology educational psychology linguistics neuroscience and instructional technology Given appropriate integration results from these diverse perspectives can enhance our understanding of reading behaviour tremendously both in its acquisition and in its skilled functioning Thus the enthusiasm for such interdisciplinary interaction had been quite intense for some time In the years before publication the National Reading Conference had been doing everything possible to accelerate this interaction Originally published in 1981 the chapters in this book are the fruits of that effort The research focuses on specifying skills in identifying alphabetical elements and the rules that govern their combination on constructing models that characterize the recognition of individual words and the interpretation of texts and on discovering what factors are responsible for blocking the normal acquisition process in many children Chapters 2 to 12 of this book reflect these changing foci They are

nevertheless sandwiched by two chapters that deal with the historical background and future outlook of reading instruction

Eye Guidance in Reading and Scene Perception G. Underwood, 1998-07-16 The distinguished contributors to this volume have been set the problem of describing how we know where to move our eyes There is a great deal of current interest in the use of eye movement recordings to investigate various mental processes The common theme is that variations in eye movements indicate variations in the processing of what is being perceived whether in reading driving or scene perception However a number of problems of interpretation are now emerging and this edited volume sets out to address these problems The book investigates controversies concerning the variations in eye movements associated with reading ability concerning the extent to which text is used by the guidance mechanism while reading concerning the relationship between eye movements and the control of other body movements the relationship between what is inspected and what is perceived and concerning the role of visual control attention in the acquisition of complex perceptual motor skills in addition to the nature of the guidance mechanism itself The origins of the volume are in discussions held at a meeting of the European Society for Cognitive Psychology ESCOP that was held in Wurzburg in September 1996 The discussions concerned the landing effect in reading an effect that if substantiated would provide evidence of the use of parafoveal information in eye guidance and these discussions were explored in more detail at a small meeting in Chamonix in February 1997 Many of the contributors to this volume were present at the meeting but the arguments were not resolved in Chamonix either Other leaders in the field were invited to contribute to the discussion and this volume is the product The argument remains unresolved but the problem is certainly clearer

The Psychology of Reading Keith Rayner, Alexander Pollatsek, 2013-10-14 The last 20 years have witnessed a revolution in reading research Cognitive psychologists using high speed computers to aid in the collection and analysis of data have developed tools that have begun to answer questions that were previously thought unanswerable These tools allow for a chronometric or moment to moment analysis of the reading process Foremost among them is the use of the record of eye movements to help reveal the underlying perceptual and cognitive processes of reading This volume provides a coherent framework for the research accomplished on the reading

process over the past 15 years It emphasizes how readers go about extracting information from the printed page and how they comprehend the text Basic Functions of Language, Reading and Reading Disability Evelin Witruk,Angela D. researchers from various disciplines with an interest to use eye tracking to study perceptual and higher order cognitive functions The contents of the book faithfully reflect the scope and diversity of interest in eye tracking as a fruitful tool both in basic and applied research It consists of five sections visual information processing and saccadic eye movements empirical studies of reading and language production computational models of eye movements in reading eye tracking as a tool to study human computer interaction and eye movement applications in media and communication research Each section is concluded by a commentary chapter by one of the leading authorities in the field These commentaries discuss and integrate the contributions in the section and provide an expert view on the most significant present and future developments in the respective areas The book is a reference volume including a large body of new empirical work but also principal theoretical viewpoints of leading research groups in the field
