use in deriving and printing logarithmic and other tables used in the shipping industry At that time such tables were often inaccurate copied carelessly and had been instrumental in causing a number of maritime disasters Babbage's machine called a Difference Engine because it performed its calculations using the principle of partial differences was intended to substantially reduce the number of errors made by humans calculating the tables Babbage had also designed but never built a forerunner of the modern printer which would also reduce the number of errors admitted during the transcription of the results Nowadays a system implemented to perform the function of Babbage's engine would be classed as safety critical That is the failure of the system to produce correct results could result in the loss of human life mass destruction of property in the form of ships and cargo as well as financial losses and loss of competitive advantage for the shipping firm Real Time UML Bruce Powel Douglass, 2004 Covers UML 2.0 *Languages, Compilers, and Tools for Embedded Systems* Jack Davidson, Sang Lyul Min, 2003-06-29 This volume contains the proceedings of the ACM SIGPLAN Workshop on Languages Compilers and Tools for Embedded Systems LCTES 2000 held June 18 2000 in Vancouver Canada Embedded systems have developed considerably in the past decade and we expect this technology to become even more important in computer science and engineering in the new millennium Interest in the workshop has been confirmed by the submission of papers from all over the world There were 43 submissions representing more than 14 countries Each submitted paper was reviewed by at least three members of the program committee The expert opinions of many outside reviewers were invaluable in making the selections and ensuring the high quality of the program for which we express our sincere gratitude The final program features one invited talk twelve presentations and twelve poster presentations which reflect recent advances in formal systems compilers tools and hardware for embedded systems We owe a great deal of thanks to the authors reviewers and the members of the program committee for making the workshop a success Special thanks to Jim Larus the General Chair of PLDI 2000 and Julie Goetz of ACM for all their help and support Thanks should also be given to Sung Soo Lim at Seoul National University for his help in coordinating the paper submission and review process We also thank Professor Gaetano Borriello of the University of Washington for his invited talk on Chinook a hardware software co synthesis CAD tool for embedded systems
