Advances in Nonlinear Dynamics and Control: A Report from Russia Alexander B. Kurzhanski, 2012-12-06 The purpose of this volume is to present a coherent collection of overviews of recent Russian research in Control Theory and Nonlinear Dynamics written by active investigators in these fields It is needless to say that the contribution of the scientists of the former Soviet Union to the development of nonlinear dynamics and control was significant and that their scientific schools and research community have highly evolved points of view accents and depth which complemented enhanced and sometimes inspired research directions in the West With scientific exchange strongly increasing there is still a considerable number of Eastern publications unknown to the Western community We have therefore encouraged the authors to produce extended bibliographies in their papers The particular emphasis of this volume is on the treatment of uncertain systems in a deterministic setting a field highly developed in the former Soviet Union and actively investigated in the West The topics are concentrated around the three main branches of uncertain dynamics which are the theory of Differential Games the set membership approach to Evolution Estimation and Control and the theory of Robust Stabilization The application of these techniques to nonlinear systems as well as the global optimization of the latter are also among the issues treated in this volume
