Oceanography and Marine Biology, An Annual Review, Volume 39 R. N. Gibson,2001-07-19 Interest in oceanography and marine biology and the relevance of those fields to global environmental issues creates a demand for authoritative reviews that summarize recent research Oceanography and Marine Biology an Annual Review has catered to this demand since its foundation by the late Harold Barnes more than 35 years ago It is an annual

Post Treatments of Anaerobically Treated Effluents Vinay Kumar Tyagi,Abid Ali Khan,Ng Wun Jern,Anwar Khursheed,A. A. Kazmi,2019-06-15 The anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated However the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens This has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment This book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery Coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards The resource recovery angle is particularly interesting as this can arguably help achieve the circular economy It is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and

possible alternative approaches to the commonly applied post treatment techniques The succeeding discussion is intended to lead on to identification of opportunities for further research and development This book can be used as a standard reference book and textbook in universities for Master and Doctoral students The academic community relevant to the subject namely faculty researchers scientists and practicing engineers will find the book both informative and as a useful source of successful case studies

Polymers in a Marine Environment Mukesh Doble, 2014-11-19 Polymers plastics and composite materials are widely used in the shipping industry and so get exposed to marine waters Biofouling of these leads to problems for ships and boats in the form of reduced speed and corrosion which these industries would like to prevent Several hundred thousand tons of plastics that are discarded reach the marine environment every year either from land run off or because of maritime activities It has been estimated that because plastics do not degrade easily one million marine animals are killed every year either by choking on floating plastic items or by becoming entangled in plastic debris For the shipping industry the polymer should not foul and should be stable for extended periods of time in the marine environment For the environmentalist the waste dumped after its use should degrade fast without causing problems to flora and fauna as well to the coastal economies Addressing one of these issues leads to enhancement of the other issue and so this is not an easy problem to solve This book covers the interaction of polymers with the marine environment the problems they cause to ecology their biofouling and biodegradation and possible solutions

Reproductive Strategies and Developmental Patterns in Annelids Adriaan W.C. Dorresteyn, Wilfried Westheide, 2013-04-18 The fascination of the Annelida to scientists lies in the beauty of their structures and the functionality of their body plan the tremendous adaptive radiation which has made it possible for these animals to colonize almost all marine limnic and terrestrial biotopes In doing so they have evolved a great variety of life forms and their reproduction and development are correspondingly diverse with many modes and patterns unique in the animal kingdom In this special volume recent progress in this broad research area is presented by 26 specialists in general through surveys or treatments of selected examples Some of them review important annelid taxa such as the Nereididae Syllidae Spionidae Cirratulidae Clitellata and Pogonophora others analyse reproductive and developmental structures and phenomena in annelids e g segmental organs sex pheromones oogenesis mating systems sperm types life cycles larval settlement cleavage and symmetry of embryos or discuss controversial approaches to annelid systematics The book will be of interest to all zoologists who work with annelids as well as to embryologists and other researchers in reproductive biology
