Receptor Modeling In Environmental Chemistry:

Receptor Modeling in Environmental Chemistry (Volume 76). Hopke PK.,1985 Chemometrics in Environmental Chemistry - Applications Jürgen Einax,2013-06-29 Pattern recognition and other chemometrical techniques are important tools in interpreting environmental data This volume presents authoritatively state of the art applications of measuring and handling environmental data The chapters are written by leading experts **Receptor Modeling in Environmental Chemistry** Philip K. Hopke,1985-04-10 The first book to comprehensively review the rapidly growing field of receptor modeling It systematically presents the analytical and mathematical methods that have been developed and used to characterize airborne particulate matter and to identify its sources The techniques described can be applied to a variety of problems since the measured properties in a particular system can be related to the sum of independently contributing causal factors The book features an introduction to matrix algebra and several important concepts in numerical analysis including the singular value decompositions *Receptor Modeling for Air Quality Management* P.K. Hopke,1991-06-03 This book presents the background and application of receptor models for the source identification and quantitative mass apportionment of airborne pollutants Over the past decade receptor models have become an accepted part of the process for developing effective and efficient air quality management plans Information is provided on the ambient and source sampling and chemical analysis needed to provide the input data for receptor models Commonly used models are described with examples so that the air quality specialist can see how these models are applied Recent advances in several areas of the field are presented as well as the perspective of both U S Federal and State level air quality managers on how these models fit into the development of a management plan The aim of the book is to provide a practical guide to persons who may be given the task of implementing receptor modeling as a part of some air quality management problem The intention of all the chapter authors is to furnish both the basic information needed to begin doing receptor modeling as well as some insight into some of the problems related to the use of these models These tools like any others used in solving complex technological problems are not a panacea but do represent powerful aids in data analysis that can lead to insights as to how an airshed functions and thus to effective and efficient air quality management strategies **Modelling of Pollutants in Complex Environmental Systems** Grady Hanrahan,2010 Environmental modelling has enjoyed a long tradition but there is a defined need to continually address both the power and the limitations of such models as well as their quantitative assessment This book showcases modern environmental modelling methods the basic theory behind them and their incorporation into complex environmental investigations It highlights advanced computing technologies and how they have led to unprecedented and adaptive modelling simulation and decision support tools to study complex environmental systems and how they can be applied to current environmental concerns This volume is essential reading for researchers in academia industry and government related bodies who have a vested interest in all aspects of environmental modelling Features

include A range of modern environmental modelling techniques are described by experts from around the world including the USA Canada Australia Europe and Thailand many examples from air water soil sediment and biological matrices are covered in detail throughout the book key chapters are included on modelling uncertainty and sensitivity analysis and a selection of figures are provided in full colour to enable greater comprehension of the topics discussed **Atmospheric Chemistry and**

Physics John H. Seinfeld, Spyros N. Pandis, 2016-03-29 Expanded and updated with new findings and new features New chapter on Global Climate providing a self contained treatment of climate forcing feedbacks and climate sensitivity New chapter on Atmospheric Organic Aerosols and new treatment of the statistical method of Positive Matrix Factorization Updated treatments of physical meteorology atmospheric nucleation aerosol cloud relationships chemistry of biogenic hydrocarbons Each topic developed from the fundamental science to the point of application to real world problems New problems at an introductory level to aid in classroom teaching **Methods in Environmental Forensics** Stephen M.

Mudge, 2008-07-14 While environmental catastrophes can be naturally occurring often they are the result of criminal intent or malfeasance Sorting out the details when the land itself is the only witness requires a special set of investigative skills For accountability to be established investigators must be able to answer these questions with a measure of scient

Elemental Analysis of Airborne Particles Marsha Creatchman, 2024-12-06 An increased standard of living in developed and developing countries has brought about a distinct rise in pollution The problem of air pollution has specifically increased the public s awareness of the environmental and health related consequences resulting from modern day industrial technology This detailed collection of works devoted to the most popular methods in elemental analysis of airborne particles offers investigators a comprehensive book on the most common laboratory analytical methods currently used in trace element analysis Discussed are atomic absorption spectrometry inductively coupled plasma atomic emission particle induced gamma ray analysis particle elastic scattering and Rutherford backscattering and neutron activation analysis Specific sections on quality assurance quality control and source receptor modeling have also been included Chemistry for the
