

RELIGIOUS EXPLANATIONS: A MODEL FROM THE SCIENCES BY EDWARD L. SCHOEN

Ernan McMullin

The author of a forthright recent book¹ tells us that he is engaged "in the struggle to show not only that religious truth claims can be patterned along strictly scientific lines, but also that such claims are capable of meeting rigorously scientific standards for theoretical adequacy" (p. viii). Edward Schoen's aim is the "cognitive rehabilitation of religious discourse" in the face of modern skeptical attack (p. ix). The "cognitive integrity" of religion is to be secured by showing that religious discourse "may be used successfully to provide explanations strictly parallel with those offered in the sciences" (p. 23). This, he insists over and over, is what is required to "salvage effectively the cognitive respectability of religious discourse" (p. 127).

Schoen is well aware that he travels a lonely road. Even those "religious theorists" (his label for the audience he is addressing) who are most sympathetic to analogies between science and religion, he suggests, always suffer in the end from failure of nerve. He chides Basil Mitchell, Fred Ferré and Ian Ramsey, for example, because they are "convinced that any attempt to provide religious explanations of a rigorously scientific type must be abandoned as a hopelessly impossible task" (p. 79). It is just this task that he considers essential; religion must be shown "capable of the same kinds of explanations as can be offered by the sciences," if it is to survive the potent challenge of critics like Huxley, Freud or Kai Nielsen (p. 22).

Ian Barbour is the author who comes closest to drawing the desired parallel between the modes of explanation in religion and science (p. 25). But Schoen argues that the notion of metaphor to which Barbour constantly returns is too weak. It leads Barbour to deny that theories and their associated models can be a "literal picture of the world" (p. 27). Whereas for Schoen, (partially) literal pictures are just what successful theories are. Though theory relies on analogy, the analogy can function properly only if it rests ultimately on univocal predication of at least some features. Still, Schoen affirms that his "general strategy for rehabilitating the cognitive integrity of religious discourse" will be exactly the same as Barbour's (p. 34), except that vague notions like *metaphor* and *symbolic construct* will be avoided because they permit the desired parallel between religious and scientific explanation to become too hazy.

Finnegan,David H. Glass,Mikael Leidenhag,David N. Livingstone,2023-02-28 This book investigates the nature and relevance of conjunctive explanations in the context of science and religion It explores questions concerning how scientific and religious explanations for features of the world or phenomena within it relate to each other and whether they might work together in mutually enriching ways The chapters address topics including the relationship between Darwinian and teleological explanations non reductive explanations of mind and consciousness and explanations of Christian faith and religious experience while others explore theological and philosophical issues concerning the nature and feasibility of conjunctive explanations Overall the contributions help to provide conceptual clarity on how scientific and religious explanations might or might not work together conjunctively as well as exploring how these ideas relate to specific topics in science and religion more generally

Scientific Models for Religious Knowledge Andrew Ralls Woodward,2018-08-14 Most comparisons of science and religion are really comparisons of science and Christianity or science and Islam and so forth In Scientific Models for Religious Knowledge the author aims to get outside typical polarized debates between traditional a priori theism and radical scientific naturalism Instead a new science and religion compatibility system between a scientific study of religion and a religious epistemology is our new elusive problem Moreover we shall look at a comparison and contrast of modern science with the simple deference of the human mind to the actions of culturally postulated superhuman agents This book pays critical attention to the contributions of scholars in the philosophy of religion the philosophy of science and the scientific study of religion Scientific Models for Religious Knowledge is useful for readers looking to expand their learning in the philosophies of science and religion as these subjects are taught and analyzed in modern research universities **Essays in Postfoundationalist Theology** Jacobus Wentzel Van Huyssteen,Wentzel Van Huyssteen,1997 This collection of essays boldly addresses many of the challenges faced by Christian theology in the context of contemporary postmodern thought Handling abstract topics in a remarkably clear and concise way J Wentzel van Huyssteen presses the case for a postfoundationalist theology as a viable third option beyond the extremes of foundationalism and nonfoundationalism Van Huyssteen discusses themes related to rationality epistemology and philosophy of science In the process he critically engages the work of such thinkers as Wolfhart Pannenberg Nancey Murphy Jerome Stone and Gerd Theissen The result is a

convincing argument that only a truly accessible and philosophically credible notion of interdisciplinarity will be able to pave the way for a plausible public theology that can play an important intellectual role in our fragmented culture today

When Religious Faith Collides with Science Jan M. Long, 2016-08-17 A 2014 Gallup Poll indicated that 26 percent of Americans believe that humans came into existence less than 10 000 years ago with a much larger 37 percent believing the world was created in six 24 hour days Those percentages represent around 83 million and 118 million people respectively suggesting these to be ideas that resonate with a large swath of the population Given the prevalence of such thinking the question looms Is it possible that so many people could be wrong or is science simply mistaken about some of these matters This book is very much about the importance process plays in the conclusions that are reachable with Jan Long proposing that process itself can answer such questions doing so in a way that offers credibility He proposes that process entails a set of well established rules for how knowledge is acquired and these can help guide the formation of a sacred construct about beginnings In the final analysis it is a process that seeks to replace dogmatic thinking with humble and tentative expressions about that which is knowable about the many mysteries of reality that convey to sentient beings awe and wonder

New Models of Religious Understanding Fiona Ellis, 2018 What does it mean to understand the world religiously How is such understanding to be distinguished from scientific understanding What does it have to do with religious practice transfiguring love and spiritual well being New Models of Religious Understanding investigates these questions to set a new and exciting agenda for philosophy of religion Featuring contributions from leading scholars in the field the volume cuts across the supposed divide between analytic and continental approaches to the subject and engages the interest of a broad range of philosophical and theological readers

The Cognitive Science of Religion James A. Van Slyke, 2016-03-23 The cognitive science of religion is a

relatively new academic field in the study of the origins and causes of religious belief and behaviour The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs However many theologians and religious scholars are concerned that this perspective will reduce and replace explanations based in religious traditions beliefs and values This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion

belief once in the domain of the humanities has found a new home in the sciences Promising new developments in the study of religion by cognitive scientists and evolutionary theorists put forward empirical hypotheses regarding the origin spread and character of religious beliefs Different theories deal with different aspects of human religiosity some focus on religious beliefs while others focus on religious actions and still others on the origin of religious ideas While these theories might share a similar focus there is plenty of disagreement in the explanations they offer This volume examines the diversity of new scientific theories of religion by outlining the logical and causal relationships between these enterprises Are they truly in competition as their proponents sometimes suggest or are they complementary and mutually illuminating accounts of religious belief and practice Cognitive science has gained much from an interdisciplinary focus on mental function and this volume explores the benefits that can be gained from a similar approach to the scientific study of religion

Cognitive Science and the New Testament István Czachesz, 2017 Over the last few decades our knowledge of how the human mind and brain works increased dramatically The field of cognitive science enables us to understand religious traditions rituals and visionary experiences in novel ways This has implications for the study of the New Testament and early Christianity How people in the ancient Mediterranean world remembered sayings and stories what they experienced when participating in rituals how they thought about magic and miracle and how they felt and reasoned about moral questions all of that can be now better understood with the help of insights from cognitive science Istvan Czachesz argues that the field of New Testament Studies witnesses the beginning of a cognitive turn He surveys relevant developments in the Cognitive Science of Religion and explores the field of cognitive and behavioral sciences in search of opportunities of gaining new insights about biblical materials Czachesz presents some methodological tools and initial steps together with a large number of examples of applying the cognitive approach to the New Testament and related ancient literature
