Remembering Pe We:

Remembering Donald G. MacKay, 2019 This book summarizes the results of a revolution in the scientific understanding of memory mind and brain that began in 1953 when a twenty seven year old man underwent brain surgery to remedy life threatening epilepsy His name was Henry Molaison but until recently the general public knew him only as H M Henry's operation inadvertently destroyed his hippocampus the brain's engine for forming new memories He suffered catastrophic memory failures for the rest of his life Henry soon became the most studied amnesiac patient in the history of the world and also the most famous Dr MacKay worked with Henry for fifty years This book focuses primarily on the lessons of the still ongoing revolution that Henry inspired for readers wishing to maintain the everyday functioning of their memory mind and brain The research done with Henry has shown how to keep memory sharp at any age and acquire ways to offset the degradation that aging and infrequent use inflict on memory It has also given scientists insights into the different types of memory for example memories of events facts skills words and visual experiences and the likelihood of forgetting each type of memory Finally it has revealed the profound importance of memory memory decline impacts even such seemingly unrelated aspects of mind as the ability to plan to comprehend to detect and correct errors to appreciate humor to perceive the visual world to imagine hypothetical events and to create novel ideas Written in an accessible style this engaging narrative combines personal vignettes into Henry's life with important new findings about memory and brain functions

The Diachrony of Differential Object Marking in Romanian Virginia Hill, Alexandru Mardale, 2021-06-15 This book provides a comprehensive investigation of the origins development and stabilization of differential object marking DOM in Romanian DOM a means by which a grammar distinguishes between objects based on semantic features such as animacy or definiteness has been a fruitful area of research in syntax historical linguistics and typology In this volume Virginia Hill and Alexandru Mardale demonstrate that Romanian DOM reflects a typological mix of Balkan and Romance patterns and is in fact composed of three distinct mechanisms Their analysis of these mechanisms reveals that DOM triggers in Romanian are located in the nominal domain in contrast to languages such as Spanish where they are located in the verbal domain The cross linguistic perspective adopted in the volume sheds light on existing typologies of DOM particularly in relation to the variation observed in the merging location of the DOM particle and of the doubling pronominal clitic

Basic and Applied Memory Research Douglas J. Herrmann, Cathy McEvoy, Chris Hertzog, Paula Hertel, Marcia K. Johnson, 2014-02-04 Basic researchers unlock the secrets of nature applied researchers unlock the means by which those secrets of nature can change people's lives Neither basic nor applied research has an independent impact These volumes examine the convergence of basic and applied research in the field of memory Volume 1 Theory and Context focuses on the methods for understanding and applying basic memory theory while Volume 2

Practical Applications expands the understanding of practical memory research by providing in depth research examples and findings. If the science of memory is to make a significant contribution to society, coordinating our basic and applied efforts and determining how they complement each other become of paramount importance. These volumes will help in this regard both as textbooks demonstrating how to investigate memory and apply basic memory theory and as reference sources leading to a better understanding of certain problems in basic and applied memory research. Readers of these volumes will gain a thorough grasp of the way major themes relate to basic and applied research, collaboration, how programmatic basic and applied research can be conducted on particular memory problems, and the manner in which basic and applied work in major problem areas has been incorporated into the field of memory. Both volumes present important information that will be indispensable to researchers and students alike.
