Remote Sensing, Second Edition Arthur P. Cracknell, 1991-08-12 Providing a full introduction to remote sensing for all environmental scientists this wide ranging and authoritative text assumes no prior knowledge of remote sensing yet covers the field in sufficient depth to be suitable also as a research manual **Space Oceanography: An Intensive Course**

Arthur P Cracknell, 1992-09-16 The advent of Earth observing satellites has revolutionised the gathering of oceanographic data and the visualisation of oceanographic processes This course was for postgraduate students and young post doctoral research workers and covered the instruments and satellite systems used to gather visible infrared and microwave data over the oceans It also covered the uses of these various types of data to provide information about ocean colour biological productivity surface temperature currents and circulation patterns near surface windspeeds bottom topography and the geoid **Ocean Colour: Theory and Applications in a Decade of CZCS Experience** Vittorio Barale, Peter M.

Schlittenhardt, 2012-12-06 Optical remote sensing is of invaluable help in understanding the marine environment and its biogeochemical and physical processes The Coastal Zone Color Scanner CZCS which operated on board the Nimbus 7 satellite from late 1978 to early 1986 has been the main source of ocean colour data Much work has been devoted to CZCS data processing and analysis techniques throughout the 1980s After a decade of experience the Productivity of the Global Ocean PGO Activity which was established in the framework of the International Space Year 1992 ISY 92 by SAFISY the Space Agency Forum of ISY sponsored a workshop aimed at providing a reference in ocean colour science and at promoting the full exploitation of the CZCS historical data in the field of biological oceanography The present volume comprises a series of state of the art contributions on theory applications and future perspectives of ocean colour After an introduction on the historical perspective of ocean colour a number of articles are devoted to the CZCS theoretical background on radiative transfer and in water topics as well as on calibration atmospheric correction and pigment concentration retrieval algorithms developed for the CZCS Further a review is given of major applications of CZCS data around the world carried out in the past decade The following part of the book is centered on the application of ocean colour to the assessment of marine biological information with particular regard to plankton biomass primary productivity and the coupling of physical biological models
