Machine Translation Sergei Nirenburg,1992 All over the world people are claiming their rights Are these claims prompted by similar values and aspirations And even if human rights are universal what are the consequences of claiming them in different historical cultural and material realities The diversity of African countries considered in this book compels careful thought about these questions   Intelligent Information Processing and Web Mining Mieczyslaw A. Klopotek,Slawomir T. Wierzchon,Krzysztof Trojanowski,2013-06-05 This volume contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS IIPWM 03 which was held in Zakopane Poland on June 2 5 2003 This conference extends a series of 12 successful symposia on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence The idea of organizing such meetings dates back to 1992 Our main in tention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators This idea proved to be attractive enough that we decided to continue such meetings As the years went by the workshops has transformed into regular symposia devoted to such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i e Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evo lutionary Algorithms At present about 50 papers prepared by researches from Poland and other countries are usually presented This year conference is an attempt to draw a much broader international audience on the one hand and to devote much more attention to the newest developments in the area of Artificial Intelligence Therefore special calls for contributions on artificial immune systems and search engines   Applications of Declarative Programming and Knowledge Management Dietmar Seipel,Michael Hanus,Ulrich Geske,Oskar Bartenstein,2005-04-01 This volume contains a selection of papers presented at the 15th International Conference on Applications of Declarative Programming and Knowledge M agement INAP 2004 and the 18th Workshop on Logic Programming WLP 2004 which were held jointly in Potsdam Germany from March 4th to 6th 2004 Declarative programming is an advanced paradigm for the modeling and solving of complex problems This speci cation method has become more and more attractive in recent years for example in the domains of databases for the processing of natural language for the modeling and processing of combinatorial problems and for establishing knowledge based systems for the Web The INAP conferences provide a forum for intensive discussions of appli tions of important technologies around logic programming constraint problem solving and closely related advanced software They comprehensively cover the impact of programmable logic solvers in the Internet society its underlying te nologies and leading edge applications in industry commerce government and social services The Workshops on Logic Programming are the annual meeting of the Society for Logic Programming GLP e V They bring together researchers

Terms in Context Jennifer Pearson,1998-01-01 Terms in Context applies the methodology that has been developed over the last two decades in corpus linguistics to the relatively new and still little developed field of corpus based terminography While corpora are already being used by some terminologists for the identification of terms and retrieval of contextual fragments this book describes the first attempt to use corpora for terminography in much the same way as large general reference corpora are already being used for general language lexicography The author goes beyond the standard problem of identifying terms as opposed to non terminological lexical items in text and focuses on identifying metalanguage patterns which point to the presence in text of parts of reusable definitions of terms The author examines these patterns and shows how the information which they contain can be retrieved and used as input for terminological entries Terms in Context should be of interest to traditional terminologists who have not previously considered adopting a corpus based approach to their work or at least not on the scale proposed here to modern terminologists who use text primarily for the identification of terms and the retrieval of contextual examples to those in the corpus linguistic community who have hitherto used general language corpora for the purposes of lexicography and have not previously considered using special purpose corpora for more specific lexicography studies and to academics in the ESP LSP community who are interested in showing students how to use text as a means of ascertaining the meaning of terms   **Information Retrieval Technology** Mohamed Vall Mohamed Salem,Khaled Shaalan,Farhad Oroumchian,Azadeh Shakery,Halim Khelalfa,2011-12-14 This book constitutes the refereed proceedings of the 7th Asia Information Retrieval Societies Conference AIRS 2011 held in Dubai United Arab Emirates in December 2011 The 31 revised full papers and 25 revised poster papers presented were carefully reviewed and selected from 132 submissions All current aspects of information retrieval in theory and practice are addressed the papers are organized in topical sections on information retrieval models and theories information retrieval applications and multimedia information retrieval user study information retrieval evaluation and interactive information retrieval Web information retrieval scalability and adversarial information retrieval machine learning for information retrieval natural language processing for information retrieval arabic script text processing and retrieval   **Predicative Forms in Natural Language and in Lexical Knowledge Bases** P. Saint-Dizier,2013-03-09 This volume is a selection of papers presented at a workshop entitled Predicative Forms in Natural Language and in Lexical Knowledge Bases organized in Toulouse in August 1996 A predicate is a named relation that exists among one or more arguments In natural language predicates are realized as verbs prepositions nouns and adjectives to cite the most frequent ones Research on the identification organization and semantic representa tion of predicates in artificial intelligence and in language processing is a very active research field The emergence of new paradigms in theoretical language processing the definition of new problems and the important evol ution

of applications have in fact stimulated much interest and debate on the role and nature of predicates in naturallangage From a broad theoret ical perspective the notion of predicate is central to research on the syntax semantics interface the generative lexicon the definition of ontology based semantic representations and the formation of verb semantic classes From a computational perspective the notion of predicate plays a cent ral role in a number of applications including the design of lexical knowledge bases the development of automatic indexing systems for the extraction of structured semantic representations and the creation of interlingual forms in machine translation **Robot Intelligence Technology and Applications 2** Jong-Hwan Kim,Eric T . Matson,Hyun Myung,Peter Xu,Fakhri Karray,2014-03-21 We are facing a new technological challenge on how to store and retrieve knowledge and manipulate intelligence for autonomous services by intelligent systems which should be capable of carrying out real world tasks autonomously To address this issue robot researchers have been developing intelligence technology InT for robots that think which is in the focus of this book The book covers all aspects of intelligence from perception at sensor level and reasoning at cognitive level to behavior planning at execution level for each low level segment of the machine It also presents the technologies for cognitive reasoning social interaction with humans behavior generation ability to cooperate with other robots ambience awareness and an artificial genome that can be passed on to other robots These technologies are to materialize cognitive intelligence social intelligence behavioral intelligence collective intelligence ambient intelligence and genetic intelligence The book aims at serving researchers and practitioners with a timely dissemination of the recent progress on robot intelligence technology and its applications based on a collection of papers presented at the at the 2nd International Conference on Robot Intelligence Technology and Applications RiTA held in Denver USA December 18 20 2013 **Routledge Encyclopedia of Translation Technology** Chan Sin-wai,2014-11-13 The Routledge Encyclopedia of Translation Technology provides a state of the art survey of the field of computer assisted translation It is the first definitive reference to provide a comprehensive overview of the general regional and topical aspects of this increasingly significant area of study The Encyclopedia is divided into three parts Part One presents general issues in translation technology such as its history and development translator training and various aspects of machine translation including a valuable case study of its teaching at a major university Part Two discusses national and regional developments in translation technology offering contributions covering the crucial territories of China Canada France Hong Kong Japan South Africa Taiwan the Netherlands and Belgium the United Kingdom and the United States Part Three evaluates specific matters in translation technology with entries focused on subjects such as alignment bitext computational lexicography corpus editing online translation subtitling and technology and translation management systems The Routledge Encyclopedia of Translation Technology draws on the expertise of over fifty contributors from around the world and an international panel of consultant editors to provide a selection of articles on the most pertinent topics in the discipline All the articles are self contained extensively cross referenced and include useful and up to date
