

The building blocks of the brain: **NEURONS**

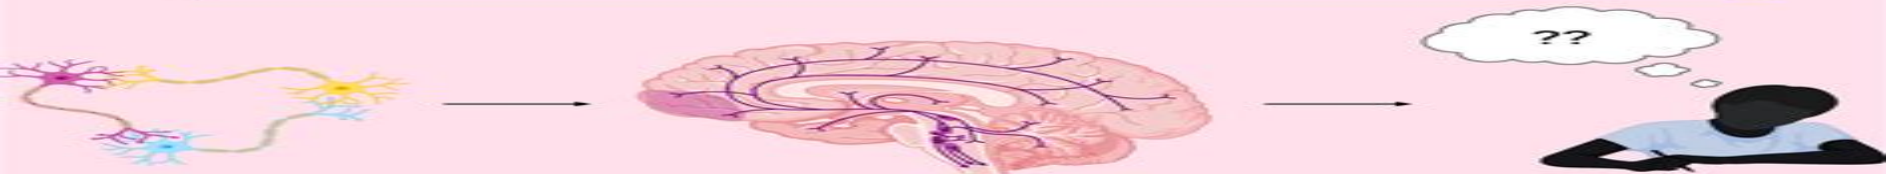

Neurons are the building blocks of the brain. They are specialized cells that can send and receive messages quickly to relay information.

Neurons "talk" to other neurons by sending electrical signals down their axons. When this signal reaches the end of the neuron, called the axon terminal, it causes the release of chemical messengers called neurotransmitters into a small space between cells called the synapse.

Once in the synapse, neurotransmitters bind to receptors on the dendrites of the next neuron to pass on information.

Many neurons interconnect in the brain to form networks of information that allow us to think, run, and exist everyday!
