Guérillot, Olivier Guillon, 1990-12 **Numerical Simulation in Oil Recovery** Mary Fanett Wheeler, 1988 The papers of this book are based on a Symposium on Numerical Simulation in Oil Recovery held at the Institute for Mathematics and its Applications The major research emphasis is on the modeling of fractures heterogeneities viscous fingering and diffusion dispersion effects in the flow in porous media This volume contains seventeen comprehensive papers on the latest developments in this exciting subject Its diverse presentation brings together the various disciplines of applied mathematics chemical engineering physics and hydrology Flow Control Max D. Gunzburger, 2012-12-06 The articles in this volume cover recent work in the area of flow control from the point of view of both engineers and mathematicians These writings are especially timely as they coincide with the emergence of the role of mathematics and systematic engineering analysis in flow control and optimization Recently this role has significantly expanded to the point where now sophisticated mathematical and computational tools are being increasingly applied to the control and optimization of fluid flows These articles document some important work that has gone on to influence the practical everyday design of flows moreover they represent the state of the art in the formulation analysis and computation of flow control problems This volume will be of interest to both applied mathematicians and to engineers **Modeling Transport Phenomena in Porous Media with Applications** Malay K. Das, Partha P. Mukherjee, K. Muralidhar, 2017-11-21 This book is an ensemble of six major chapters an introduction and a closure on modeling transport phenomena in porous media with applications Two of the six chapters explain the underlying theories whereas the rest focus on new applications Porous media transport is essentially a multi scale process Accordingly the related theory described in the second and third chapters covers both continuum and meso scale phenomena Examining the continuum formulation imparts rigor to the empirical porous media models while the mesoscopic model focuses on the physical processes within the pores Porous media models are discussed in the context of a few important engineering applications These include biomedical problems gas hydrate reservoirs regenerators and fuel cells The discussion reveals the strengths and weaknesses of existing models as well as future research directions **Computation and Applied Mathematics**, 2002 **Computation and Applied Mathematics**, 1998 **Fluid Flow and Transport in Porous Media, Mathematical and Numerical Treatment** Zhangxin Chen, Richard E. PREFACE Advances in resource recovery and confinement remediation of environmental hazards requires a coordinated interdisciplinary effort involving mathematicians scientists and engineers The intent of this collection of papers is to summarize recent theoretical computational and experimental advances in the theory of phenomena in porous media with the intent to identify similarities and differences concerning applications related to both resource recovery and confinement and remediation of environmental hazards

Numerical Treatment of Multiphase Flows in Porous Media Zhangxin Chen, Richard E. Ewing, Zhong-Ci Shi, 2008-01-11 The need to predict understand and optimize complex physical and chemical processes occurring in and around the earth such as groundwater contamination oil reservoir production discovering new oil reserves and ocean hydrodynamics has been increasingly recognized Despite their seemingly disparate natures these geoscience problems have many common mathematical and computational characteristics The techniques used to describe and study them are applicable across a broad range of areas The study of the above problems through physical experiments mathematical theory and computational techniques requires interdisciplinary collaboration between engineers mathematicians computational scientists and other researchers working in industry government laboratories and universities By bringing together such researchers meaningful progress can be made in predicting understanding and optimizing physical and chemical processes The International Workshop on Fluid Flow and Transport in Porous Media was successfully held in Beijing China August 26 1999 The aim of this workshop was to bring together applied mathematicians computational scientists and engineers working actively in the mathematical and numerical treatment of fluid flow and transport in porous media A broad range of researchers presented papers and discussed both problems and current state of the art techniques

Mathematical Aspects of Scientific Software J.R. Rice, 2012-12-06 Since scientific software is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools

Discrete Event Systems, Manufacturing Systems, and Communication Networks

P.R. Kumar,P.P. Varaiya,2012-12-06 This IMA Volume in Mathematics and its Applications DISCRETE EVENT SYSTEMS MANUFACTURING SYSTEMS AND COMMUNICATION NETWORKS is based on the proceedings of a workshop that was an integral part of the 1992 93 IMA program on Control Theory The study of discrete event dynamical systems DEDS has become rapidly popular among researchers in systems and control in communication networks in manufacturing and in distributed computing This development has created problems for re searchers and potential consumers of the research The first problem is the veritable Babel of languages formalisms and approaches which makes it very difficult to determine the commonalities and distinctions among the competing schools of approaches The second related problem arises from the different traditions paradigms values and experience that scholars bring to their study of DEDS depending on whether they come from control com munication computer science or mathematical logic As a result intellectual exchange among scholars becomes compromised by unexplicated assumptions The purpose of the Workshop was to promote exchange among scholars representing some of the major schools of thought in DEDS with the hope that 1 greater clarity will be achieved thereby and 2 cross fertilization will lead to more fruitful questions We thank P R Kumar and P P Varaiya for organizing the workshop and editing the proceedings We also take this opportunity to thank the National Science Foundation and the Army Research Office whose financial support made the workshop possible A vner Friedman Willard Miller Jr

Computational Fluid Dynamics and Reacting Gas Flows

Bjorn Engquist,Mitchell Luskin,Andrew Majda,2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTATIONAL FLUID DYNAMICS AND REACTING GAS FLOWS is in part the proceedings of a workshop which was an integral part of the 1986 87 IMA program on SCIENTIFIC COMPUTATION We are grateful to the Scientific Committee Bjorn Engquist Chairman Roland Glowinski Mitchell Luskin and Andrew Majda for planning and implementing an exciting and

stimulating year long program We especially thank the Workshop Organizers Bjorn Engquist Mitchell Luskin and Andrew Majda for organizing a workshop which brought together many of the leading researchers in the area of computational fluid dynamics George R Sell Hans Weinberger

PREFACE Computational fluid dynamics has always been of central importance in scientific computing It is also a field which clearly displays the essential theme of interaction between mathematics physics and computer science Therefore it was natural for the first workshop of the 1986 87 program on scientific computing at the Institute for Mathematics and Its Applications to concentrate on computational fluid dynamics In the workshop more traditional fields were mixed with fields of emerging importance such as reacting gas flows and non Newtonian flows The workshop was marked by a high level of interaction and discussion among researchers representing varied schools of thought and countries

Next Generation Environmental Models and Computational Methods George Delic, Mary Fanett Wheeler, 1997-01-01 Large scale changes are taking place in the way modelling is performed within the US EPA and a new generation of environmental models is currently under construction The US EPA is engaging in several modelling efforts in response to Congressional mandates such as the Clean Air Act and the Clean Water Act These mandates require the scientific modelling of the impact of pollutants on human health and the environment The complexity of scale in environmental models has increased by several orders of magnitude with a simultaneous demand for increased stability accuracy and efficiency in the computed model solution This book showcases numerical algorithms appropriate to the subject areas listed below and explores how new algorithmic methods would benefit the US EPA s environmental models and other environmental studies

Hamiltonian Dynamical Systems H.S. Dumas, K.R. Meyer, D.S. Schmidt, 2012-12-06 From its origins nearly two centuries ago Hamiltonian dynamics has grown to embrace the physics of nearly all systems that evolve without dissipation as well as a number of branches of mathematics some of which were literally created along the way This volume contains the proceedings of the International Conference on Hamiltonian Dynamical Systems its contents reflect the wide scope and increasing influence of Hamiltonian methods with contributions from a whole spectrum of researchers in mathematics and physics from more than half a dozen countries as well as several researchers in the history of science With the inclusion of several historical articles this volume is not only a slice of state of the art methodology in Hamiltonian dynamics but also a slice of the bigger picture in which that methodology is imbedded
