Physical Assessment of Patients Ruth Harris,2008-04-21

Assessment is arguably the most important stage of nursing. It forms the basis for any planned nursing intervention and a baseline against which subsequent events in the hospital stay can be compared. Assessment is an ongoing activity where the patient is continually reviewed and care reappraised to ensure that the patient's needs are being met. The main aim of this study is to evaluate the reliability and validity of the Byron Physical Assessment Framework (BPAF). The study involved scrutinising the BPAF to describe its purpose, conceptual basis and how it was developed. The BAF was then refined using extensive literature review and expert opinion to improve its comprehensiveness and clarity for its intended purpose. This monograph should be useful to all those attempting to construct and validate clinical assessment and measuring tools. Ruth Harris has the expertise necessary to do this in a sophisticated yet realistic way for practice colleagues. **Role**

This easy to use handbook is a useful resource for all health professionals engaged in processes of evaluation in a variety of contexts within the world of healthcare. Encouraging an evidence based approach to practice, it provides guidelines on how to design and evaluate an intervention, examples of good practice, reliable and easy to use measures, advice on how to work effectively. Designed to prompt self evaluation and group project evaluation, it illustrates how simple evaluation methods can help to break down the divisions between research and practice. It shows how more practitioners can apply such methods to improve the quality of care as well as the treatments and services which they offer their patients and clients. The examples drawn from clinical settings, community practice and work in the voluntary sector demonstrate the kind of evaluation that can be undertaken by a small scale team or a single practitioner with limited resources. The Evaluation Handbook will be a useful source of reference for those new to evaluation as well as more experienced managers and researchers. **Advanced**

Lighting Up Mimi Nichter, 2015-02-13 While the past 40 years have seen significant declines in adult smoking this is not the case among young adults who have the highest prevalence of smoking of all other age groups At a time when just about everyone knows that smoking is bad for you why do so many college students smoke Is it a short lived phase or do they continue throughout the college years And what happens after college when they enter the real world Drawing on interviews and focus groups with hundreds of young adults *Lighting Up* takes the reader into their everyday lives to explore social smoking Mimi Nichter argues that we must understand more about the meaning of social and low level smoking to youth the social contexts that cause them to take up or not take up the habit and the way that smoking plays a large role in students social lives Nichter examines how smoking facilitates social interaction helps young people express and explore their identity and serves as a means for communicating emotional states Most college students who smoked socially were confident that this was no big deal After all they were not really smokers and they would only be smoking for a short time But as graduation neared they expressed ambivalence or reluctance to quit As many grads today step into an uncertain future where the prospect of finding a good job in a timely manner is unlikely their 20s may be a time of great stress and instability For those who have come to depend on the comfort of cigarettes during college this array of life stressors may make cutting back or quitting more difficult despite one s intentions and understandings of the harms of tobacco And emerging products on the market like e cigarettes offer an opportunity to move from smoking to vaping *Lighting Up* considers how smoking fits into the lives of young adults and how uncertain times may lead to uncertain smoking trajectories that reach into adulthood
