Subcommittee on Research and Extension, 1957 **Exotic Plant Pests and North American Agriculture** Charles Wilson, 2012-12-02 **Exotic Plant Pests and North American Agriculture** examines the threat posed by exotic pests introduced to North American agriculture. It considers the impact of introduced pests on humans and it highlights the need for intensified research efforts and international cooperation to prevent further introductions. Organized into 17 chapters plus an epilogue, this volume begins with a historical overview of pest introductions including insects and mites and possible introductions in the future. It then discusses the impact of introduced weeds in North America, ecology and genetics of exotic species, how to detect and stop pest introductions and research on exotic insects, plant pathogens and weeds. The reader is also introduced to the use of exotic natural enemies for biological control of exotic pests, prediction of potential epidemics caused by exotic pests, insurance against exotic plant pathogens and international cooperation on controlling exotic pests. Scientists, plant pathologists, ecologists and those working in academics, government research laboratories and regulatory agencies will benefit from reading this book. *Natural Products in Plant Pest Management* N. K. Dubey, 2010-11-24 Overzealous and indiscriminate use of many synthetic pesticides during recent decades in the control of plant pests has resulted in a number of environmental and toxicological problems. Reducing the release of synthetic chemicals into the environment requires that alternative sources of chemicals are developed that can be used safely in the management of plant pests. Botanical antimicrobials derived from plants are currently recognised as biodegradable, systemic, eco friendly and non toxic to mammals and are thus considered safe. Their modes of action against pests are diverse. Natural compounds are well suited to organic food production in industrialised countries and can play greater roles in the protection of food crops in developing countries. Some plant based antimicrobials e.g. neem products, pyrethroids and essential oils are already used to manage pest

populations on a large scale Plant scientists and agriculturists now devote significant attention to discovery and further development and formulation of novel plant products with antimicrobial activity This book is the first to bring together relevant aspects of the basic and applied sciences of natural pesticides and discussed modern trends in the use of natural products in pest management *Young Americans, You Can Help Fight Plant Pests* United States.
