*Rationality in Science* R. Hilpinen, 2012-12-06 The present volume is a product of an international research program Foundations of Science and Ethics launched in 1976 by the Inter University Centre of Post Graduate Studies Dubrovnik Yugoslavia with the financial support of the Volkswagen Foundation According to the outline of the program formulated in 1976 by a committee consisting of Professors Dagfinn Føllesdal Rudolf Haller coordinator Lorenz Krüger Karel Lambert Keith Lehrer Kuno Lorenz Gunther Patzig Ivan Supek and Paul Weingartner its general purpose was to investigate the interplay of various internal and external factors in the development of science Generous financial support from the Volkswagen Foundation made it possible to plan four annual conferences the first of which was held in Dubrovnik on March 6-12 1978 This volume contains the majority of the papers presented in the first Dubrovnik conference the main theme of this conference was Rationality in Science and Ethics Some of the papers appear here in a thoroughly revised form Further results of the research program will be discussed in three other conferences to be held in Dubrovnik in 1979 1981 the papers presented in these conferences will be published separately Professor Rudolf Haller of the University of Graz assumed the burden of the practical planning and organization of the first conference as well as that of the other three conferences I wish to thank Professor Haller on behalf of all participants for carrying out this demanding and time consuming task

**Rationality in Science and Politics** G. Andersson, 2012-12-06 This remarkable collection of essays diverse but united by the theme of critical reasoning testifies to the attention and respect paid by the authors to the philosophical career of Gerard Radnitzky We too greet Professor Radnitzky for his decades of intellectual labor devoted to the establishment of rational analysis of human problems Not least of his concerns has been to understand what it is to be rational to disentangle the apparently rational and the genuine to separate dogma from justified belief to cherish imagination while seeking its test If Radnitzky has long been known for his careful elaboration of the spectrum of modern approaches to epistemology those who have gathered to celebrate his work in this volume will also be widely known for their own writings on this matter of critical methodology Their signposts or are they warning lights will be familiar to thoughtful philosophers and scientists and they appear as queries as we read these papers the rational heuristic and the irrational heuristic accepting the fallible differing societies but one rational cognitive practice accepting evidence which is placebogenic choosing among the incommensurables what remains of the logic of demarcation purpose in nature progress of science rationality in politics a humane reasonableness and a critical rationalism Gunnar Andersson sets the focus well for the reader We need not choose between dogmatism and relativism he argues And then he tells the political lesson we might avoid both anarchy and

despotism      *Between History and Method* S. Amsterdamski, 2013-06-29 In this book I have tried to develop further the ideas expressed in my previous work *Between Experience and Metaphysics* which was published in the same series in 1975. Several years have passed since the original Polish edition and then 1 the Italian translation of this book appeared. The fact that the principal ideas expressed in it have withstood as I see it the brunt of criticism has led me to remain basically with the original text. Two main changes have however been introduced. First I have added an Appendix containing the original version of a paper I presented at the Wissenschaftskolleg zu Berlin in June 1988 and a short postscript to that paper referring to comments made during two discussions at the Kolleg. Let me briefly explain the reason for this addition. In recent years the landscape for historical and philosophical interpretation of the evolution of scientific knowledge has altered. The strongest of the new contenders for epistemological recognition are social constructivists who analyze in detail how knowledge is produced within specific social settings including the instruments and procedures of particular laboratories and the economic and political realities of particular scientific communities. The local character of these studies raises the question of whether they can ever provide generalizable epistemological claims.

Progress and Rationality in Science G. Radnitzky, G. Andersson, Robert S. Cohen, Marx W. Wartofsky, 1978-11-30 This collection of essays has evolved through the cooperative efforts which began in the fall of 1974 of the participants in a workshop sponsored by the Fritz Thyssen Foundation. The idea of holding one or more small colloquia devoted to the topics of rational choice in science and scientific progress originated in a conversation in the summer of 1973 between one of the editors GR and the late Imre Lakatos. Unfortunately Lakatos himself was never able to see this project through but his thought provoking methodology of scientific research programmes was ably expounded and defended by his successors. Indeed this volume continues and deepens the debate inaugurated in *Criticism and the Growth of Knowledge* edited by Imre Lakatos and Alan Musgrave a book which grew out of a conference held in 1965. That debate has continued during the years that have passed since that conference. The group of discussions about the place of rationality in science which have been held between those who emphasize the history of science with Feyerabend and Kuhn as the most prominent exponents and the critical rationalists Popper and his followers with Imre Lakatos defending a middle ground these discussions were seen by almost all commentators as the most important event in the philosophy of science in the last decade. This problem area constituted the central theme of our Thyssen workshop. The workshop operated in the following manner.

**Rationality and Science** Roger Trigg, 1993 Can science hope to provide a Theory of Everything a final explanation of the nature of the Universe. Is science our sole source of knowledge. These questions are being increasingly asked and yet at the same time many distrust science and have become disillusioned with its effects on our world. Can science and scientific practice be justified. What are the rational foundations of science. Many contemporary philosophers are bewitched by the idea that there must be some neutral ground or a God's eye view to which we can appeal when we wish to justify a whole conceptual scheme. The impossibility of finding one drives many to relativism.

How far can reason and the idea of reality be upheld in the face of this criticism In this important new book Professor Trigg faces these issues squarely and examines how far it is possible to give reasons for trusting science In defending a realist outlook Trigg aims to show that even physical science must be given metaphysical foundations In so doing he explains and evaluates the views of Rorty Wittgenstein Quine Putnam and Hawking amongst others The limits of science and rationality are explored and the power of human reason is in the end upheld The Justification of Science and the Rationality of Religious Belief

Michael C. Banner,1990 In this critical examination of recent accounts of the nature of science and of its justification given by Kuhn Popper Lakatos Laudan and Newton Smith Banner contends that models of scientific rationality which are used in criticism of religious beliefs are in fact often inadequate as accounts of the nature of science He argues that a realist philosophy of science both reflects the character of science and scientific justifications and suggests that religious belief could be given a justification of the same sort *The Problem of Rationality in Science and Its Philosophy* J.

Misieki,1994-12-31 **Rationality in Science, Religion, and Everyday Life** Mikael Stenmark,2016-09-15 Mikael Stenmark examines four models of rationality and argues for a discussion of rationality that takes into account the function and aim of such human practices as science and religion **Scientific Realism and the Rationality of Science** Howard

Sankey,2016-04-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind independent world which we inhabit This book articulates and defends that position In presenting a clear formulation and addressing the major arguments for scientific realism Sankey appeals to philosophers beyond the community of typically Anglo American analytic philosophers of science to appreciate and understand the doctrine The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature *Rationality in Science and Politics* G Andersson,1985-03-31

**The Myth of the Framework** Karl Popper,2014-04-23 In a career spanning sixty years Sir Karl Popper has made some of the most important contributions to the twentieth century discussion of science and rationality The Myth of the Framework is a new collection of some of Popper s most important material on this subject Sir Karl discusses such issues as the aims of science the role that it plays in our civilization the moral responsibility of the scientist the structure of history and the perennial choice between reason and revolution In doing so he attacks intellectual fashions like positivism that exaggerate what science and rationality have done as well as intellectual fashions like relativism that denigrate what science and rationality can do Scientific knowledge according to Popper is one of the most rational and creative of human achievements but it is also inherently fallible and subject to revision In place of intellectual fashions Popper offers his own critical rationalism a view that he regards both as a theory of knowlege and as an attitude towards human life human morals and democracy Published in cooperation with the Central European University **The Problem of Rationality in Science and its Philosophy** J. Misiek,2012-12-06 Rationality of science was the topic of two conferences

held in 1988 and 1989 organized by the Department of Philosophy of Science Institute of Philosophy Jagiellonian University Both conferences included a small group of invited speakers This book contains a selection of papers presented there It is intended mainly for specialists in the philosophy of science and scientists interested in philosophy Students and especially postgraduate students would also benefit from reading it The first conference Popper Polanyi and the Notion of Rationality was held from 1 to 5 October 1988 in Janowice The second conference The Aim and Rationality of Science was held in Cracow at the Jagiellonian University from 4 to 10 June 1989 The topics of both conferences were inspired by our late friend Dr Tomasz Kocowski who many years earlier invited me and my colleagues from the Department to participate in research concerning the problem of creativity and serve him and other psychologists as methodological advisors Personal contacts with this intelligent and inquisitive man helped us to realize that we could not fulfill our task while adhering to the received view in the philosophy of science This experience helped us to see science not only as scientific knowledge but also as a process of research We then turned our attention to Michael Polanyi who seemed to provide the philosophy we were looking for

**Using Knowledge** Ingemar Nordin, 2017-07-31 In *Using Knowledge On the Rationality of Science Technology and Medicine* Ingemar Nordin analyses the philosophical problems and nature of science technology and medicine The main focus of the book is on the structure and dynamics of technological change What implications do the goals of technology have for its rationality How can the pragmatic problem of induction be solved within a fallibilistic and skeptical context Nordin shows that the social context is of vital importance for the goal of technology usefulness and its rational development with important consequences for how to design a technology policy in society A rational technological development needs technological pluralism since knowledge of what is useful is scattered among millions of users

**Scientific Explanation and Understanding** Nicholas Rescher, 1983

**Rational Changes in Science** Joseph C. Pitt, Marcello Pera, 2012-12-06

THE PROBLEMS OF SCIENTIFIC RATIONALITY Fashion is a fickle mistress Only yesterday scientific rationality enjoyed considerable attention consideration and even reverence among philosophers but today's fashion leads us to despise it and the matron rejected and abandoned as Hecuba complains *modo maxima rerum tot generis natisque potens nunc trahor exuiniops* to cite Kant for our purpose who cited Ovid for his Like every fashion ours also has its paradoxical aspects as John Watkins correctly reminds in an essay in this volume Enthusiasm for science was high among philosophers when significant scientific results were mostly a promise it declined when that promise became an undeniable reality Nevertheless as with the decline of any fashion even the revolt against scientific rationality has some reasonable grounds If the taste of the philosophical community has changed so much it is not due to an incident or a whim This volume is not about the history of and reasons for this change Instead it provides a view of the new emerging image of scientific rationality in both its philosophical and historical aspects In particular the aim of the contributions gathered here is to focus on the concept around which the discussions about rationality have mostly taken place scientific change

*Scientific Discovery, Logic, and*

*Rationality* Thomas Nickles, 2012-12-06 It is fast becoming a cliché that scientific discovery is being rediscovered. For two philosophical generations, that of the Founders and that of the Followers of the logical positivist and logical empiricist movements, discovery had been consigned to the domain of the intractable, the ineffable, the inscrutable. The philosophy of science was focused on the so-called context of justification as its proper domain. More recently, as the exclusivity of the logical reconstruction program in philosophy of science came under question and as the critique of justification developed within the framework of logical and epistemological analysis, the old question of scientific discovery, which had been put on the back burner, began to emerge once again. Emphasis on the relation of the history of science to the philosophy of science and attention to the question of theory change and theory replacement also served to legitimate a new concern with the origins of scientific change to be found within discovery and invention. How welcome then to see what a wide range of issues and what a broad representation of philosophers and historians of science have been brought together in the present two volumes of the Boston Studies in the Philosophy of Science. For what these volumes achieve in effect is the continuation of a tradition which had once been strong in the philosophy of science, namely that tradition which addressed the question of scientific discovery as a central question in the understanding of science. Karl Popper's Philosophy of Science Stefano Gattei, 2008-10-16 Rectifying misrepresentations of Popperian thought with a historical approach to Popper's philosophy, Gattei reconstructs the logic of Popper's development to show how one problem and its tentative solution led to a new problem.
