Reactive Extrusion Principles And Practice:

Reactive Extrusion Marino Xanthos,1992 This is the first published book that combines the applied and fundamental aspects of reactive extrusion a technology that has seen a tremendous growth in the past few years It is based on a highly successful advanced technical course given by the authors at the Stevens Institute of Technology Polymer Processing Institute The use of an extruder as a continuous reactor for processes such as polymerization polymer modification and blend compatibilization is gaining increasing popularity and competes with diluent free operations with respect to efficiency and economics The first part of the book emphasizes the technological aspects of reactive extrusion It includes case histories of industrial applications an analysis of existing continuous processes from reaction fundamentals and an extensive review of polymer modification reactions involving acid and anhydride functionalities and their applications The second part of the monograph contains an exhaustive survey of virtually all chemical reactions that have been conducted in extruders the important characteristics of over 600 processes listed in recent technical and patent literature are summarized The engineering fundamentals of reactive extrusion are included in the third part of the book which features a full description and comparison of available extrusion equipment heat transfer considerations and the application of polymerization engineering principles to extruder reactions The book is intended for engineers and technologists involved in this industrially important sector of polymer processing Reactive Extrusion Marino Xanthos,1992-01-01 **Reactive Extrusion** Marino Xanthos,1992-01-01 Based on a highly successful PPI advanced technical course given by the author this book combines the applied and fundamental aspects of reactive extrusion **Reactive Extrusion** Günter Beyer,Christian Hopmann,2017-09-28 This first comprehensive overview of reactive extrusion technology for over a decade combines the views of contributors from both academia and industry who share their experiences and highlight possible applications and markets They also provide updated information on the underlying chemical and physical concepts summarizing recent developments in terms of the material and machinery used As a result readers will find here a compilation of potential applications for reactive extrusion to access new and cost effective polymeric materials while using existing compounding machines *Reactive Extrusion* Günter Beyer,Christian Hopmann,2018-01-03 This first comprehensive overview of reactive extrusion technology for over a decade combines the views of contributors from both academia and industry who share their experiences and highlight possible applications and markets They also provide updated information on the underlying chemical and physical concepts summarizing recent developments in terms of the material and machinery used As a result readers will find here a compilation of potential applications for reactive extrusion to access new and cost effective polymeric materials while using existing compounding machines **Reactive Extrusion Systems** Leon P.B.M. Campanella, 2014-03-31 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die It is applied and used in many batch and continuous processes However extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components melting of polymers mixing of viscous media heat processing of polymeric and biopolymeric materials product texturization and shaping defibering and chemical impregnation of fibrous materials reactive extrusion and fractionation of solid liquid systems Extrusion processing technology is highly complex and in depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area this book aims to provide readers with these analyses and discussions Extrusion Processing Technology Food and Non Food Biomaterials provides an overview of extrusion processing technology and its established and emerging industrial applications Potency of process intensification and sustainable processing is also discussed and illustrated The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians The authors bring their research and industrial experience in extrusion processing technology to provide a

comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels It will also be of interest to students of food science food engineering and chemical engineering Also available Formulation Engineering of Foods Edited by J E Norton P J Fryer and I T Norton ISBN 978 0 470 67290 7 Food and Industrial Bioproducts and Bioprocessing Edited by N T Dunford ISBN 978 0 8138 2105 4 Handbook of Food Process Design Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3 Reactive Modifiers for Polymers S. Al-Malaika,2012-12-06 Chemical modification of polymers by reactive modifiers is no longer an academic curiosity but a commercial reality that has delivered a diverse range of speciality materials for niche markets reactively grafted styrenic alloys maleated polyolefins super tough nylons silane modified and moisture cured polyolefins and thermoplastic elastomers are but few examples of commercial successes Although the approach of reactive modification of polymers has been largely achieved either in solution or in the solid state through in situ reactions in polymer melts it is the latter route that has attracted most attention in the last two decades owing to its flexibility and cost effectiveness This route referred to as reactive processing focuses on the use of suitable reactive modifiers and the adoption of conventional polymer processing machinery an extruder or a mixer as a chemical reactor to perform in situ targeted reactions for chemical modification of preformed polymers This relatively simple though scientifically highly challenging approach to reactive modification offers unique opportunities in exploiting various reactive modifiers for the purpose of altering and transforming in a controlled manner the properties of preformed commercial polymers into new speciality materials with tailor made properties and custom designed performance for target applications Such an economically attractive route constitutes a radical diversion away from the traditional practices of manufacturing new polymers from monomers which involves massive investments in sophisticated technologies and chemical plants
