Speaking, Reading, and Writing in Children With Language Learning Disabilities Katharine G. Butler,Elaine R. Reading Development in Chinese Children Catherine McBride-Chang,Hsuan-Chih Chen,2003-12-30 This text reviews both similarities and unique cultural linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions Chinese reading acquisition relies upon children s strongly developing analytic skills as highlighted here These 16 chapters present state of the art research on diverse aspects of Chinese children s reading development This edited volume presents research on Chinese children s reading development across Chinese societies Authors from China Hong Kong Singapore and Taiwan among others present the latest findings on how Chinese children learn to read Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English For example Chinese readers in different regions might speak different mutually unintelligible languages be taught to read with or without the aid of a phonetic coding system and learn different scripts This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors

involved in Chinese literacy acquisition One of the clearest themes to emerge from this volume is that across regions Chinese children despite lack of explicit teaching of phonetic or semantic character components learn to read largely by integrating visible print sound and print meaning connections Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed these children are analytic learners Chapters in this book also cover such topics as Chinese children s reading comprehension cognitive characteristics of good and poor readers and reading strategies of bilingual and biscriptal readers This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures *Beginning Reading* Yola Center,2020-07-31 Most children learn to read irrespective of the method of instruction Yet up to a fifth of children struggle with reading in their first few years at school Unfortunately those who struggle in the early years will continue to struggle throughout their school career Yola Center offers a systematic research based guide to teaching reading in the first three years of school Her aim is to ensure that teachers can work with at risk or reluctant readers in the regular classroom as effectively as with children for whom reading seems to come naturally Taking an analytic approach to reading *Beginning Reading* shows how children can be moved through the key stages of early reading acquisition Each chapter includes an overview of relevant research practical classroom strategies and guidelines for lesson planning Center adopts a balanced view of reading instruction stressing the importance of phonological processes at the beginning of literacy instruction as well as semantic and syntactic ones This supports at risk children in regular classrooms who are provided with the maximum opportunity to develop the accurate and fluent word recognition skills that are needed in order to extract meaning from print At last A book that combines an overview of recent research findings and their implications for the teaching of reading with sensible and practical suggestions for classroom teachers Morag Stuart Professor in the Psychology of Reading University of London This is an excellent book It comprehensively reviews the research literature and shows how to apply it to the nuts and bolts of teaching reading in the first few years of school It is a must read for teachers Professor Tom Nicholson University of Auckland New Zealand This is the book that we have all been waiting for It is the only book that I have seen that focuses on a theoretically sound approach to the teaching of reading with a focus on children who experience difficulties in the regular classroom Ruth Fielding Barnsley Queensland University of Technology It is indeed rare when a reading scientist can explain the intricacies of reading development reading difficulties and reading instruction with such clarity and comprehensiveness Most importantly Dr Center provides a masterful synthesis of the most current converging scientific evidence available that defines what research based reading instruction is all about G Reid Lyon PhD National Institutes of Health USA

Perspectives on the Classification of Specific Developmental Disorders is an up-to-date review of the controversy surrounding the classification of such disparate disorders as reading, spelling, writing and language disorders. Severe and specific impairments in these functions do exist and appear to follow a developmental course. How to identify children presenting with such problems and how to operationalize the disorders has long challenged professionals. This text grew from an international symposium held in the Netherlands, but all chapters have been specially prepared for the publication. Described in the foreword by Sir Michael Rutter, FRS, as thoughtful and well-informed discussions that may serve as a basis for a problem-solving set of both research strategies and practical steps that will ensure real resolutions of the dilemmas outlined here, the text should serve as a stimulating source for debate of the many issues involved. Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads. The new edition addresses their concerns. Norms for speech development are given, differentiating between the emergence of the ability to produce speech sounds, articulation and typical developmental error patterns, phonology. The incidence of speech disorders is described for one UK service, providing crucial information for service management. The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with disordered speech. Exploration of that data provides implications for prioritising case loads. The relationship between speech and language disorders is examined in the context of clinical decisions about what to target in therapy. New chapters provide detailed intervention programmes for subgroups of speech disorder: delayed development, use of atypical error patterns, inconsistent errors and development verbal dyspraxia. The final section of the book deals with special populations: children with cognitive impairment, hearing and auditory processing.
