Grades 6-8 *Designing Everyday Assessment in the Science Classroom*, 2005 This book describes how middle school science teachers in collaboration with a team of researchers tried to improve their everyday assessment practices to enhance student learning It discusses the challenges they faced the differences among the teachers and the personal nature of deep educational change A product of CAPITAL Classroom Assessment Project to Improve Teaching and Learning a research effort supported by the National Science Foundation this book Uses classroom stories to show how teachers can use a variety of formative assessment techniques to answer questions they have about their teaching Provides real life examples of teachers grappling with new practices at a personal level in their own settings and in light of their own values and beliefs Offers suggestions for designing professional development efforts that recognize the significant variation among teachers in how they go about changing their assessment practices Outlines principles and practices that must accompany change in the classroom if it is to be more than superficial

Teaching Mathematics in Grades 6 - 12 Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6-12 explores how research in mathematics education can inform teaching practice in grades 6-12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6-12 classrooms and how students thinking may develop in response to different teaching strategies

Improving Instruction in Rational Numbers and Proportionality Margaret Schwan Smith,Edward

A. Silver,Mary Kay Stein,2005-01-01 Helping students develop an understanding of important mathematical ideas is a persistent challenge for teachers In this book one of a three volume set well known mathematics educators Margaret Smith Edward A Silver and Mary Kay Stein provide teachers of mathematics the support they need to improve their instruction They focus on ways to engage upper elementary middle school and high school students in thinking reasoning and problem solving to build their mathematics understanding and proficiency The content focus of Volume One is rational numbers and

proportionality Using materials that were developed under the NSF funded COMET Cases of Mathematics to Enhance Teaching program each volume in the set features cases from urban middle school classrooms with ethnically racially and linguistically diverse student populations Each case illustrates an instructional episode in the classroom of a teacher who is implementing standards based instruction the teachers perspective including their thoughts and actions as they interact with students and with key aspects of mathematical content cognitively challenging mathematics activities that are built around samples of authentic classroom practice and facilitation chapters to help professional developers teach the cases including specific guidelines for facilitating discussions and suggestions for connecting the ideas presented in the cases to a teacher s own practice As a complete set this resource provides a basis on which to build a comprehensive professional development program to improve mathematics instruction and student learning

Improving Instruction in Geometry and Measurement Margaret Schwan Smith,Edward A. Standards-based Mathematics Assessment in Middle School Thomas A. Romberg,2004 This volume takes an in depth look at the problems and practices involved in conducting formative assessments in middle school mathematics classrooms In these chapters researchers and teachers identify the challenges teachers faced as they attempted to implement new assessment procedures moving from more traditional methods to an emphasis in the quality of student work This authoritative book Documents the shift from traditional ways of judging student performance tests to measure what students know to reform notions of mathematical literacy documenting students growth in understanding specific content domains Discusses four key steps in the change process that helped teachers to accomplish the necessary shift in assessment

practices Includes two chapters written by teachers that describe their personal experiences with implementing these new practices in the classroom and outlines a professional development program that evolved as a consequence of the work done by the teachers and students discussed in this book

How Students (mis-) Understand Science and Mathematics

Ruth Stavy,Dina Tirosh,2000-01-01 In this long awaited book Timothy J Lensmire examines the problems and promise of progressive literacy education He does this by developing a series of striking metaphors in which for example he imagines the writing workshop as a carnival or popular festival and the teacher as a novelist who writes her student characters into more and less desirable classroom stories Grounded in Lensmire s own and others work in schools Powerful Writing Responsible Teaching makes powerful use of Bakhtin s theories of language and writing and Dewey s vision of schooling and democracy Lensmire s book is at once a defense a criticism and a reconstruction of progressive and critical literacy approaches

Science Teaching/science Learning

Elnora S. Harcombe,2001-01-01 Science Teaching Science Learning based on a model professional development program gives powerful proof that urban teachers can ignite curiosity and promote deep understanding in children when provided with the necessary intellectual infrastructure including a complex balance of increased science knowledge a safe environment for professional experimentation and a long term interaction with colleagues The ensuing invigoration and renewed dedication of program participants belies the inevitability of the projected national science teacher shortage Harcombe breaks new ground demonstrating that when professional teacher development is based on constructivist learning theory and framed in the knowledge domain of the sciences it empowers teachers to dramatically change what they know how they teach and what their students learn

Literacy and Learning in the Content Areas

Sharon Kane,2017-07-05 The 3rd Edition of Literacy Learning in the Content Areas helps readers build the knowledge motivation tools and confidence they need as they integrate literacy into their middle and high school content area classrooms Its unique approach to teaching content area literacy actively engages preservice and practicing teachers in reading and writing and the very activities that they will use to teach literacy to their own students in middle and high school classrooms Rather than passively learning about strategies for incorporating content area literacy activities readers get hands on experience in such techniques as mapping webbing anticipation guides booktalks class websites and journal writing and reflection Readers also learn how to integrate children s and young adult literature primary sources biographies essays poetry and online content communities and websites into their classrooms Each chapter offers concrete teaching examples and practical suggestions to help make literacy relevant to students content area learning Author Sharon Kane demonstrates how relevant reading writing speaking listening and visual learning activities can improve learning in content area subjects and at the same time help readers meet national content knowledge standards and benchmarks

Learning to Read the Numbers David J. Whitin, Phyllis E. Whitin, 2010-09-13 Being a critical reader of numerical

information is an integral part of being literate in today's data-drenched world. Uniquely addressing both mathematics and language issues, this text shows how critical readers dig beneath the surface of data to better evaluate their usefulness and to understand how numbers are constructed by authors to portray a certain version of reality. Engaging, concise, and rich with examples and clear connections to classroom practice, it provides a framework of critical questions that children and teachers can pose to crack open authors' intentions, expose their decisions, and make clear who are the winners and losers. Questions that are essential for building democratic classrooms. Explaining and illustrating how K-8 teachers can engage students in developing the ability to be both critical composers and critical readers of texts. *Learning to Read the Numbers* is designed for teacher education courses across the areas of language arts, mathematics, and curriculum studies, and for elementary teachers, administrators, and literacy and mathematics coaches. *Learning to Read the Numbers* is a co-publication of The National Council of Teachers of English (www.ncte.org) and Routledge. **Resources in Education**, 2001-10
