Ferrate,E. A. Puente,2014-05-16 Software for Computer Control 1982 covers the proceedings of the Third IFAC IFIP Symposium The book discusses the state of software development for digital computer applications for science and control With a total of 73 papers the book covers topics such as real time language and operating systems man machine communication software software for robots software for distributed control systems C A D of digital computer controls systems algorithms for digital computer control control software engineering and management and industrial applications Computer scientists engineers and I T professionals will find this book interesting since it provides discussions on the various applications of computer programs Distributed Computer Control Systems 1988 Th. d'Epinay Lalive,M.G. Rodd,2014-06-28 Continuing the forward thinking of previously held distributed computer control systems meetings this volume discusses both the positive and negative views on trends in OSI based communications the development of the fieldbus the importance of the incorporation into basic real time operating systems to be used for distributed systems of concepts such as time stamping and access to global time bases and the influence of artificial intelligence based technologies on the distributed computer control world **Intelligent Control**

Nazmul Siddique,2013-11-29 Intelligent Control considers non traditional modelling and control approaches to nonlinear systems Fuzzy logic neural networks and evolutionary computing techniques are the main tools used The book presents a modular switching fuzzy logic controller where a PD type fuzzy controller is executed first followed by a PI type fuzzy controller thus improving the performance of the controller compared with a PID type fuzzy controller The advantage of the switching type fuzzy controller is that it uses one rule base thus minimises the rule base during execution A single rule base is developed by merging the membership functions for change of error of the PD type controller and sum of error of the PI type controller Membership functions are then optimized using evolutionary algorithms Since the two fuzzy controllers were executed in series necessary further tuning of the differential and integral scaling factors of the controller is then performed Neural network based tuning for the scaling parameters of the fuzzy controller is then described and finally an evolutionary algorithm is applied to the neurally tuned fuzzy controller in which the sigmoidal function shape of the neural network is determined The important issue of stability is addressed and the text demonstrates empirically that the developed controller was stable within the operating range The text concludes with ideas for future research to show the reader the potential for further study in this area Intelligent Control will be of interest to researchers from engineering and computer science backgrounds working in the intelligent and adaptive control

Distributed Computer Control Systems 1989 L. Motus,S. Narita,2014-07-04 The focus of the workshop was on recent advances in the theory applications and techniques for distributed computer control systems Topics included tools and methods for inner layers of DCCS application papers presenting operational DCCS the infiltration of true real time or time critical concepts and the emergence of artificial intelligence methods in DCCS applications leading to novel computer architectures being integrated in computer networks The book will be of interest not only to those involved in DCCS but also software engineers and distributed computing scientists

Microprocessor-Based Control Systems N.K. Sinha,1986-06-30 Recent advances in LSI technology and the consequent availability of inexpensive but powerful microprocessors have already affected the process control industry in a significant manner Microprocessors are being increasingly utilized for improving the performance of control systems and making them more sophisticated as well as reliable Many concepts of adaptive and learning control theory which were considered impractical only 20 years ago are now being implemented With these developments there has been a steady growth in hardware and software tools to support the microprocessor in its complex tasks With the current trend of using several microprocessors for performing the complex tasks in a modern control system a great deal of emphasis is being given to the topic of the transfer and sharing of information between them Thus the subject of local area networking in the industrial environment has become assumed great importance The object of this book is to present both hardware and software concepts that are important in the development of microprocessor based control systems An attempt has been made to obtain a balance between theory and practice with emphasis on practical applications It should be useful for both practicing engineers and students who are interested in learning the practical details of the implementation of microprocessor based

control systems As some of the related material has been published in the earlier volumes of this series duplication has been avoided as far as possible Trends in Control and Measurement Education D.P. Atherton,D.A. Linkens,2014-06-28 This volume is the published Proceedings of selected papers from the IFAC Symposium Swansea 11 13 July 1988 where a forum was provided for discussion of the latest advances and techniques in the education of control and instrument engineers Seven major topics were covered to aid lecturers in understanding developing and presenting systems engineering control and measurement as a subject to undergraduate and postgraduate students The teaching of real time computer control as a topic and laboratory experiments for both continuous and discrete systems were discussed as was process control with the emphasis on providing the student with engineering experience by using scaled down equipment which would teach practical skills Included in the Proceedings are papers on measurement and instrumentation an area felt to be neglected within academic instruction The development of software tools for systems design within systems engineering was included as was the exchange of teaching packages and methods between academics and the education curriculum of systems engineering within developing countries These Proceedings will prove to be a useful up to date guide and reference source for all lecturers and professors involved in curriculum development and the teaching of control and measurement in systems engineering
