Real People Working In Science:

Thinking Practices in Mathematics and Science Learning James G. Greeno, Shelley V. Goldman, 2013-04-03 The term used in the title of this volume thinking practices evokes questions that the authors of the chapters within it begin to answer What are thinking practices What would schools and other learning settings look like if they were organized for the learning of thinking practices Are thinking practices general or do they differ by disciplines If there are differences what implications do those differences have for how we organize teaching and learning How do perspectives on learning cognition and culture affect the kinds of learning experiences children and adults have This volume describes advances that have been made toward answering these questions These advances involve several agendas including increasing interdisciplinary communication and collaboration reconciling research on cognition with research on teaching learning and school culture and strengthening the connections between research and school practice The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors understanding of how people learn how they organize their thinking inside and across disciplines and how school learning might be better organized By touring through some of the perspectives on thinking and learning that have evolved into school learning designs Greeno and Goldman begin to establish a frame for what they are calling thinking practices This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice

Adult Education Teachers Rebecca Rogers, Mary Ann Kramer, 2020-08-11 This book examines the literacy practices of exemplary adult education teachers working within critical literacy frameworks It provides an in depth look at the complexity of adult literacy education through the lenses of these teachers An understanding of this complexity helps teachers design literacy practices in classrooms on a daily basis This is an important book for there is considerable pedagogical and political attention focused on adult literacy education at this time As the field of adult education continues to grapple with issues of teacher professionalization certification it adds a much needed teacher perspective Appropriate as a text for adult education courses this volume will also appeal to researchers teacher educators practitioners and graduate students across the field of literacy education

Drive and Curiosity Istvan Hargittai, 2010-04-13 What motivates those few scientists who rise above their peers to achieve breakthrough discoveries This book examines the careers of fifteen eminent scientists who achieved some of the most notable discoveries of the past century providing an insider s perspective on the history of twentieth century science based on these engaging personality profiles They include Dan Shechtman the 2011 Nobel laureate and discoverer of quasicrystals James D Watson the Nobel laureate and codiscoverer of the double helix structure of DNA Linus Pauling the Nobel laureate remembered most for his work on the structure of proteins Edward Teller a giant of the 20th century who accomplished breakthroughs in understanding of nuclear fusion George Gamow a pioneering scientist who devised the initially ridiculed and now accepted Big Bang In each case the author has uncovered a singular personality

characteristic motivational factor or circumstance that in addition to their extraordinary drive and curiosity led these scientists to make outstanding contributions For example Gertrude B Elion who discovered drugs that saved millions of lives was motivated to find new medications after the deaths of her grandfather and later her fianc F Sherwood Rowland who stumbled upon the environmental harm caused by chlorofluorocarbons eventually felt a moral imperative to become an environmental activist Rosalyn Yalow the codiscoverer of the radioimmunoassay always felt she had to prove herself in the face of prejudice against her as a woman These and many more fascinating revelations make this a must read for everyone who wants to know what traits and circumstances contribute to a person s becoming the scientist who makes the big breakthrough

Wolff-Michael Roth,2009-06-10 Contributing to the social justice agenda of redefining what science is and what it means in the everyday lives of people this book introduces science educators to various dimensions of viewing science and scientific literacy from the standpoint of the learner engaged with real everyday concerns within or outside school develops a new form of scholarship based on the dialogic nature of science as process and product and achieves these two objectives in a readable but scholarly way Opposing the tendency to teach and do research as if science science education and scientific literacy could be imposed from the outside the authors want science education to be for people rather than strictly about how knowledge gets into their heads Taking up the challenges of this orientation science educators can begin to make inroads into the currently widespread irrelevance of science in the everyday lives of people Utmost attention has been given to making this book readable by the people from whose lives the topics of the chapters emerge all the while retaining academic integrity and high level scholarship Wolff Michael Roth has been awarded the Distinguished Contributions Award by The National Association for Research in Science Teaching for his contributions to research in this field He has also been elected to be the Fellow of the American Association for Advancement of Science AAAS and Fellow of the American Educational Research Association *International Encyclopedia of Human Geography* ,2019-11-29 International Encyclopedia of Human

The Scientific Attitude Lee McIntyre, 2020-04-07 This intelligent treatise articulates why the pursuit of scientific truths even if inevitably flawed matters in our post truth world Publishers Weekly What separates science from other disciplines An attitude that respects evidence and is willing to evolve as new evidence arises Attacks on science have become commonplace Claims that climate change isn't settled science that evolution is only a theory and that scientists are conspiring to keep the truth about vaccines from the public are staples of some politicians rhetorical repertoire Defenders of science often point to its discoveries penicillin relativity without explaining exactly why scientific claims are superior In this book Lee McIntyre argues that what distinguishes science from its rivals is what he calls the scientific attitude caring about evidence and being willing to change theories on the basis of new evidence The history of science is littered with theories that were scientific but turned out to be wrong the scientific attitude reveals why even a failed theory can help us to understand what is special about science In this book McIntyre explores Historical cases that illustrate both scientific success and failure The transformation of medicine from a practice based on hunches to a science based on evidence Scientific fraud and ideology driven denialists pseudoscientists and skeptics How social science should embrace the scientific attitude Ultimately McIntyre says the grounding of science in evidence offers a uniquely powerful tool in the defense of science itself
