Network Management and Control A. Kershenbaum,Manu Malek,M. Wall,2013-11-11 Like the 120 volt standard for electricity the appearance of standards in network management heralds new opportunities for creativity and achievement As one example within the framework of these evolving standards consider a system of local area networks connecting computing equipment from different vendors A bridge 1qc k 8 up because of a transient caused by a repeater failure The result is a massive disconnection of virtual circuits What is the role of the manager and the network management system in solving the problem How does the vendor implement the solution How does the user use it What measurements should be made How should they be displayed How much of the diagnosis and correction should be automated How does the solution change with different hardware and software In the IEEE Communications Magazine I recently reported a timely illustration in the area of problems in fault management At the workshop hotel I was waiting for a room assignment at the reception desk when my attendant left the counter for a moment Upon returning he took one look at his screen and whined an accusatory question at everyone in sight Who logged out my terminal Who indeed It wasn't any of us It was the system

Quality of Service in Wireless Networks Over Unlicensed Spectrum Klara Nahrstedt,2012 This Synthesis Lecture presents a discussion of Quality of Service QoS in wireless networks over unlicensed spectrum The topic is presented from the point of view of protocols for wireless networks e g 802 11 rather than the physical layer point of view usually discussed for cellular networks in the licensed wireless spectrum A large number of mobile multimedia wireless applications are being deployed over WiFi IEEE 802 11 and Bluetooth wireless networks and the number will increase in the future as more phones tablets and laptops are equipped with these unlicensed spectrum wireless interfaces Achieving QoS objectives in wireless networks is challenging due to limited wireless resources wireless nodes interference wireless shared media node mobility and diverse topologies The author presents the QoS problem as 1 an optimization problem with different constraints coming from the interference mobility and wireless resource constraints and 2 an algorithmic problem with fundamental algorithmic functions within wireless resource management and protocols Table of Contents Preface Basics of Quality of Service in Wireless Networks QoS Aware Resource Allocation Bandwidth Management Delay Management Routing Acknowledgment References Author Biography

The Practical Real-Time Enterprise Bernd Kuglin,2005-02-21 The basic idea of the real time enterprise is to become quicker A business which wants to become a real time enterprise has to acquire three main abilities Internal and external data is integrated quickly and in real time in a well organized company data pool Analyses of information in the company data pool can be obtained in real time across function boundaries and at the touch of a button The number of working steps performed in batch mode is shifting dramatically in favor of immediate completion in real time The issue of communications or real time communications plays a special role here Studies have shown that processing times sometimes double when necessary communication events are handled in batch mode in the business process and not in real time In other words when an activity cannot be completed and lies around for days because an urgently needed partner cannot be contacted The necessity of acquiring these three abilities has implications for the process related technical and organizational aspects of a business that are dealt with in detail in this book
