C. Jain, 2008-06-16 Computational Intelligence A Compendium presents a well structured overview about this rapidly growing field with contributions of leading experts in Computational Intelligence The main focus of the compendium is on applied methods tried and proven effective to realworld problems which is especially useful for practitioners researchers students and also newcomers to the field The 25 chapters are grouped into the following themes I Overview and Background II Data Preprocessing and Systems Integration III Artificial Intelligence IV Logic and Reasoning V Ontology VI Agents VII Fuzzy Systems VIII Artificial Neural Networks IX Evolutionary Approaches X DNA and Immune based Computing **AI 2004: Advances in Artificial Intelligence** Geoffrey Webb, Xinghuo Yu, 2004-11-24 This book constitutes the refereed proceedings of the 17th Australian Conference on Artificial Intelligence AI 2004 held in Cairns Australia in December 2004 The 78 revised full papers and 62 revised short papers presented were carefully reviewed and selected from 340 submissions The papers are organized in topical sections on agents biomedical applications computer vision image processing and pattern recognition ontologies knowledge discovery and data mining natural language and speech processing problem solving and reasoning robotics and soft computing **Conceptual Structures for Knowledge Creation and Communication** Aldo de Moor, Wilfried Lex, Bernhard Ganter, 2003-09-09 This volume contains the proceedings of ICCS 2003 the 11th International Conference on Conceptual Structures This conference series continues to be the main forum for the presentation and discussion of state of the art research on conceptual structures The theories methodologies and techniques presented here have grown considerably in scope in recent years On the other hand solid bridges spanning the boundaries between such diverse fields as Conceptual Graphs Formal Concept Analysis and others are increasingly being built in our community The theme of this year's conference was Conceptual Structures for Knowledge Creation and Communication In our increasingly Inter networked world the potential support of information technology for the creation and communication of quality knowledge is almost boundless However in reality many conceptual barriers prevent the use of this potential The

main problem is no longer in the technological infrastructure but in how to navigate use and manage the wealth of available data resources Thus the question is how to create and communicate from data the information and ultimately the knowledge required by an ever more complex and dynamic society Conceptual structures research focuses on what is behind and between the data glut and the information overload that need to be overcome in answering this question In this way our editor contributes important ideas on how to actually realize some of the many still ambitious visions All regular papers were reviewed in a thorough and open process by at least two reviewers and one editor

Conceptual Graphs and Fuzzy Logic Tru Hoang Cao, 2010-07-17 In this volume first we formulate a framework of fuzzy types to represent both partial truth and uncertainty about concept and relation types in conceptual graphs Like fuzzy attribute values fuzzy types also form a lattice laying a common ground for lattice based computation of fuzzy granules Second for automated reasoning with fuzzy conceptual graphs we develop foundations of order sorted fuzzy set logic programming extending the theory of annotated logic programs of Kifer and Subrahmanian 1992 Third we show some recent applications of fuzzy conceptual graphs to modelling and computing with generally quantified statements approximate knowledge retrieval and natural language query understanding

Representation and Management of Narrative Information Gian Piero Zarri, 2009-06-29 A big amount of important economically relevant information is buried within the huge mass of multimedia documents that correspond to some form of narrative description Due to the ubiquity of these narrative resources being able to represent in a general accurate and effective way their semantic content i.e. their key meaning is then both conceptually relevant and economically important In this book we present the main properties of NKRL Narrative Knowledge Representation Language a language expressly designed for representing in a standardised way the meaning of complex multimedia narrative documents NKRL is a fully implemented language environment The software exists in two versions an ORACLE supported version and a file oriented one Written from a multidisciplinary perspective this

exhaustive description of NKRL and of the associated knowledge representation principles will be an invaluable source of reference for practitioners researchers and graduates

Conceptual Graphs for Knowledge Representation Guy W. Mineau, Bernard Moulin, 1993-07-14 Artificial Intelligence and cognitive science are the two fields devoted to the study and development of knowledge based systems KBS Over the past 25 years researchers have proposed several approaches for modeling knowledge in KBS including several kinds of formalism such as semantic networks frames and logics In the early 1980s J F Sowa introduced the conceptual graph CG theory which provides a knowledge representation framework consisting of a form of logic with a graph notation and integrating several features from semantic net and frame representations Since that time several research teams over the world have been working on the application and extension of CG theory in various domains ranging from natural language processing to database modeling and machine learning This volume contains selected papers from the international conference on Conceptual Structures held in the city of Quebec Canada August 4 7 1993 The volume opens with invited papers by J F Sowa B R Gaines and J Barwise
