Rebuilding Prairies and Forests Natalie Goldstein, 1994 Describes how ranchers in eastern Montana have joined together to start a huge preserve called the Big Open and how children have helped plant trees in communities throughout the country Prairies, Forests, and Wetlands Janette R. Thompson, 1992 **The Sunflower Forest** William R. Jordan, 2012-02-07 Ecological restoration the attempt to guide damaged ecosystems back to a previous usually healthier or more natural condition is rapidly gaining recognition as one of the most promising approaches to conservation In this book William R Jordan III who coined the term restoration ecology and who is widely respected as an intellectual leader in the field outlines a vision for a restoration based environmentalism that has emerged from his work over twenty five years Drawing on a provocative range of thinkers from anthropologists Victor Turner Roy Rappaport and Mary Douglas to literary critics Frederick Turner Leo Marx and R W B Lewis Jordan explores the promise of restoration both as a way of reversing environmental damage and as a context for negotiating our relationship with nature Exploring restoration not only as a technology but also as an experience and a performing art Jordan claims that it is the indispensable key to conservation At the same time he argues restoration is valuable because it provides a context for confronting the most troubling aspects of our relationship with nature For this reason it offers a way past the essentially sentimental idea of nature that environmental thinkers have taken for granted since the time of Emerson and Muir Prairie and Forest Parker Gillmore, 1874

Ignorance and Surprise Matthias Gross, 2021-08-03 The relationship between ignorance and surprise and a conceptual framework for dealing with the unexpected as seen in ecological design projects Ignorance and surprise belong together surprises can make people aware of their own ignorance And yet perhaps paradoxically a surprising event in scientific research one that defies prediction or risk assessment is often a window to new and unexpected knowledge In this book Matthias Gross examines the relationship between ignorance and surprise proposing a conceptual framework for handling the unexpected and offering case studies of ecological design that demonstrate the advantages of allowing for surprises and including ignorance in the design and negotiation processes Gross draws on classical and contemporary sociological accounts of ignorance and surprise in science and ecology and integrates these with the idea of experiment in society He develops a notion of how unexpected occurrences can be incorporated into a model of scientific and technological development that includes the experimental handling of surprises Gross discusses different projects in ecological design including Chicago's restoration of the shoreline of Lake Michigan and Germany's revitalization of brownfields near Leipzig These cases show how ignorance and surprise can successfully play out in ecological design projects and how the acknowledgment of the unknown can become a part of decision making The appropriation of surprises can lead to robust design strategies Ecological design Gross argues is neither a linear process of master planning nor a process of trial and

error but a carefully coordinated process of dealing with unexpected turns by means of experimental practice *EHR*
