Recent Contributions to Neurophysiology Pierre Gloor, Jean-Pierre Cordeau, 1972 **Recent contributions to neurophysiology** Jean-Pierre Cordeau, Pierre Gloor, 1972 Recent contributions to neurophysiology, 1972 Jasper's Basic Mechanisms of the Epilepsies Jeffrey Noebels, Massimo Avoli, Michael Rogawski, Richard Olsen, Antonio Delgado-Escueta, 2012-06-01 H H Jasper A A Ward A Pope and H H Merritt chair of the Public Health Service Advisory Committee on the Epilepsies National Institutes of Health published the first volume on Basic Mechanisms of the Epilepsies BME in 1969 Their ultimate goal was to search for a better understanding of the epilepsies and seek more rational methods of their prevention and treatment Since then basic and clinical researchers in epilepsy have gathered together every decade and a half with these goals in mind assessing where epilepsy research has been what it has accomplished and where it should go In 1999 the third volume of BME was named in honor of H H Jasper In line with the enormous expansion in the understanding of basic epilepsy mechanisms over the past four decades this fourth edition of Jasper's BME is the most ambitious yet In 90 chapters the book considers the role of interactions between neurons synapses and glia in the initiation spread and arrest of seizures It examines mechanisms of excitability synchronization seizure susceptibility and ultimately epileptogenesis It provides a framework for expanding the epilepsy genome and understanding the complex heredity responsible for common epilepsies as it explores disease mechanisms of ion channelopathies and developmental epilepsy genes It considers the mechanisms of conditions of epilepsy comorbidities And for the first time this 4th edition describes the current efforts to translate the discoveries in epilepsy disease mechanisms into new therapeutic strategies This book considered the bible of basic epilepsy research is essential for the student the clinician scientist and all research scientists who conduct laboratory based experimental epilepsy research using cellular brain slice and animal models as well as for those interested in related disciplines of neuronal oscillations network plasticity and signaling in brain structures that include the cortex hippocampus and thalamus In keeping with the 1969 goals the book is now of practical importance to the clinical neurologist and epileptologist as the progress of research in molecular genetics and modern efforts to design antiepileptic drugs cures and repairs in the epilepsies converge and impact clinical care **The Life Cycle of Psychological Ideas** Thomas C. Dalton, Rand B. Evans, 2006-01-03 This book focuses on what other volumes have only touched on that is the factors that contribute to the rise of certain persons and ideas in the field of psychology Bringing together noted experts in the field it describes the process of intellectual reconstructions that determines how we view historical events and why some ideas die only to be reborn again as well as why new ideas can quickly topple traditional views *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1972 First multi year cumulation covers six years 1965 70 **Neurotransmitters and Cortical Function** Massimo Avoli, Tomas A. Reader, Robert W. Dykes, Pierre Gloor, 2012-12-06

Herbert Henri Jasper is a scientist whose research activities have initiated and encompassed many of the major themes of neuroscience. He has pioneered in single unit recording, chronic neuronal studies, neurochemistry, electroencephalography, and many other disciplines. His students now hold important positions in universities and hospitals around the world. From July 21 to 23, 1986, a symposium entitled *Neurotransmitters and Cortical Function: From Molecules to Mind* was held in Montreal to honor Professor Jasper and to continue his pioneering efforts. The following chapters originated in that meeting. They summarize the current *status* of our knowledge in some of the fields influenced by Professor Jasper. They share a focus on neurotransmitters in cortical function where we presume higher mental events originate. Professor Jasper has made contributions to the understanding of three different classes of neurotransmitters: GABA, acetylcholine, and catecholamines. It is an interest in trying to link neurochemical events to some aspects of complex brain function and behavior that has characterized his work, and it is this philosophy that led to the present symposium to honor him. We dedicate this volume to Professor Jasper and the integrative approach that he has fostered.
