Evolutionary Cognitive Neuroscience Steven Platek, Julian Keenan, Todd Kennedy Shackelford, 2007 An essential reference for the new discipline of evolutionary cognitive neuroscience that defines the field's approach of applying evolutionary theory to guide brain behavior investigations Since Darwin we have known that evolution has shaped all organisms and that biological organs including the brain and the highly crafted animal nervous system are subject to the pressures of natural and sexual selection It is only relatively recently however that the cognitive neurosciences have begun to apply evolutionary theory and methods to the study of brain and behavior This landmark reference documents and defines the emerging field of evolutionary cognitive neuroscience Chapters by leading researchers demonstrate the power of the evolutionary perspective to yield new data theory and insights on the evolution and functional modularity of the brain Evolutionary cognitive neuroscience covers all areas of cognitive neuroscience from nonhuman brain behavior relationships to human cognition and consciousness and each section of *Evolutionary Cognitive Neuroscience* addresses a different adaptive problem After an introductory section that outlines the basic tenets of both theory and methodology of an evolutionarily informed cognitive neuroscience the book treats neuroanatomy from ontogenetic and phylogenetic perspectives and explores reproduction and kin recognition spatial cognition and language and self awareness and social cognition Notable findings include a theory to explain the extended ontogenetic and brain development periods of big brained organisms fMRI research on the neural correlates of romantic attraction an evolutionary view of sex differences in spatial cognition a theory of language evolution that draws on recent research on mirror neurons and evidence for a rudimentary theory of mind in nonhuman primates A final section discusses the ethical implications of evolutionary cognitive neuroscience and the future of the field Contributors C Davison Ankney Simon Baron Cohen S Marc Breedlove William Christiana Michael Corballis Robin I M Dunbar Russell Fernald Helen Fisher Jonathan Flombaum Farah Focquaert Steven J C Gaulin Aaron Goetz Kevin Guise Ruben C Gur William D Hopkins Farzin Irani Julian Paul Keenan Michael Kimberly Stephen Kosslyn Sarah L Levin Lori Marino David Newlin Ivan S Panyavin Shilpa Patel Webb Phillips Steven M Platek David Andrew Puts Katie Rodak J Philippe Rushton Laurie Santos Todd K Shackelford Kyra Singh Sean T Stevens Valerie Stone Jaime W Thomson Gina Volshteyn Paul Root Wolpe

Recent Developments in Alcoholism, 1995

Handbook of Drug Abuse Prevention Zili Sloboda, William J. Bukoski, 2007-08-06 There are a number of reasons why this book is important First there is no one source that summarizes what we know about the prevention of substance abuse from the research field so the book serves as a repository of accumulated knowledge on prevention theory intervention design and development and prevention research methodology Second as an evolving field prevention science has only begun to assert itself in both the arenas of practice and policy The formation of the Society for Prevention Research in 1991 was the first

recognition that a science of prevention existed and required a separate forum to present the rapidly growing content of the field for discussion and review Finally there is a need to establish a baseline a reference point against which progress in the field of prevention science can be assessed This book serves all of these purposes The idea for this book grew from the observation in the early 1990s that after decades of attempts to develop effective interventions to prevent drug use among children and adolescents in the United States that we were finally having success particularly in addressing the initiation of use These successes are the result of research that has provided a better understanding of the factors and processes associated with the onset of substance use

Substance Use Among Women Louis A. Pagliaro, Anne Marie

Pagliaro, 2013-01-11 There is increasing concern among all health and social care professionals about substance use among women Of particular concern is the consequence of substance use on the physical mental and social well being of women and also the repercussive effect on their children families and communities Substance Abuse Among Women speaks directly to the helping professionals and students trying to understand the various aspects of substance use among women and the crisis that it has become This comprehensive text is a compilation of theoretical empirical and clinical knowledge concerning key topics associated with substance use among women The early chapters provide an overview of the issues with attention to the nature and extent of substance use among women The text features a new empirically based assessment model developed by the authors as well as a variety of modern theories and treatment interventions Critical developmental issues including the toxic effects effects of substance use during and after pregnancy and the effects of substance use on healthy aging are included Many important issues are also explored including major depression and other mental disorders dual diagnosis sexual abuse and high risk lifestyles This useful and informative resource concludes with chapters devoted to strategies used in clinical practice These chapters rich in detail will enable readers to select and apply these strategies to their own clinical practice

The Consequences of Alcoholism Marc

Galanter, 2006-04-11 From the President of the Research Society on Alcoholism On behalf of the Research Society on Alcoholism I am pleased to introduce this 14th volume of Recent Developments in Alcoholism about the consequences of alcoholism Current concepts are presented in well organized sections that focus on the medical neuropsychiatric economic and biobehavioral consequences of alcoholism This volume contains up to date discussions of these issues The editors and associate editors should be congratulated for bringing together such important information This volume will be a valuable resource for investigators and therapists alike Ivan Diamond M D Ph D President Research Society on Alcoholism From the President of the American Society of Addiction Medicine On behalf of the American Society of Addiction Medicine I am pleased to announce that our society once again will cosponsor Recent Developments in Alcoholism This volume addresses the issues of age gender socioeconomy and behaviors as they relate to alcohol research and the disease of alcoholism The

medical consequences of alcoholism are ably edited by Dr Charles L. Ber while the neuropsychiatric consequences of alcoholism are addressed by Drs Gottheil. This volume is rounded out with the in depth discussion of the economic consequences of alcoholism edited by Dr Fuller and an international perspective on the behavioral consequences of alcoholism edited by Dr Paredes. *Recent Developments in Alcoholism* Marc Galanter, 2013-11-22 Each topic is covered in sufficient depth, currency and clarity to be of value to the neophyte and the seasoned researcher. *American Journal of Psychiatry* from a review of a previous volume. The current volume addresses a range of issues across this diverse field including the effects on society, physiology and biochemistry, clinical pathology and trends in treatment. **Drugs of Abuse and Addiction** Raymond Niesink, R.M.A. Jaspers, L.M.W. Kornet, J.M. van Ree, 1998-12-08 *Drugs of Abuse and Addiction: Neurobehavioral Toxicology* examines drugs of abuse and addiction and how they affect behavior. This book considers the entire range of addiction research in humans and animals using a multidisciplinary approach to discuss all areas of the neuro and behavioral sciences involved. Emphasis is on acute and chronic effect. **Recent Developments in Alcoholism** Marc Galanter, 2013-11-21 From the President of the American Society of Addiction Medicine. *Recent Developments in Alcoholism* Volume 10 is a major contribution to the literature of addiction medicine. This volume on alcohol and cocaine similarities and differences contains an impressive collection of chapters from the basic research, epidemiological and clinical research perspectives as well as articles that address the relative policy issues and clinical application and patient care concerns. It also sends a message to those who would still distinguish between alcohol and drugs or legal and illegal drugs. In the research laboratory, in the intentions and behavior of the user and by the clinician, such distinctions have never been upheld. The first section, Clinical Pathology, includes chapters on the role of alcohol in cocaine dependence, dual diagnosis, empirical and developmental, humanistic approaches and on neuroendocrine and catecholamine levels in humans during administration and withdrawal of cocaine and alcohol. Emergency room evaluation of cocaine associated neuropsychiatric disorders and clinical and pharmacological interactions of alcohol and cocaine. These chapters written by authors who are preeminent in their fields offer a broad perspective to both the researcher and the clinician on relevant issues in clinical pathology.

Psychotherapy of Cocaine Addiction David Mark, Jeffrey Faude, 1997 The widely accepted disease model of addiction overlooks the fact that helping addicts to change their lives is fundamentally an interpersonal and societal act because even the seemingly objective chemical effects of cocaine are inevitably integrated into a larger world of meanings and relationships. Addicts are demonized in our society and the consequences of their social alienation profoundly affect not only them but also their therapists and the process of therapy as well. Mark and Faude describe an approach to treating cocaine addiction whose centerpiece is learning to develop relationship episodes with the patient, concrete narratives of actual events in the patient's life. Sharing generous clinical examples, they demonstrate how engagement in this mutual activity illuminates and transforms the subjective interpersonal and cultural experience of the cocaine user. **Learning About Drinking** Eleni

Houghton, Anne M. Roche, 2013-05-13 This book is based on the premise that drinking behaviors are primarily learned. The contributors to the book explore the complex array of individual and social factors that impact the development of drinking patterns. They traverse family and culture influences and the role played by schools, government, and the beverage alcohol industry. Learning About Drinking offers a rigorous and scholarly examination of drinking behavior brought to life with illustrative cases drawn from around the world. Social policymakers, historians, anthropologists, public health specialists, as well as mental health professionals will find this book of value. Learning About Drinking offers a refreshing evidence-based look at a process that has too often been taken for granted. *Schizophrenia Bulletin*, 2006 *Alcohol Policy and the Public Good* Griffith Edwards, 1994 Written by seventeen of the world's leading researchers on alcohol problems and produced in collaboration with WHO, this book presents a critical and highly informed perspective on alcoholism and its management. It provides an appraisal of the nature and extent of society's alcohol problems and then explores how scientific findings assist in the design of more effective policy responses. Topics covered include international trends in alcohol consumption, understanding the relationships between alcohol consumption and multiple types of harm, both as regards individual drinking and population consumption. With the epidemiological evidence established, the text turns to a view of the efficacy of different types of prevention strategy, including pricing, licensing, and control of access, drunk driving counter measures, public education, and the treatment contribution. A final chapter succinctly outlines how these analyses are to assist in the making of informed policy choices. **Neurobiology of Addiction** George F. Koob, Michel Le Moal, 2005-11-11 Neurobiology of Addiction is conceived as a current survey and synthesis of the most important findings in our understanding of the neurobiological mechanisms of addiction over the past 50 years. The book includes a scholarly introduction, thorough descriptions of animal models of addiction, and separate chapters on the neurobiological mechanisms of addiction for psychostimulants, opioids, alcohol, nicotine, and cannabinoids. Key information is provided about the history, sources, and pharmacokinetics and psychopathology of addiction of each drug class, as well as the behavioral and neurobiological mechanism of action for each drug class at the molecular, cellular, and neurocircuitry level of analysis. A chapter on neuroimaging and drug addiction provides a synthesis of exciting new data from neuroimaging in human addicts, a unique perspective unavailable from animal studies. The final chapters explore theories of addiction at the neurobiological and neuroadaptational level, both from a historical and integrative perspective. The book incorporates diverse findings with an emphasis on integration and synthesis rather than discrepancies or differences in the literature. Presents a unique perspective on addiction that emphasizes molecular, cellular, and neurocircuitry changes in the transition to addiction. Synthesizes diverse findings on the neurobiology of addiction to provide a heuristic framework for future work. Features extensive documentation through numerous original figures and tables that will be useful for understanding and teaching.
