Nonlinear Partial Differential Equations Gui-Qiang Chen,Emmanuele DiBenedetto,1999 This volume is a collection of original research papers and expository articles stemming from the scientific program of the Nonlinear PDE Emphasis Year held at Northwestern University Evanston IL in March 1998 The book offers a cross section of the most significant recent advances and current trends and directions in nonlinear partial differential equations and related topics The book s contributions offer two perspectives There are papers on general analytical treatment of the theory and papers on computational methods and applications originating from significant realistic mathematical models of natural phenomena Also included are articles that bridge the gap between these two perspectives seeking synergistic links between theory and modeling and computation The volume offers direct insight into recent trends in PDEs This volume is also available on the Web Those who purchase the print edition can gain free access by going to www.ams.org/conm *Recent Trends in Nonlinear Partial Differential Equations I* James B. Serrin,Enzo L. Mitidieri,Vicențiu D. Rădulescu,2013-07-22 This book is the first of two volumes which contain the proceedings of the Workshop on Nonlinear Partial Differential Equations held from May 28 June 1 2012 at the University of Perugia in honor of Patrizia Pucci s 60th birthday The workshop brought t *New Numerical and Analytical Methods for Nonlinear Partial Differential Equations with Applications in Quantum Physics* Mustafa Inc,Xiao-Jun Yang,Devendra Kumar,2023-11-20 Various numerical and analytical methods have been used to investigate the models of real world phenomena Namely real world models from quantum physics have been investigated by many researchers This Research Topic aims to promote and exchange new and important theoretical and numerical results to study the dynamics of complex physical systems In particular the Research Topic will focus on numerical and analytical methods for nonlinear partial differential equations which have applications for quantum physical systems Authors are encouraged to introduce their latest original research articles The Research Topic will cover but is not limited to the following themes Mathematical methods in physics Representations of Lie groups in physics Quantum fields Advanced numerical methods and techniques for nonlinear partial differential equations Schr dinger classical and fractional operators Conservation laws **Selected Topics in the Geometrical Study of Differential Equations** Niky Kamran,2002-01-01 The geometrical study of differential equations has a long and distinguished history dating back to the classical investigations of Sophus Lie Gaston Darboux and Elie Cartan Currently these ideas occupy a central position in several areas of pure and applied mathematics In this book the author gives an overview of a number of significant ideas and results developed over the past decade in the geometrical study of differential equations Topics covered in the book include symmetries of differential equations and variational problems the variational bi complex and conservation laws geom **Recent Advances in Harmonic Analysis and Partial Differential Equations** Andrea R. Nahmod,2012 This volume is based on the AMS Special Session on Harmonic Analysis and Partial Differential Equations and the AMS Special Session on Nonlinear Analysis

of Partial Differential Equations both held March 12-13 2011 at Georgia Southern University Statesboro Georgia as well as the JAMI Conference on Analysis of PDEs held March 21-25 2011 at Johns Hopkins University Baltimore Maryland These conferences all concentrated on problems of current interest in harmonic analysis and PDE with emphasis on the interaction between them This volume consists of invited expositions as well as research papers that address prospects of the recent significant development in the field of analysis and PDE The central topics mainly focused on using Fourier spectral and geometrical methods to treat wellposedness scattering and stability problems in PDE including dispersive type evolution equations higher order systems and Sobolev spaces theory that arise in aspects of mathematical physics The study of all these problems involves state of the art techniques and approaches that have been used and developed in the last decade The interrelationship between the theory and the tools reflects the richness and deep connections between various subjects in both classical and modern analysis

Partial Differential Equations and Mathematical Physics Lars

Hörmander, Anders Melin, 2013-04-17 On March 17-19 and May 19-21 1995 analysis seminars were organized jointly at the universities of Copenhagen and Lund under the heading Danish Swedish Analysis Seminar The main topic was partial differential equations and related problems of mathematical physics The lectures given are presented in this volume some as short abstracts and some as quite complete expositions or survey papers They span over a large variety of topics The most frequently occurring theme is the use of microlocal analysis which is now important also in the study of non linear differential equations although it originated entirely within the linear theory Perhaps it is less surprising that microlocal analysis has proved to be useful in the study of mathematical problems of classical quantum mechanics for it received a substantial input of ideas from that field The scientific committee for the invitation of speakers consisted of Gerd Grubb in Copenhagen Lars Hörmander and Anders Melin in Lund and Johannes Sjöstrand in Paris Lars Hörmander and Anders Melin have edited the proceedings They were hosts of the seminar days in Lund while Gerd Grubb was the host in Copenhagen Financial support was obtained from the mathematics departments in Copenhagen and Lund CNRS in France the Danish and Swedish National Research Councils Gustaf Sigurd Magnuson's foundation at the Royal Swedish Academy of Sciences and the Wenner Gren foundation in Stockholm We want to thank all these organisations for their support

Integrable Hamiltonian

Hierarchies Vladimir Gerdjikov, Gaetano Vilasi, Alexandar Borisov Yanovski, 2008-06-02 This book presents a detailed derivation of the spectral properties of the Recursion Operators allowing one to derive all the fundamental properties of the soliton equations and to study their hierarchies

Control Methods in PDE-Dynamical Systems Fabio Ancona, 2007 While rooted in controlled PDE systems this 2005 AMS IMS SIAM Summer Research Conference sought to reach out to a rather distinct yet scientifically related research community in mathematics interested in PDE based dynamical systems Indeed this community is also involved in the study of dynamical properties and asymptotic long time behavior in particular stability of PDE mixed problems It was the editors conviction that the time had become ripe and the circumstances propitious for these

two mathematical communities that of PDE control and optimization theorists and that of dynamical specialists to come together in order to share recent advances and breakthroughs in their respective disciplines This conviction was further buttressed by recent discoveries that certain energy methods initially devised for control theoretic a priori estimates once combined with dynamical systems techniques yield wholly new asymptotic results on well established nonlinear PDE systems particularly hyperbolic These expectations are now particularly well reflected in the contributions to this volume which involve nonlinear parabolic as well as hyperbolic equations and their attractors aero elasticity elastic systems Euler Korteweg models thin film equations Schrodinger equations beam equations etc in addition the static topics of Helmholtz and Morrey potentials are also prominently featured A special component of the present volume focuses on hyperbolic conservation laws to take advantage of recent theoretical advances with significant implications also on applied problems in all these areas the reader will find state of the art accounts as stimulating starting points for further research

Nonlinear Functional Analysis and Its Applications, Part 1 Felix E. Browder, 1986 **Perspectives in Nonlinear Partial Differential Equations** Henri Berestycki, 2007 In celebration of Haim Brezis's 60th birthday a conference was held at the Ecole Polytechnique in Paris with a program testifying to Brezis's wide ranging influence on nonlinear analysis and partial differential equations The articles in this volume are primarily from that conference They present a rare view of the state of the art of many aspects of nonlinear PDEs as well as describe new directions that are being opened up in this field The articles written by mathematicians at the center of current developments provide somewhat more personal views of the important developments and challenges
