Research: Classic Origins and Current Concepts A. L. Muggleton-Harris, 2013-10-15 *Membrane Research Classic Origins and Current Concepts* is a special volume of the *International Review of Cytology* dedicated to Dr Danielli on the occasion of his retirement from official duties The central theme of the volume is membranes The diversity of topics ranges from the biogenesis of membranes and their components to the use of optical and lectin probes as a means to study the structure physiology and interactions of cell components and organelles in plant and animal systems The book begins with a study on the cell surface of the mammalian embryo and the events associated with the formation of the differentiated blastocyst This is followed by separate chapters on the structural associations between the inner and outer bacterial membrane the interactions of cell wall and membrane in plant cells the morphological and functional aspects of membranes and methods for

studying the physiology of cell and organelles at the membrane level Subsequent chapters deal with the synthesis of cellular proteins and glycoproteins techniques for fixing and preserving the ultrastructure of the membrane the synthesis of artificial organelles and the effects of drugs and chemicals on membrane transport utilizing kidney tissue and vesicles This book provides an outstanding reference source for all scientific researchers and teachers **Proceedings of the Sixth**

Structure, Dynamics, Interactions and Evolution of Biological Macromolecules C. Helene, 2012-12-06

Proceedings of a Colloquium held at Orlans France July 5 9 1982 *Contemporary Topics in Immunobiology* John J. Marchalonis, 2012-12-06 The problem that virtually all cells have in discriminating between self and non self molecules and cells has been considered at great length in immunobiology However cells that clearly are incapable of carrying out mammalian type immune functions can exhibit exquisite specificity in their capacity to discriminate among syngeneic allogeneic and xenogeneic cells In this volume of Contemporary Topics in Immunobiology we have chosen to consider the general problem of self non self discrimination as it is manifest in recognition reactions of plants and invertebrates and in the evolutionary development of the immune response of vertebrates A broad many faceted approach is taken toward fundamental issues in immunobiology in order to develop innovative concepts of receptor function as well as to delineate traditional views The capacity of plants to discriminate between self and non self is addressed in Chapter 1 by R B Knox and Adrienne E Clarke These authors provide examples of cell cell recognition in plants that parallel those occurring in vertebrates and invertebrates In general tolerance acceptance of grafts is restricted to plants within closely related genera Recognition is mediated by callus cells which proliferate at wound surfaces in higher plants and there is a correlation between cell and tissue type and antigenic markers detectable with the use of mammalian antibodies Certain flowering plants exhibit precise discrimination in fertilization when pollen must be from the same species but fertilization occurs only if the pollen is genetically non self **Toward Anti-Adhesion Therapy for Microbial Diseases** Itzhak Kahane, Itzhak Ofek, 2012-12-06

The emergence of pathogens resistant to conventional antimicrobial agents has forced us to intensify the efforts in search for new approaches to prevent infectious diseases Such a direction was indicated in studies over the last two decades showing that adhesion of pathogens primarily via glycoconjugate or protein receptors of the host tissue is crucial for the infectious process Moreover it was found that infection can be prevented by blocking adhesion of the pathogen to mucosal surfaces of the host The various aspects of interference with the process of microbial adhesion as a way of preventing diseases were the subject of the Bat Sheva Seminar Towards Anti Adhesion Therapy of Microbial Infectious Diseases held in Zichron Yaakov Israel February 25 to March 1 1996 A major aim of the Bat Sheva de Rothschild Foundation for the Advancement of Science in Israel which sponsors a series of seminars ours among them is to provide the necessary

tools and settings for international forums and exposure of young scientists and promising students to the state of the art of the field This goal has been achieved during the week s discussions and its major aspects are presented in this compendium The seminar s participants as well as the readers of this book thank the founder and Foundation for their support This book includes the major themes of this rapidly growing area However by no means do we intend to cover every bit and piece in it The book s first section deals with the lectin sugar interactions and their inhibitors

Protein Conformation as an Immunological Signal Franco Celada, Verne N. Schumaker, Eli E. Sercarz, 2012-12-06 This volume is the collection of papers presented during a four day meeting the EMBO workshop Protein Conformation as an Immunological Signal that took place at Portovenere La Spezia Italy October 1 4 1981 The motivation that drove us to organize this meeting was the feeling that distinct groups of researchers active in key areas of modern immunology sometimes fail to communicate with each other simply because of different traditional affiliations Yet it is urgent that molecular and cellular people cooperate more if immunology is to continue the exportation of new concepts to other disciplines In fact the deep meaning of molecule molecule and cell cell interaction the generation of signals and their effective transmission which results in elicitation control or suppression of responses cannot be unraveled without the experts on antibody structure or complement activation sharing their views with the experts on T cell B cell and macrophage membrane receptors as well as the experts on factors that carry the information released by these cells Whether the meeting was scientifically fruitful the reader can judge after having digested these pages We the organizers are not sure whether the optimal amount of interaction had taken place especially considering how hard it is to overcome the scientist s catch 22 You have to know something quite well before you get really interested in it In any event we are convinced that Portovenere was one of the most successful attempts we have witnessed
