Friedrich Kuehn The Federal Institute for Geosciences and Natural Resources BGR Germany in cooperation with scientists from universities research institutes and industry has characterized waste disposal sites in Germany The work was commissioned by the Federal Environmental Agency Umweltbundesamt and funded by the German Federal Ministry for Education Science Research and Technology BMBF as a joint research study called Methods for the Investigation and Characterization of the Ground below Waste Disposal Sites

The primary objective of the study was to increase the understanding of the subsurface characteristics of waste disposal sites using geologic and geophysical methods The work focused on determination of the thickness and physical chemical properties of the lining and underlying rocks and identification of potential migration paths for fluids in the vicinity of disposal sites

This handbook *Remote Sensing for Site Characterization* is the first in a series of planned publications under the general title *Methods in Environmental Geology* It is based on the German edition Kuehn and Hoerig 1995 which has been considerably expanded by the addition of sections by U.S. and Canadian scientists This volume illustrates the use of theoretical and technical aspects of airborne and satellite based methods in the study of waste sites and gives examples of their applications
