Robinson, 1985-02-13 **Knowledge Acquisition for Expert Systems** A. Kidd, 2012-12-06 Building an expert system involves eliciting analyzing and interpreting the knowledge that a human expert uses when solving problems Experience has shown that this process of knowledge acquisition is both difficult and time consuming and is often a major bottleneck in the production of expert systems Unfortunately an adequate theoretical basis for knowledge acquisition has not yet been established This requires a classification of knowledge domains and problem solving tasks and an improved understanding of the relationship between knowledge structures in human and machine In the meantime expert system builders need access to information about the techniques currently being employed and their effectiveness in different applications The aim of this book therefore is to draw on the experience of AI scientists cognitive psychologists and knowledge engineers in discussing particular acquisition techniques and providing practical advice on their application Each chapter provides a detailed description of a particular technique or methodology applied within a selected task domain The relative strengths and weaknesses of the technique are summarized at the end of each chapter with some suggested guidelines for its use We hope that this book will not only serve as a practical handbook for expert system builders but also be of interest to AI and cognitive scientists who are seeking to develop a theory of knowledge acquisition for expert systems **Current Catalog** National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965 70

**Environmental Health Perspectives** , **Urinary Enzymes** Klaus Jung, Hermann Mattenheimer, Ulf Burchardt, 2012-12-06 Interest and research in urinary enzymology were incited about three decades ago by reports that urinary enzymes are elevated in diseases of the kidney and urinary tract Of the more than 40 hydrolases oxidoreductases transferases and lyases identified in human and animal urine only ten or so are being used as diagnostic indicators Recognition of the quantitative distribution of enzymes in the various anatomical and functional parts of the nephron and advances in our understanding of the handling of proteins by the kidney have made it possible to associate urinary enzyme activity patterns with physiological and pathophysiological functions of the nephron Confidence in the diagnostic value of urinary enzymes is not unanimous among clinicians and among scientists The main reason for the difference in opinion may well be that the variability in data exceeds the variability

one is accustomed to in the diagnostic enzymology of blood plasma enzymes In contrast to plasma enzymes which are protected by an enzyme friendly milieu enzymes released into the urine encounter an enzyme hostile environment no or little protective protein variable pH variable volume variable metabolite and salt concentrations variable concentrations of enzyme inhibitors Through advances in methodology some of these factors can now be controlled standardization of urine collection periods and preanalytical treatment are as important as optimization of assay methods *Selectivity and Molecular Mechanisms of Toxicity* Francesco De Matteis, Edward A. Cowett, 2012-12-06 Over the last quarter century or so specialization within obstetrics and gynecology and pediatrics has resulted in the development of the disciplines of maternal fetal medicine and neonatology respectively A primary focus of maternal fetal medicine has been to understand the mechanisms of premature delivery and develop treatment modalities for improving the length of gestation A primary focus of neonatology has been to understand the causes of respiratory distress in the neonate Success has resulted not only in the lengthening of gestation but an improved understanding of the causes and treatment of neonatal respiratory disease With increasing success has come the necessity to understand the metabolic principles of the parturient the fetal placenta unit and the neonate These principles are clearly very important from multiple aspects Increased understanding of metabolism of the pregnant woman would explain the aberrations occurring in normal and abnormal pregnancy and improve nutritional support for the parturient A prime example of altered metabolism is the parturient with diabetes Understanding metabolism of the fetal placenta unit is necessary to increase the probability that the fetus will be born appropriate for size irrespective of the gestational age The various components of neonatal metabolism are important not only for understanding the changes in physiology and biochemistry occurring in the developing neonate but the principles by which nutritional support should be provided **Hospice Education Program for Nurses: Facilitator manual**, 1981 Nephrotoxicity in the experimental and clinical situation P.H. Bach, E.A. Lock, 2012-12-06 *Microcirculation and Tubular Urine Flow in the Mammalian Kidney Cortex (in vivo Microscopy)* M. Steinhausen, G.A. Tanner, 2012-12-06 The surface of the kidney presents a unique opportunity to study fundamental processes in the living animal Here blood vessels and kidney tubules are accessible to direct microscopic observation This situation has been used to elucidate kidney functions under normal and pathological conditions A number of observations on function in the intact kidney can be made through the microscope We can observe the flow of blood in the renal microcirculation on the cortical surface We can identify proximal and distal tubules and measure their widths We can follow the flow of tubular fluid with the use of dyes We can watch fluid reabsorption in tubular segments isolated by oil droplets With photography these observations can be recorded and quantitated In this monograph we will

survey the methods and results of in vivo microscopy of the kidney cortex We will consider the advantages and limitations of these methods and discuss their contributions to our understanding of kidney physiology A general discussion of kidney function may be found in Ref 127 The reader is also referred to several recent reviews and books on the kidney 28 41 43 66 72a 84 95 120 128 136 140 194 203 204 210 216     The Handbook of Surgical Intensive Care H.
