Mathematics Classes Kenneth E. Brown, 1953 *The River Mathematics. (The Development of Mathematical Ideas and Processes.)* Alfred Hooper, 1951 *Expertise in Mathematics Instruction* Yeping Li, Gabriele Kaiser, 2010-12-15 Accumulated research findings in past decades have led to the common knowledge that teachers professional knowledge is essential to effective classroom instruction. However, there is still very limited understanding about the nature of teachers expertise in mathematics instruction. *Expertise in Mathematics Instruction* addresses this need clearly and concisely. In particular, it examines all aspects of emphases employed to characterize the nature of expertise in mathematics instruction from both researchers and practitioners perspectives. Moreover, with research contributions from both the East and the West, this book also examines ideas pertinent to fostering and demonstrating expertise in mathematics instruction within different system contexts. This book will raise questions and issues for mathematics education researchers to guide a critical examination of what can be learned from other education systems. *Expertise in Mathematics Instruction* builds on its theoretical and methodological approach with contributions from international experts in the field. Additionally, a review of related research from mathematics education serves as an introduction to the new research in both Eastern and Western settings. Concluding this resource is a reflection on the benefits of this international collaboration and possible research directions for the future. The final chapter cohesively joins traditional and current research for action. *Expertise in Mathematics Instruction* is of interest to researchers in mathematics education, mathematics teacher educators and mathematics educators. **The**

Muslim Contribution to Mathematics Ali Abdullah Al-Daffa', 2020-09-10 This book first published in 1977 discusses the Muslim contribution to mathematics during the golden age of Muslim learning from the seventh to the thirteenth century. It was during this period that Muslim culture exerted powerful economic, political, and religious influence over a large part of the civilised world. The work of the Muslim scholars was by no means limited to religion, business, and government. They researched and extended the theoretical and applied science of the Greeks and Romans of an earlier era in ways that

preserved and strengthened man's knowledge in these important fields Although the main object of this book is to trace the history of the Muslim contribution to mathematics during the European Dark Ages some effort is made to explain the progress of mathematical thought and its effects upon present day culture Certain Muslim mathematicians are mentioned because of the important nature of their ideas in the evolution of mathematical thinking during this earlier era Muslim mathematicians invented the present arithmetical decimal system and the fundamental operations connected with it addition subtraction multiplication division raising to a power and extracting the square root and the cubic root They also introduced the zero symbol to Western culture which simplified considerably the entire arithmetical system and its fundamental operations it is no exaggeration if it is said that this specific invention marks the turning point in the development of mathematics into a science
